

Tester Guide

One request carried through the whole system, from the person who needs a part to the supplier being paid. No technical knowledge needed.

Audience	The person doing the testing
Time needed	60 to 90 minutes for a full run
Version	1.0
Date	4 September 2026
You will need	Logins for each role and access to their inboxes

You will take one request through the whole system, from the person who needs a part to the supplier getting paid. Follow the steps in order. Each step tells you what to click, what to type, and **what you should see if it worked**.

Allow **60–90 minutes** for a full run.

Before you start

What you need

You need	Notes
A computer with Chrome or Edge	Phone works but is harder
The system address	<code>https://tefomaprourement.vercel.app</code>
Logins for each role	See the table in Step 0. Ask the project owner if you don't have them
Access to the email inbox for each login	Every sign-in sends a one-time code
This guide, printed or on a second screen	You'll be switching users a lot

The single most important thing to understand

You are **one person pretending to be seven different people**. The system deliberately stops one person doing everything — the person who requests cannot approve, the person who approves cannot pay. So you will **log out and log back in as someone else** many times.

Tip: Use a normal window for one role and an Incognito/Private window for another. That way you can keep two people signed in at once and stop re-typing codes. (Chrome: `Ctrl+Shift+N` . Edge: `Ctrl+Shift+P` .)

Signing in (you'll do this a lot)

1. Go to `https://tefomaprourement.vercel.app`
2. Choose **Tefoma Staff** (or **Supplier Portal** for supplier steps).
3. Enter the email and password.
4. **A 6-digit code is emailed to that address**. Open the inbox, get the code, type it in.

If the code doesn't arrive, wait 30 seconds and check spam. The code expires — if you're slow, just sign in again to get a fresh one.

Step 0 — Write down your logins

Fill this in before you start. You'll be glad you did.

Role	What they do in the test	Email	Password
End user	Raises the request		
Department head (the requester's dept)	First approval		
Stores officer	Checks stock, receives goods		
Procurement officer	Runs the RFQ, raises the PO		
Department head (Procurement)	Second approval		
Finance	Third approval, pays		
Supplier	Quotes, delivers, invoices		

Note: COO is only needed for orders **over USD 5,000**. Our test order is small, so the COO step is skipped on purpose. See Step 8 if you want to test that too.

The story you are testing

Keep this in your head — it makes every step make sense:

A JCB 3CX backhoe at the Mbudzi Interchange site has a leaking hydraulic pump. The machine is down. The operator needs a **seal kit**, but nobody on site knows the part number. So they take a **photo of the machine's data plate** — the metal plate on the machine showing its serial number — and attach it to the request.

The supplier doesn't have the genuine JCB part, but has an **equivalent** that fits. They must show us exactly what they'd send before we agree.

We also add **A4 paper** to the same request. This is deliberate: it proves that ordinary office requests don't get cluttered with machine fields.

STEP 1 — The operator raises the request

Sign in as: End user

1. In the left menu click **My Requisitions**.
2. Click the green + **New Requisition** button (top right).
3. You are now on the **Internal Requisition** form.

Fill in the top of the form:

Field	What to type
Title *	Hydraulic pump seal kit - JCB 3CX (Mbudzi)

Field	What to type
Description	Backhoe PL-014 is down with a leaking hydraulic pump. Data plate photographed as the part number is not known on site.
Work Order	WO-TEST-001 (or leave blank)
Urgency	Choose High

Item 1 — the machine part

In the ITEM 1 box:

Field	What to type
Details	Hydraulic pump seal kit
Category *	Click and choose Motor Vehicle Spares, Tyres & Accessories
Package	Kit
Quantity	2
Unit	Each
Specification	OEM or approved equivalent

Now the new part. Below Specification there is a grey bar:

> Equipment details & photos (optional)

Watch this closely — this is the first thing to test. The moment you choose the Motor Vehicle Spares category, this panel should open by itself. That's intended: the system recognises this is a machine part.

