SUMMARY

At a glance

Procureline runs every purchase in your organisation from the request to the supplier's payment, with your procurement rules built in. This manual is for the people who bring it into use: what must be true before anyone buys through it, how to set the organisation up, how to pilot, and how to go live without losing a purchase on the way.

4
Stages: prepare, pilot, go live, settle in

8
Infrastructure items that gate everything

12
Steps on the launch checklist

6
Exit tests before the pilot is called a pass

Product	Procureline, a procurement and stores system used in a web browser, at **www.procureline.co.zw**
Your address	Each organisation has its own address under the Procureline domain, with its own private data
Who launches it	An administrator who coordinates; the technical team for the infrastructure; Finance and the COO for the approval limit; Procurement for suppliers; Stores for stock; every role for its own training
Before anything	Own accounts, a tested backup, real email, two-factor sign-in, the hourly jobs scheduled (Part 1)
Set-up	Sites, departments, users, the approval limit, the audit log (Part 2)
The process	Eight roles, twenty steps and seven enforced controls (Part 3)
Day-to-day use	The **User Manual**, one part per role, with numbered steps and screenshots
Help	Part 4: common problems and the glossary

Who should read what

IF YOU ARE	READ
Coordinating the launch	All of this manual
The technical team	Parts 1 and 2
The administrator	Parts 1 and 2, then the User Manual's administration part
Finance or the COO	1.3 (the approval limit), 1.4 and 2.4

IF YOU ARE	READ
Procurement	1.3 and 1.6, then the User Manual's supplier parts
Training the staff	1.6, then the User Manual

How to read the steps

- **Organisation › Staff Team** is a menu path: open **Organisation** in the left-hand menu, then click **Staff Team**.
- `Add User` is a button or link exactly as labelled on screen.
- Numbered steps are done in order. The grey line after a procedure says what you should see when it has worked.
- References such as *User Manual 4.3* point to the numbered section of the User Manual.

PART 1

Launch

An organisation is live when real requisitions start in Procureline and the old paper process is kept only as a fallback. Launch runs in four stages behind one infrastructure gate. Nothing here is optional: each item is there because its absence costs real money.

1.1 The four stages

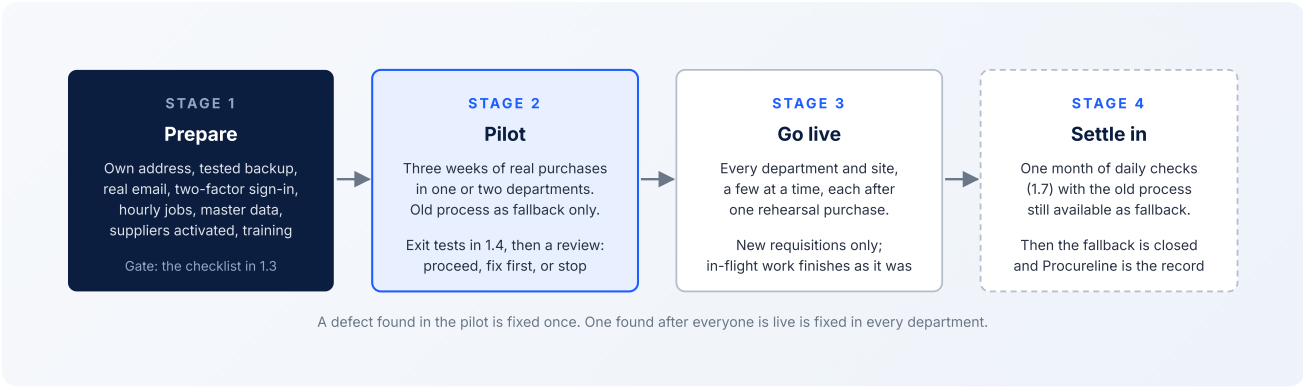

Figure The four stages of a launch. Each stage ends with a decision that is written down.

1.2 Prepare: the infrastructure gate

Nothing starts until these are done and signed off. Until two-factor sign-in is on, anyone who knows an email address and password can act as that person, Finance included. That is acceptable for testing and not for live purchasing.

#	TASK	OWNER	DONE WHEN
1	The organisation owns its domain, its database account, its hosting account and its email-sending account. Nothing is on a personal account	IT, technical team	Each account is held by the organisation and has two administrators
2	Database backups run daily with a copy kept elsewhere, and a restore has been performed into a scratch environment and timed	Technical team	A restore has actually been done, not only configured
3	Procureline answers at the organisation's own address over HTTPS	Technical team	The address opens the sign-in page with a valid certificate
4	Real email sending is switched on, and the address used in email links is correct	Technical team	A notification email links to a working page
5	Two-factor sign-in is on: a real six-digit code is required by email	Technical team	Sign-in cannot complete without the emailed code

#	TASK	OWNER	DONE WHEN
6	The hourly alert jobs are scheduled on the hosted API	Technical team	A scheduler calls the secured jobs endpoint every hour and the audit log shows it ran
7	Suppliers imported from an older register have their permanent supplier codes	Technical team	Every supplier in the list shows a code such as `ORG-SUP-00001`
8	A separate test environment exists, so testing never touches live data	Technical team	Testers sign in somewhere other than the live address

Exit test. An administrator signs out, requests a password reset, receives the email, sets a new password, and signs back in with a real emailed code, at the organisation's own address.

