

System Overview

What the system is for, who uses it, and how each module works, in non-technical language.

Audience	Business users, management, testers
Version	1.0
Date	4 September 2026
Live system	https://tefomaprocurement.vercel.app

This document explains **what the system is for, who uses it, and how the main processes work** — without technical detail.

1. Purpose

Tefoma Procurement is a **web-based procurement and stores management system**. It replaces paper and email chains with one place to:

- Request goods and services (internal requisitions)
- Source suppliers and collect quotations
- Approve and issue purchase orders
- Receive goods into stores and track inventory
- Manage supplier compliance (KYS) and performance
- Pay suppliers (invoices and payments)
- Report on spend, suppliers, and activity

Everything is **role-based**: each person sees only what they need. Actions are **logged** for audit.

2. Who uses the system

Role	Main job in the system
Admin	Users, departments, sites, suppliers, audit logs, full oversight
End user	Creates purchase requisitions for their department
Department head	Approves requisitions and purchase orders for their department
Stores officer	Reviews stock for requisitions, receives deliveries (GRV), manages inventory, store requisitions, stock transfers
Procurement officer	Suppliers, KYS, RFQs, quotations, purchase orders, evaluations
Finance	Budgets, PO approval, invoices, payments
COO	High-value PO approval (typically ≥ USD 5,000), reports, supplier oversight
Supplier (external)	Profile, KYS documents, RFQs, quotations, POs, deliveries, invoices

Staff sign in at `/login` . Suppliers use `/supplier/login` or self-register at `/register` .

Security: Sign-in uses email, password, and a **one-time code (OTP)** sent to the user’s inbox.

3. The big picture — one procurement journey

Not every requisition goes through every step (e.g. items fully issued from stock skip procurement).

4. Modules and what they do

4.1 Organisation setup (Admin)

- **Staff Team** — Create users, assign roles, departments, sites.
- **Departments** — Organisational units for requisitions and budgets.
- **Sites** — Locations (e.g. Head Office) for inventory and stock transfers.

4.2 Purchase requisitions (Internal requests)

Who: End users create; department heads approve; stores review.

- **My Requisitions** — Draft and submit requests with line items (from catalog or free text).
- **Approvals** — Department head approves or rejects with a reason.
- **Stores PR Review** — Stores checks whether items are in stock, issues stock, fulfills, or forwards to procurement.

Statuses move from draft → pending approval → stores review → fulfilled or forwarded → procurement sourcing.

4.3 Procurement sourcing

Who: Procurement officers (and procurement head where configured).

- **Requisitions** — Accept or reject items forwarded from stores; adjust lines before accepting.
- **RFQs** — Create from requisitions, invite **active** suppliers, set deadline, publish and close.

- **Quotations** — Review supplier quotes; accept, reject, or use a waiver when fewer than three quotes.
- **Purchase Orders** — Create from winning quotation; submit into the approval chain.

4.4 Purchase order approvals

Who: Department head, Finance, COO (for larger values).

- **Approvals** — Each role sees POs waiting for them; approve or reject with comments.
- Typical chain: **HOD** → **Finance** → **COO** (COO when total meets the configured threshold, e.g. USD 5,000).

4.5 Supplier management

Who: Procurement and Admin.

- **Suppliers** — List, add, bulk import, filter by status (pending, active, etc.).
- **Supplier profile** — Tabs for overview, corporate, banking, trade, directors, references, documents, performance, reports. Procurement can **Edit** each section and save.
- **KYS (Know Your Supplier)** — On the **Documents** tab: upload compliance files, complete checklist, **Verify KYS & Activate** (or override with reason). Pending suppliers are found under **Suppliers** → **Pending**.
- **Evaluations** — Procurement scores suppliers on 7 criteria (1–5); saved **immediately** (no approval workflow). Drives performance analytics and supplier profile scores.
- **Analytics** → **Performance** — Rankings and scores from evaluations (out of 5).
- **Analytics** → **Compliance** — KYS verified vs pending, document coverage, watchlist.
- **Evaluations** (menu) — Due suppliers, record new evaluations, history.