Click the bar if it isn't already open. You'll see ten boxes. Fill in only what you'd realistically know — every one is optional:

Box	Type this
Make	JCB
Model	3CX Sitemaster
Plant / fleet number	FC-EX-014
Registration number	AEB 1234
Chassis / VIN number	JCB3CX4TXK2345678
Engine number	4TNV98-ENG778899
Machine serial / PIN	PIN-JCB3CX4TXK2345678

Box	Type this
Component serial	PUMP-SN-0099821
Part number (OEM)	<i>leave blank — we don't know it</i>
Hours / odometer	7450

Attach the data plate photo

1. Under **Photos for the supplier**, click **Add photo**.
2. Choose any photo from your computer. A photo of any machine plate is ideal;

any picture will do for testing.

1. Once it appears, set the dropdown under it to **Data plate / serial plate**.
2. In the caption box type `Machine data plate, boom base` .

Item 2 — the office item

1. Click + **Add Item** (top right of the Items section).
2. In **ITEM 2**:

Field	What to type
Details	A4 Bond Paper
Category *	Choose an office/stationery category
Package	Ream
Quantity	5
Unit	Ream
Specification	80gsm white

Test this: the **Equipment details & photos** panel on Item 2 should stay **closed**. Do not open it. This proves office requests stay simple.

Submit

Click **Submit for Approval** (bottom right).

✓ What you should see

- A success message.
- The request appears in **My Requisitions**.
- Status reads **Pending HOD Approval**.
- Write down the number, e.g. `PR-2026-000xx` — you'll need it all the way through.

✗ Tell us if

- The equipment panel did **not** open by itself when you picked the vehicle-spares category.
- The photo wouldn't upload, or vanished after saving.
- You could not type continuously in any box (letters dropping out).
- The A4 paper line showed machine fields.

STEP 2 — Check what the request looks like

Still signed in as the **End user**, click into the requisition you just made.

✓ What you should see

Under **Line Items**, the *Hydraulic pump seal kit* row should show all your machine details as neat labelled lines:

```
Make: JCB      Model: 3CX Sitemaster
Plant / fleet number: FC-EX-014
Registration number: AEB 1234
Chassis / VIN number: JCB3CX4TXK2345678
Engine number: 4TNV98-ENG778899
Machine serial / PIN: PIN-JCB3CX4TXK2345678
Component serial: PUMP-SN-0099821
Hours / odometer: 7450
```

...with a small **photo thumbnail** underneath. Click the thumbnail — it should open large enough to read.

Directly below, the **A4 Bond Paper** row should show **only** the description and `80gsm white`. **No machine fields at all.**

✗ Tell us if any value you typed is missing, shows in the wrong place, or if the paper line has machine fields on it.

STEP 3 — Department head approves

Sign out. Sign in as: **Department head** (the requester's department)

1. Click **Approvals** (or **Requisitions**) in the left menu.
2. Find your `PR-2026-000xx` and open it.
3. Check you can see the machine details — the approver needs them to judge the request.
4. Click **Approve** and add a comment: `Approved – machine is down, parts required urgently.`

✓ What you should see — status changes to **Stores Review**.

Also worth testing: create a second throwaway requisition and **Reject** it with a reason, to check rejection works and the requester is told why.

STEP 4 — Stores checks the shelves

Sign out. Sign in as: Stores officer

1. Go to **Stores PR Review** (or **Requisitions**).
2. Open your requisition.
3. Stores decides: do we already have this in stock?
 - If yes → issue it from stock.
 - For our test → click **Forward to Procurement** (we're pretending it's not held).

✅ **What you should see** — the request moves on to procurement, and stores can see the same machine details you entered.

⚠️ **Known issue to watch for.** If procurement starts an RFQ before stores has responded, the request skips this step entirely. If that happens, note it — we've already reported it, and it's useful to know whether it bothers your team in practice.

STEP 5 — Procurement asks suppliers for prices

Sign out. Sign in as: Procurement officer

1. Go to **Requisitions**, open your request, and check the machine details are there.
2. Create an **RFQ** (Request for Quotation) from it.
3. Set a **submission deadline** a few days ahead.
4. **Invite at least 3 suppliers** if you can — the rules expect three quotes.

(If fewer are available, that's fine; Step 7 covers the waiver.)

1. Publish it.

✅ **What you should see**

- An RFQ number, e.g. `RFQ-2026-000xx`.
- Opening the RFQ shows **the machine details and the data plate photo** carried over

from the requisition.

❌ **Tell us if** the machine details or photo did **not** carry across. That's the whole point of the feature — the supplier must get them.

STEP 6 — The supplier quotes (the important one)

Sign out. Sign in as: Supplier — via **Supplier Portal**, not the staff login.