Why the hourly jobs matter. The hosted API runs as serverless functions, which have no internal clock. Without the scheduler, nobody is reminded of overdue approvals, expiring supplier documents, low stock or an RFQ closing short of three quotes. The controls still hold (an expired required document blocks an award by itself) but the warnings do not go out.

1.3 Launch checklist

The organisation works through this list before its first real requisition. The administrator coordinates; the owner column says who does each step.

#	STEP	OWNER	SEE
1	Confirm the address opens over HTTPS and shows the organisation's name	Technical team	User Manual Part 1
2	Clear any test data from the live organisation	Technical team	1.2
3	Create the administrator with a real email address and a real password	Technical team	Part 2
4	Create sites, then departments, naming each department's head and deputy	Administrator	2.1, 2.2
5	Create users, at least one per role, each with a real email address	Administrator	2.3
6	**Confirm the COO limit and the approval chain match your real delegation of authority.** Have the limit and, for a non-USD organisation, the exchange rate set	Finance, COO	2.4
7	Onboard suppliers: create or import them, complete KYS, submit each for activation, and have the Head of Procurement or the COO approve	Procurement, Head of Procurement	User Manual Part 6, User Manual 7.4

#	STEP	OWNER	SEE
8	Load the item catalogue and opening stock balances per site	Stores	User Manual 4.5
9	Set the annual budget for each department	Finance	User Manual 8.4
10	Train each role on your own data, using the plan in 1.6	Business	the User Manual
11	Run one complete rehearsal purchase from requisition to payment, including an order above the COO limit	All roles	3.2
12	Confirm that a session from another organisation's address is refused and that no other organisation's data is visible	Technical team	User Manual 1.1

Step 6 is the one most often skipped and the most expensive to find later. The system enforces the limit it is given, faithfully. If your real authority limits differ from the default of USD 5,000, it will enforce the wrong rule on real money.

1.4 Pilot and exit tests

Run the pilot with real people and real purchases in one or two departments for three weeks. The old process stays available as a fallback but is not run in parallel: doing both doubles the work and guarantees neither is trusted. The pilot has passed when all of these are true.

#	EXIT TEST	EVIDENCE
1	At least ten real requisitions have reached payment	Payments list
2	At least one order above the COO limit has passed every approval stage	The order's approval history
3	At least one invoice has been correctly refused for goods not receipted	The rejected invoice and its reason
4	Stock figures agree with a physical count	Inventory against the count sheet
5	Finance confirms the budget figures match its own records	Budgets page
6	No unresolved issue rated urgent	The issue list

Then hold a review with the results in front of you. Proceed, proceed after fixes, or stop. Write down which and why.

1.5 Cutover and fallback

Cutover is per department or site

A department switches when its rehearsal purchase passes. From that day, its new requisitions are raised only in Procureline.

In-flight work stays where it started

Purchases already under way finish in the old process. Moving half-finished purchases is more error-prone than letting them drain.

Fallback for one month

The old process stays available for that department alone. The trigger is a defect that stops purchasing with no workaround within a day.

Decide and record

After each stage, review the exit-test results. Proceed, proceed after fixes, or stop. Write down which and why.

1.6 Training

One session per role. Use your own suppliers, items and departments, never sample data. Each session ends with the trainee doing the task alone.

AUDIENCE	LENGTH	COVERS	PART
End users	15 min	Sign in; raise a requisition; track it; collect goods from stores; read notifications	2, 4
Department heads	30 min	Approve and reject requisitions; the budget check; Team and My requisitions	4
Stores	45 min	Stock review; issuing; GRV; accept and reject deliveries; inventory and transfers	5
Procurement	60 min	Accept requisitions; RFQs; quotations; waiver; award; orders; supplier onboarding and KYS; bank changes; evaluations	6, 7
Head of Procurement	30 min	Authorise awards; approve orders; approve, return or reject supplier activations	8
Finance	45 min	Approve orders; three-way match; invoices; payments; budgets	9
COO	15 min	Approve orders above the limit; waivers; supplier activations; what the dashboard shows	8
Administrators	30 min	Users, departments, sites, settings, audit log	10
Suppliers	20 min	Register; upload KYS documents; quote; acknowledge orders; invoice; bank changes	11

Supplier training is the one usually forgotten. Suppliers who cannot quote get chased by telephone, and the three-quotation control quietly lapses. Invite suppliers to register before launch and check that each has signed in at least once.

1.7 The first weeks after launch

During the fallback month, the administrator and the Head of Procurement check these once a day. Each takes a minute.