4.6 Supplier portal

Who: Registered suppliers.

- Complete **profile** and **KYS documents**.
- **My RFQs** — View invites and submit quotations.
- **My Purchase Orders** — Acknowledge and track orders.
- **My Deliveries** — Delivery status.
- **Submit Invoice** — Invoices linked to POs.

New suppliers may **self-register**; procurement verifies KYS and activates them.

4.7 Stores and inventory

Who: Stores officers.

- **Inventory** — Catalog items, quantities, reorder levels.
- **Deliveries (GRV)** — Receive against POs; accept into stock (full, partial, or reject).
- **Store Requisitions** — Departments request stock from stores.
- **Stock Movements** — History of ins and outs.
- **Stock Transfers** — Move stock between sites.

4.8 Finance

Who: Finance role.

- **Budgets** — Department allocations.
- **Invoices** — Review supplier invoices; approve or reject.
- **Payments** — Record payments against approved invoices.
- **Approvals** — Financial step on purchase orders.

4.9 Reports and oversight

- **Reports** — Role-based dashboards; **Suppliers** tab for registry, spend, scores, export.
- **Audit Logs** (Admin) — Who did what and when.
- **Notifications** — In-app alerts for workflow events (RFQ published, PO approved, etc.).
- **Email** — OTP, password reset, and workflow emails when configured on the server.

5. Supplier compliance (KYS) in plain terms

Before a supplier is **active** and can quote on RFQs:

1. Supplier profile is created (by procurement or self-registration).
2. Compliance documents are uploaded (tax clearance, registration, etc.).
3. Procurement completes the **KYS checklist** on the supplier **Documents** tab.
4. Procurement clicks **Verify KYS & Activate** (or uses a documented override).

Compliance analytics show who is verified, who is pending, and checklist progress (%).

6. Supplier performance (evaluations) in plain terms

Procurement periodically **evaluates** suppliers:

- Seven areas scored 1–5 (e.g. pricing, delivery, quality).
- **Overall score** = average of those scores (out of 5, not a percentage).
- Evaluations are **saved when submitted** — no HOD or COO sign-off on evaluations.
- **Next review** is typically set **3 months** ahead.
- **Performance** page and supplier profile **Performance** tab show the latest scores.

7. Notifications and email

Channel	What it covers
In-app notifications	RFQs, approvals, PO status, supplier events, etc.

Channel	What it covers
Email	Login OTP, password reset, and workflow emails (when API email is configured)

Branding in emails and the app uses **Tefoma Construction / Tefoma Procurement**.

8. What the system does *not* do (today)

- It is **not** a full accounting/ERP system — it tracks procurement and payments but does not replace your ledger.
- **Evaluation scores** are manual ratings, not auto-calculated from delivery or invoice data.
- Some analytics pages only show meaningful data **after** suppliers exist, KYS is done, and/or evaluations are recorded.

9. Related documents

Document	Use for
CLIENT_TESTING_GUIDE.md	Step-by-step UAT on the live site
TESTING_GUIDE.md	Developer / internal testing notes
BUSINESS_README.md	Broader business case and feature list (may include older naming)

10. Quick reference — menu by role

Admin: Dashboard, Staff, Departments, Sites, Suppliers (list, analytics, evaluations), RFQs, Quotations, POs, Reports, Audit logs.

Procurement: Requisitions, RFQs, Quotations, POs, Suppliers, Reports.

Department head: Approvals, My Requisitions, Store Requisitions, Reports.

Stores: PR review, Deliveries, Inventory, Store Requisitions, Stock movements/transfers, Reports.

Finance: Approvals, Invoices, Payments, Budgets, POs, Reports.

COO: Approvals, Reports, Suppliers (read/evaluate oversight).

Supplier: Dashboard, RFQs, Quotations, POs, Deliveries, Profile, KYS, Invoices.

Last updated to reflect current application behaviour: consolidated supplier workflow, immediate evaluations, and Tefoma branding.