1. Click **My RFQs**. Your RFQ should be listed.
2. Open it.

✓ First check — what the supplier can see

The supplier should see the machine identification **and be able to open the data plate photo and read it**. This is the entire purpose of the change: previously a supplier received only the words "hydraulic pump seal kit" and had to phone the site to ask what machine it was for.

1. Click **Submit Quote**.
2. For the **Hydraulic pump seal kit** line, enter a unit price, e.g. **145.50** .
3. For **A4 Bond Paper**, enter e.g. **6.25** .

Offering an equivalent part

Under the seal kit line, tick:

☒ **I am offering an equivalent / alternative part for this line**

Two boxes appear:

Box	Type this
What are you supplying?	Donaldson equivalent seal kit (OEM-interchangeable)
Its part number	P552100-EQ

Then click **Add photo** and upload a picture — this represents the data plate of the part the supplier would actually send.

1. Submit the quotation.

✓ **What you should see** — a quotation number, e.g. **QT-2026-000xx** , and it appears under **My Quotations**.

✗ **Tell us if the alternative tick-box is missing, or the photo won't attach.**

STEP 7 — Procurement compares and accepts

Sign out. Sign in as: Procurement officer

1. Go to **Quotations** and open the supplier's quote.

You may see "Bid is sealed". This is **correct and deliberate** — quotes stay hidden until the deadline passes or you close the RFQ, so nobody can peek at prices early. Click **Close RFQ & Reveal Bids** to continue.

✓ **What you should see** — the key screen

On the seal kit line, an **amber warning box**:

Alternative offered – not the exact part requested
Donaldson equivalent seal kit (OEM-interchangeable)
Part number: P552100-EQ

...with the supplier's photo below it.

This is what you're checking: the buyer is warned they are not getting the exact part, is told precisely what they are getting, and can see it — all before agreeing to buy.

If fewer than 3 suppliers quoted

You'll see the request blocked with a note about needing three quotations. To proceed:

- 1. Choose a **waiver type** — e.g. *Insufficient quotations received*.
- 2. Type a reason in the box, e.g.

Only one supplier responded within the deadline.

- 1. Click **Approve waiver**.

Test this box carefully. Type a long sentence into the waiver reason. Every letter must appear. (This box had a fault where only the first letter registered — it has been fixed, and this step confirms the fix.)

- 1. Complete any remaining authorisation steps shown on screen, then **Accept** the quotation.

STEP 8 — The purchase order and its approvals

Still signed in as: Procurement officer

- 1. From the accepted quotation, create the **Purchase Order**.
- 2. Fill in delivery address and expected date.
- 3. Submit it for approval.

Now the PO goes through **three people in order**. Sign in as each in turn:

#	Who	Where they look	What they do
1	Department head (requester's dept)	Approvals	Approve
2	Department head (Procurement)	Approvals	Approve
3	Finance	Approvals	Approve

 What you should see

Open the PO. There is an **Approval Status** panel with four boxes. After all three approvals it should read:

- 1. Dept HOD ✓ Approved
- 2. Procurement HOD ✓ Approved
- 3. Finance Approval ✓ Approved
- 4. COO Authorization Not required (below USD 5,000)

and the PO status becomes **Approved**.

Testing the COO rule (optional but valuable). Our test order is small, so COO is skipped. To test the threshold, run a second request with a quantity/price that pushes the total **over USD 5,000** — box 4

should then require COO approval, and the PO must not proceed until the COO signs off.

✗ Tell us if the PO reached Approved without all three approvals, or if approvals were accepted out of order.

STEP 9 — Supplier accepts the order

Sign out. Sign in as: Supplier

1. Go to **My Purchase Orders**.
2. Open the PO and **Acknowledge** it, with a note like

Acknowledged – equivalent seal kit in stock, 10 days delivery.

✓ What you should see — the PO shows as acknowledged.

STEP 10 — Goods arrive at the store

Sign out. Sign in as: Stores officer

1. Go to **Deliveries**.
2. **Receive** the goods against the PO. Fill in:

Field	What to type
Delivery note number	DN-001
Delivery date	today
Who delivered — name	J. Moyo
ID / company	63-1234567X22
Vehicle registration	ADZ 4471
Contact number	+263772000111
Quantity received	the full quantity for both lines

1. Save. A **GRV number** is created, e.g. GRV-2026-000xx .

Print the GRV

Open the delivery and **print** the Goods Received Voucher. A PDF opens.