CHECK	WHERE	IF IT IS WRONG
Nothing overdue in approvals	**Approvals** and **Sign-offs › Authorizations**; overdue items are marked	Chase the approver. If they are away, the administrator names a deputy on the department
Every open RFQ has at least three invited suppliers who can sign in	**Sourcing › RFQs**	Invite more suppliers, or help the invited ones register (User Manual Part 10)
No supplier waiting more than a day for activation approval	**Suppliers › All Suppliers**, filter **Awaiting approval**	Ask the Head of Procurement or the COO to approve or return it (User Manual 7.4)
Deliveries have GRVs and invoices are matched	**Receiving › Deliveries (GRV)**, **Payables › Invoices**	An invoice with no GRV cannot be approved; ask Stores to receive the goods first
Stock agrees with the shelves	**Stock › Inventory**	Record the movement that was missed; never edit the balance
The audit log shows the hourly jobs running	**Oversight › Audit Logs**	Tell the technical team; the scheduler has stopped

PART 2

Administration

The administrator sets the organisation up in Procureline and keeps it tidy: sites, departments, users and their roles, and the audit log. The administrator cannot carry out any business step, which is what makes the audit log trustworthy.

Your dashboard. A system overview, recent activity, and attention rows for suppliers, KYS, evaluations due, low stock and failed sign-ins.

2.1 Sites

Create sites first, because departments, stock and deliveries refer to them. Open **Organisation › Sites** and click **Add site**: a short **Code** (such as `HQ`, locked once saved), the **Type** (HQ or Site), **Name**, city and province, and tick **Has local store inventory** for any site that holds its own stock. Stock transfers (User Manual 4.6) move stock between sites that have inventory.

2.2 Departments

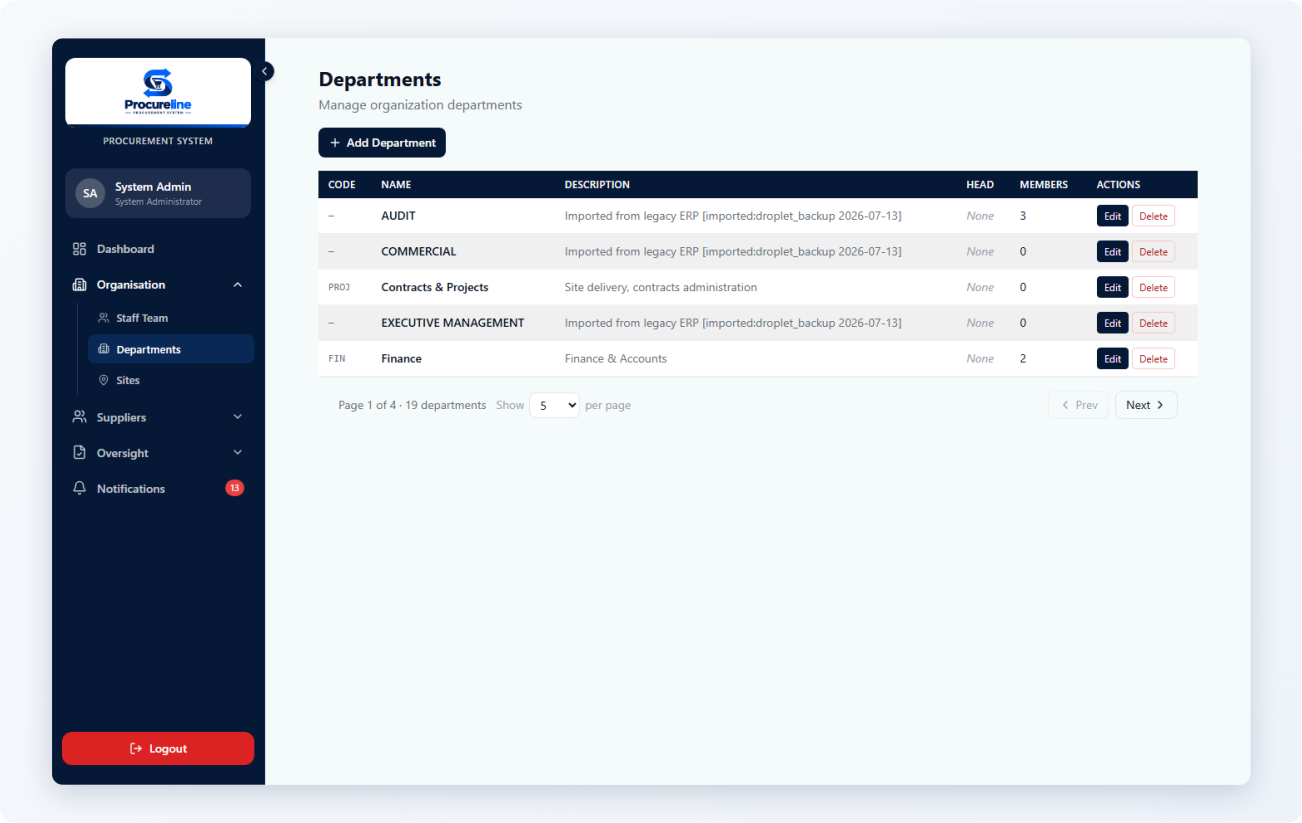

Figure Departments: code, name, head and members; Add Department opens the form.