✓ What you should see — a branded Tefoma document showing the PO, supplier, items, and **three signature blocks**: DELIVERED BY, RECEIVED BY, INSPECTED BY. "Delivered by" should show J. Moyo with the vehicle registration.

⚠ **Known issue** — please confirm you see it too. **INSPECTED BY** will print as "—" (blank). When a delivery arrives complete, the system accepts it automatically and never asks who inspected it. We have reported this. Please note whether your team considers this a problem, because a GRV normally needs to evidence who physically checked the goods.

Also check: the stock level for the received items should **increase** in **Inventory**.

STEP 11 — Invoice and payment

Sign out. Sign in as: Supplier

1. Submit an **invoice** against the PO for the full amount.

Sign out. Sign in as: Finance

1. Go to **Invoices**, open it, and **Approve**.

You may be blocked with a message about a *three-way match failure*. This is **correct** — the system is refusing to pay because the invoice, the order and the goods received don't line up exactly. Review the difference, then use the force-approve option with a reason. Note that this gets recorded.

1. Record the **payment** against the approved invoice.

✅ **What you should see** — invoice status **Paid**, balance **0.00**.

STEP 12 — Check the trail

Sign in as: Admin

1. Go to **Audit Logs**.
2. You should find entries for the whole run — approvals, the GRV being printed, the

invoice approval (marked as forced if you did that), and the payment.

1. Also check **Notifications** as a couple of the roles — people should have been told when something needed their attention.

Your checklist

Tick as you go. Give this back to the project owner.

#	Step	Worked?	Notes
1	Requisition created with machine details + photo	☐	
2	Equipment panel opened by itself for vehicle spares	☐	

#	Step	Worked?	Notes
3	A4 paper line stayed simple (no machine fields)	☐	
4	All machine details shown on the requisition	☐	
5	Department head approved	☐	
6	Stores forwarded to procurement	☐	
7	RFQ carried the details + photo across	☐	
8	Supplier could see and read the data plate	☐	
9	Supplier offered an equivalent + uploaded its photo	☐	
10	Buyer saw the amber "Alternative offered" warning	☐	
11	Waiver reason box accepted continuous typing	☐	
12	PO approved by all three in order	☐	
13	COO correctly not required (under \$5,000)	☐	
14	Supplier acknowledged the PO	☐	
15	GRV created with who delivered + vehicle	☐	
16	GRV printed as a proper document	☐	
17	INSPECTED BY was blank (expected — confirm)	☐	
18	Stock increased after receipt	☐	
19	Invoice approved and payment recorded	☐	
20	Audit log shows the full trail	☐	

How to report a problem

Please include all five of these — it's the difference between a bug we can fix in an hour and one that takes a week:

1. **Which role you were signed in as** (e.g. "Stores officer").
2. **Which step number** from this guide.
3. **What you expected** to happen.
4. **What actually happened** — the exact message on screen.
5. **A screenshot.** (Windows: `Windows key + Shift + S`.)

Also say whether it **stopped you completely** or was just confusing — that tells us how urgently to fix it.

Things that look like faults but are not

Don't report these — they are the system working as designed:

What you see	Why it's correct
"Bid is sealed" on a quotation	Prices stay hidden until the RFQ closes, so nobody can peek
Can't activate a supplier — KYS incomplete	Suppliers must pass compliance checks first; an override needs a written reason
"Three-way match failed" on an invoice	Finance won't pay when invoice, order and goods received disagree
COO step greyed out	Only required above USD 5,000
"Access Denied"	You're signed in as the wrong role for that page — that's the point
A code is needed every sign-in	Two-factor security, on purpose

Known issues already reported

You may hit these. Note them if you do, but they're already logged:

1. **INSPECTED BY is always blank on the printed GRV** (*medium*) — deliveries received in full auto-accept, so nobody is recorded as having inspected them.

1. **Stores can be bypassed** (*low*) — starting an RFQ while a request is still in stores review skips the stores check.

1. **Old test data in the system** (*low*) — suppliers with names starting `SPLIT-`, `SMOKE-` or `NEG-` are leftovers from earlier testing, not real vendors.