Open **Organisation › Departments** and click **Add Department**: **Department Name** (required), a short **Department Code**, a description, the **Department Head** and a **Deputy HOD**. Both lists offer only users with

the Department Head role, so create those users first (2.3) or come back and edit. The deputy can approve the department's requisitions when the head is away; name one for every department so approvals never stall. Create a department called **Procurement**: its head is the Head of Procurement.

2.3 Staff Team (users)

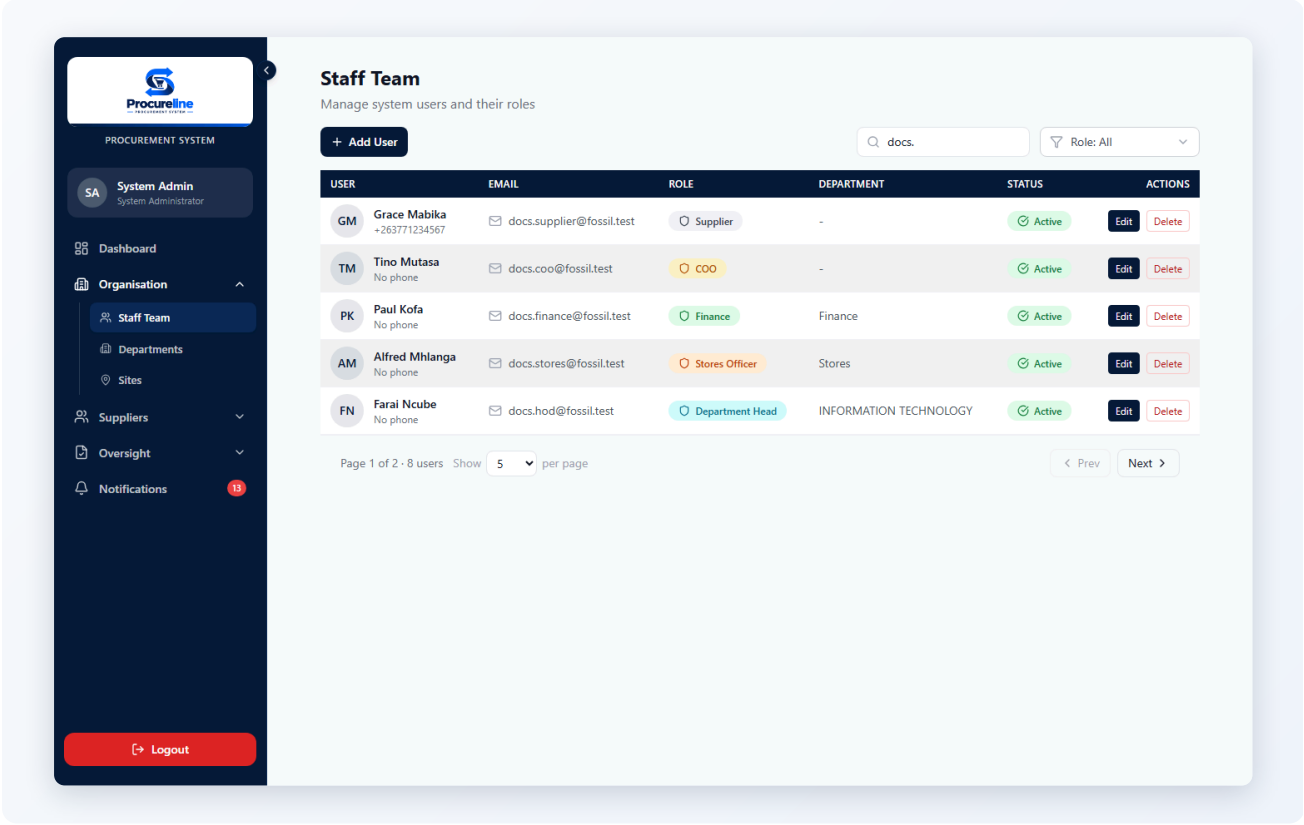

Figure Staff Team: each user with role, department and status; Add User opens the form.

1. Open **Organisation › Staff Team** and click **Add User**.
2. Enter **First Name**, **Last Name** and **Email**. Use the person's real work address: sign-in codes and every notification go there, and the email cannot be changed later. Set a **Password** of at least 6 characters and confirm it; the user should change it at first sign-in.
3. Choose the **Role**: Admin, Procurement Officer, Department Head, End User, Finance, COO or Stores Officer. Set the **Department** for everyone who raises or approves requisitions; a Department Head whose department is Procurement becomes the **Head of Procurement**, with full procurement access plus award authorisation and waiver approval. Add a phone number and leave **Status** as Active.
4. Click **Create User**.

   Toast **User created successfully**. The user signs in at your organisation's address (User Manual 1.2). To change a role or deactivate someone, click **Edit**; set **Status** to Inactive or Suspended rather than deleting, so their history stays attributed. Supplier logins are not created here; suppliers register themselves or are created by Procurement (User Manual 6.1).

> **One person, one role.** Give nobody two logins to get around a control. The two-person rules (awards, bank changes, activations) assume the submitter and the approver are different people, and the audit log records the account, not the person at the keyboard.

2.4 Organisation settings

Open your profile from the card above the menu. The panel **Business unit settings** (Procureline's name for an organisation's settings) shows the organisation's code, country, base currency, the **COO approval limit** with the exchange rate it is applied at, and the document branding (legal name, VAT number, address, logo) printed on orders. These are read-only here; changes to the currency, limit, exchange rate or branding are made by the Procureline operators. Before launch, confirm the limit matches your delegation of authority (step 6 of the checklist). The warning *No exchange rate on file — every PO routes to the COO* means exactly that for an organisation whose currency is not USD.

2.5 Audit log and evidence pack

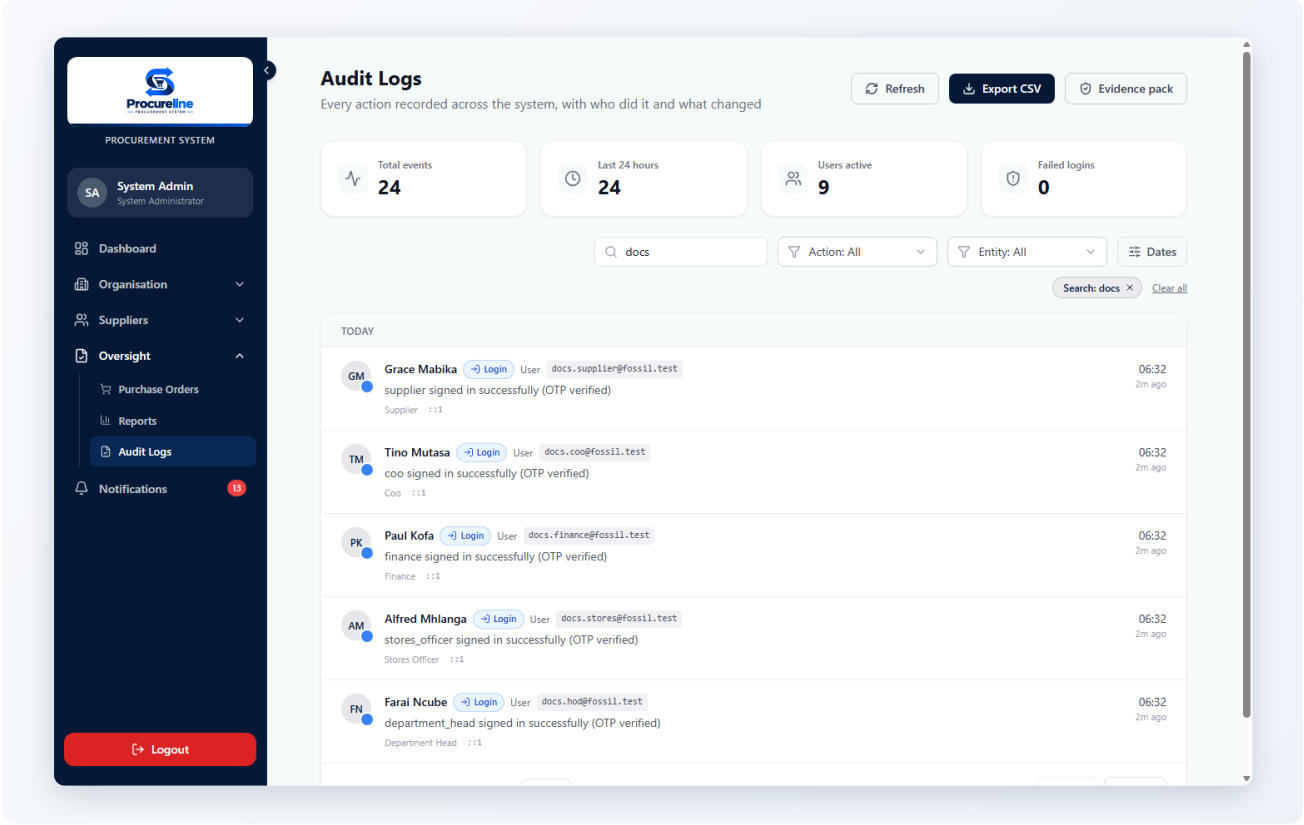

Figure Audit Logs: every action with who did it, filtered by action, entity and date; Export CSV and Evidence pack at the top.

Oversight › Audit Logs records every sign-in, failed sign-in, create, update, delete, approval, rejection, submission, upload and download, with the user, role, time, IP address and the fields that changed. Search by description, user or IP; filter by action, entity and date. Click an entry for **Audit Log Details**, including before and after values. `Export CSV` exports the filtered list; `Evidence pack` produces the controls evidence for auditors for the date range (default the last twelve months). Check the log daily during the first weeks (1.7); the hourly jobs appear in it when they run.

2.6 Reports

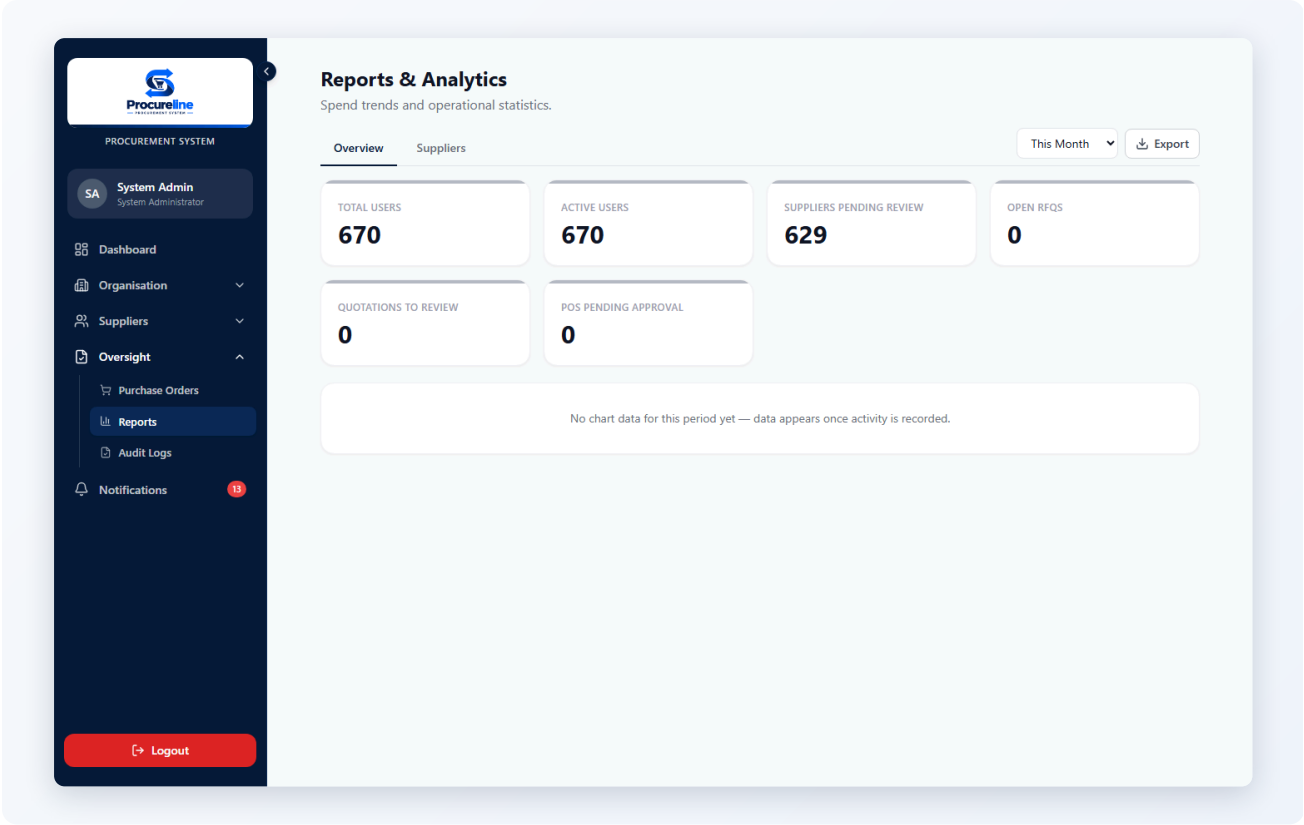

Figure Reports & Analytics: the Overview tab with period selection and Export; the Suppliers tab holds the supplier registry.

Oversight › Reports shows spend trends, department spend and order value by status for the week, month, quarter or year, with `Export` to CSV. The **Suppliers** tab is the supplier registry with KYS, scores, orders and spend. Reports are available to every staff role except end users.

PART 3

Who does what

Eight roles use the system, and each sees and does only its own work. No single person can complete a purchase alone: the requester cannot approve, the approver cannot receive, and the receiver cannot pay.

3.1 The roles

ROLE	WHO HOLDS IT	WHAT THEY DO IN THE SYSTEM	WHAT THEY CANNOT DO
End user	Staff in any department or site	Raise requisitions for their department and track them to delivery	Approve anything; see other people's requests
Department head	Head of each department; a deputy can act for them	Approve or reject the team's requisitions; raise their own, which go straight to Stores; collect delivered goods from Stores	Approve their own requisition; approve purchase orders; pick a winning quotation
Stores officer	Stores and warehouse staff	Check stock against requisitions; issue stock; receive goods on a GRV; accept or reject deliveries; move stock between sites	Approve orders or invoices
Procurement officer	Procurement staff	Accept requisitions; issue RFQs; select the winner with a justification; raise orders; onboard suppliers and submit them for activation; handle bank-detail changes; evaluate suppliers	Activate a supplier alone; authorise their own award; approve orders
Head of Procurement	The department head of the Procurement department	Everything a procurement officer does, plus: authorise awards; first approval on every order; approve waivers; approve, return or reject supplier activations	Select a winner and authorise the same award; approve an activation they submitted
Finance manager	Finance team	Second approval on orders; match and approve invoices; record payments; set department budgets	Raise orders or receive goods
COO	COO of the organisation	Final approval on orders at or above the organisation's limit (default USD 5,000); approve waivers; approve, return or reject supplier activations	Raise or receive anything; edit supplier records
Supplier	External companies	Register once; upload KYS documents; quote on RFQs; acknowledge orders; follow deliveries; submit invoices; request bank-detail changes	See internal approvals or other suppliers' bids

ROLE	WHO HOLDS IT	WHAT THEY DO IN THE SYSTEM	WHAT THEY CANNOT DO
Administrator	IT administrator for the organisation	Manage users, departments and sites; read the audit log; view orders and reports	Any business step: approvals, awards, receiving, payments

Two-person rules. An award needs one person to select it and the Head of Procurement to authorise it. A supplier activation needs one person to submit it and the Head of Procurement or the COO to approve it. A bank-detail change needs a call-back by one person and approval by another, neither of them the requester.

3.2 The purchase, step by step

A purchase moves through 20 steps in five phases. Each step unlocks only when the one before it is complete. The tinted rows are controls the system enforces.

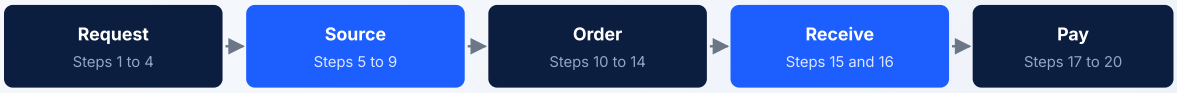

Figure The five phases of a purchase. The rehearsal purchase in the launch checklist runs all twenty steps once, with an order above the COO limit.

#	STEP	WHO	WHAT THE SYSTEM CHECKS	SEE
1	Raise and submit a requisition	End user or department head	At least one item; a title	User Manual 3.1
2	Approve the requisition	Department head or deputy	Not the requester; over budget needs a reason and Finance is told	User Manual 3.5
3	Stock review	Stores officer	Items in stock are issued; only the shortfall goes on	User Manual 4.1
4	Accept for sourcing	Procurement officer	Within 2 days, or it is marked overdue	User Manual 5.2
5	Publish the RFQ to invited suppliers	Procurement officer	A deadline; suppliers matched by category, topped up to three	User Manual 5.3
6	Submit sealed quotations	Suppliers	Bids stay sealed until the RFQ closes	User Manual 10.4

#	STEP	WHO	WHAT THE SYSTEM CHECKS	SEE
7	Close the RFQ; bids ranked	Procurement officer	Fewer than three quotes needs a waiver from the COO or Head of Procurement	User Manual 5.4, User Manual 5.5
8	Select the winner with a justification	Procurement officer	A written reason, for the whole quotation or line by line	User Manual 5.6
9	Authorise the award	Head of Procurement	A different person from the selector; the supplier must be activated with KYS complete	User Manual 7.1
10	Raise and submit the purchase order	Procurement officer	One order per accepted quotation	User Manual 5.8
11	Approve the order	Head of Procurement	Always	User Manual 7.2
12	Approve the order	Finance	Always	User Manual 8.1
13	Approve the order	COO	Only at or above the organisation's limit in USD; below it, skipped	User Manual 7.2
14	Order sent; supplier acknowledges	System, then supplier	The order PDF is emailed on the last approval; acknowledging marks it issued	User Manual 10.5
15	Receive the goods on a GRV	Stores officer	Delivery note, who delivered, counts, witnesses, MSDS for hazardous goods	User Manual 4.3
16	Accept into stock, or reject	Stores officer	Accept all, partially accept or reject; the supplier is told	User Manual 4.4
17	Submit an invoice against the order	Supplier	Only issued orders; lines come from received quantities	User Manual 10.7
18	Three-way match; approve the invoice	Finance	Order, GRV and invoice must agree within 2%; a variance needs a written reason	User Manual 8.2
19	Record the payment	Finance	Tuesday or Thursday run	User Manual 8.3

#	STEP	WHO	WHAT THE SYSTEM CHECKS	SEE
20	Evaluate the supplier	Procurement officer	Seven criteria, scored 1 to 5	User Manual 5.10

Any approver can reject with a reason, which sends the record back with that reason on file. A requisition, RFQ or purchase order can also be cancelled with a reason from a fixed list.

3.3 Your menu

The left-hand menu is different for each role. These are the menus as built; **Dashboard** and **Notifications** appear for everyone and are left out below.

PART 4

Help

Most problems are one of the following. Your first call is your administrator; a supplier's first call is the buyer's Procurement team. When you report a problem, give the record number (for example REQ-0042 or PO-0017) and what the screen said.

4.1 Common problems

I signed in but no code arrived.

Check spam. The code goes to the address on your user record; if that is wrong, the administrator fixes it under Staff Team. Codes expire after 10 minutes; click `Back to sign in` to get a new one. If nobody in the organisation receives codes, email sending has stopped: tell the technical team.

The page says my session is refused or sends me back to sign in.

You are at another organisation's address, or your session expired. Use your own organisation's address and sign in again.

I cannot see a button the manual describes.

Buttons appear only for the role that performs the step, and only when the record is at that step. Check the status badge: the record is still with the person before you. If your role is wrong, the administrator changes it.

My requisition has been "Pending HOD Approval" for days.

The department head has not acted. Their Approvals and Team Requisitions pages mark it overdue. If they are away, the administrator names a deputy on the department, who can approve.

I cannot submit my requisition.

It needs a title and at least one item. A new item not in the catalogue is fine; describe it.

Procurement cannot select or authorise my chosen supplier.

The supplier is not activated, its KYS is short for its tier, or a required document has expired. Open the supplier: the facts strip shows *Spend authorisation* and KYS progress. Complete the file and submit for activation (User Manual 6.5), or replace the expired document.

The RFQ closed with fewer than three quotes.

A waiver from the COO or Head of Procurement is needed (User Manual 5.5, User Manual 7.3), or re-source with more suppliers invited. Check that invited suppliers can actually sign in; help them register (User Manual 10.1).

The order went to the COO although it is small.

It is in a currency with no exchange rate on file, so the system routes it to the COO rather than guess. The Procureline operators set the rate (2.4).

Finance cannot approve an invoice.

Either there is no GRV for the goods (Stores must receive them first, User Manual 4.3), or the invoice exceeds what was received and not yet invoiced. Reject it so the supplier submits a corrected one.

A supplier says they changed their bank details but payments still go to the old account.

The change is waiting for the call-back or the second approval (User Manual 6.7). Until it is approved, the old account stands and payments are held.

Stock on the screen does not match the shelf.

A movement was not recorded. Find it in Stock Movements and record the missing issue, receipt or transfer. Do not edit the balance.

No reminders or overdue alerts are arriving.

The hourly jobs are not running on the hosted API. The administrator checks the audit log for the job and tells the technical team (1.2, item 6).

A supplier cannot register: "This company is already registered".

A record with that registration number exists, perhaps created by Procurement. The supplier signs in with that login or uses **Forgot password?**; otherwise Procurement looks the record up by registration number.

4.2 Glossary

TERM	MEANING
Activation request	A pending supplier put forward by Procurement for a second person to approve. Open until approved, returned or rejected
Award	The decision to buy from a supplier's quotation, in full or line by line
Business unit	What Procureline calls an organisation it serves: its own address, its own database and its own settings
COO limit	The order value in US dollars at or above which the COO must approve. The default is USD 5,000
CR14 / CR6	Company registration forms: the list of directors (CR14) and the registered address (CR6)
Deputy head	A user who can act for a department head on that department's requisitions
GRV	Goods received voucher: the Stores record of what physically arrived
Head of Procurement	The department head of the Procurement department. Authorises awards and gives the first approval on orders
IR	Internal requisition: a requisition as seen by Stores during stock review
KYS	Know Your Supplier: the due diligence checklist a supplier must pass before it can be paid
MSDS	Material safety data sheet, required for hazardous goods
NSSA	National Social Security Authority; its compliance certificate is a KYS item

TERM	MEANING
PO	Purchase order: the commitment to buy, sent to the supplier after approval
Requisition (PR)	A request from a department for goods or services
Rejected (registration)	A supplier registration turned down with a reason. The company cannot quote or be awarded; the registration can be reopened. Not a blacklisting
RFQ	Request for quotation, sent to invited suppliers
Sealed bid	A quotation nobody can see or compare until the RFQ closes
Spend-authorised	A supplier whose activation has been approved and who may receive awards and orders
Store requisition	A department's request to collect issued or delivered goods from Stores
Supplier code	The permanent register number given to a supplier on first save, such as ORG-SUP-00042
Three-way match	Comparing the order, the goods received and the invoice before payment
Tier	A supplier's risk class (critical, strategic, tactical, transactional, unclassified), which sets the depth of its KYS and how often it is reviewed
Two-person rule	A control that needs two different people, one to propose and one to approve: awards, bank-detail changes and supplier activation
Waiver	Approval to award with fewer than three quotations, with a reason from a fixed list
