

Client Testing Guide

Setting up the system for testing, then working through every feature area. The broader companion to the step-by-step guide.

Audience	Business testers on the live system
Time needed	2 to 3 hours setup, then 1 to 2 hours per run
Version	1.0
Date	4 September 2026

Tefoma Procurement — Client Testing Guide

This guide is for **business testers** using the **live system**. You do not need access to the code or database.

Live application: <https://tefomaprocurement.vercel.app> (after Vercel deploy)

1. Before you start

What you need

- A modern web browser (Chrome, Edge, or Firefox).
- **Real email addresses** that can receive mail (see section 2).
- Your **admin login** (provided separately by your project contact).
- About **2–3 hours** for first-time setup, then **1–2 hours** for one full end-to-end test.

Important rules

1. **Use only working email addresses** — every login sends a **one-time code (OTP)** to the user's inbox. Fake or shared inboxes that nobody checks will block testing.
 2. **Use one browser profile per role** when testing in parallel, or log out fully between roles.
 3. **Follow the steps in order** the first time; later you can repeat individual sections.
 4. **Take screenshots** of any error or unexpected screen when reporting issues.
-

2. Email addresses (critical)

The system sends:

- **Login OTP** — required on every sign-in (staff and suppliers).
- **Password reset** — if you use “Forgot password”.
- **Workflow notifications** — RFQ invites, approvals, etc. (in-app notifications always work; email depends on server configuration).

Do

- Use addresses your team **owns and can open** (e.g. `jane.doe@yourcompany.co.zw`).
- Use **unique emails per test user** (one person = one email = one account).
- For suppliers, use a **real company contact email** or a dedicated test mailbox (e.g. `supplier-test@yourcompany.co.zw`).

Do not

- Use `test@test.com`, `user@example.com`, or emails that **bounce**.

- Reuse the same email for **staff and supplier** accounts.
- Use emails you **cannot access** — you will not receive the OTP.

Suggested naming (optional)

Role	Example email pattern
End user	requester@yourcompany.co.zw
Department head	hod.ict@yourcompany.co.zw
Stores	stores@yourcompany.co.zw
Procurement	procurement@yourcompany.co.zw
Finance	finance@yourcompany.co.zw
COO	coo@yourcompany.co.zw
Supplier A	supplier.a@partner.co.zw
Supplier B	supplier.b@partner.co.zw
Supplier C	supplier.c@partner.co.zw

Keep a simple spreadsheet: **Name | Email | Role | Password (shared securely)**.

3. How to sign in

Who	Login page
Staff (admin, procurement, finance, stores, etc.)	https://tefomaprocurement.vercel.app/login
Suppliers	https://tefomaprocurement.vercel.app/supplier/login
New supplier self-registration	https://tefomaprocurement.vercel.app/register

Login steps (all users)

1. Enter **email** and **password**.
2. Click **Sign in**.
3. Check the **email inbox** (and spam folder) for a **6-digit OTP**.
4. Enter the OTP on screen and complete sign-in.

If OTP does not arrive within 2 minutes, confirm the email is correct and real, then try again or contact your administrator.

4. Phase A — Admin setup (do this first)

Sign in as **admin** (login).

A1. Departments

1. Open **Departments** in the sidebar.
2. Create departments you will use in testing (e.g. **ICT, Operations, Finance**).
3. Note each department name — users must be assigned to a department where required.

A2. Sites

1. Open **Sites**.
2. Confirm **Head Office (HQ)** exists.
3. Optionally add a second site (e.g. **Site B**) if you will test **stock transfers**.

A3. Staff test users

1. Open **Staff Team** (Users).
2. Click **Add user** for each role below.
3. Use **real emails** and passwords (minimum 6 characters). Share passwords securely with testers.

Role to select	Purpose in testing
End user	Creates purchase requisitions
Department head	Approves requisitions and POs (assign department)
Stores officer	Reviews stock, receives goods (assign home site)
Procurement officer	RFQs, quotations, POs
Finance	PO and invoice approval, payments, budgets
COO	Approves POs over USD 5,000

Expected: Each user appears in the list as **Active**. Each can log in and receive OTP at their email.

A4. Inventory (for stores testing)

1. Log in as **stores officer** (or stay as admin if you have access to **Inventory**).
2. Open **Inventory** → add a few **catalog items** (e.g. paper, toner, cables).
3. Set **quantity on hand** and **reorder level** so stores can issue stock or show low-stock alerts.

A5. Supplier accounts (need at least 3 for full quotation testing)

Option 1 — Admin/procurement creates suppliers (recommended)

1. As admin, open **Suppliers** → **Add supplier**.
2. Fill company details and use a **real supplier email**.

3. Set a temporary password; the supplier receives a welcome email if mail is configured.
4. Repeat for **at least three suppliers** if you want to test the “three quotations” rule without a waiver.

Option 2 — Supplier self-registers

1. Supplier opens [Register](#) and completes KYS.
2. Procurement opens **Verification Hub** or **Suppliers** → opens the pending supplier → **Approve & Activate**.

Expected: Suppliers show status **Active** before they can be invited to RFQs.

A6. Budgets (optional)

1. As **finance** or **admin**, open **Budgets**.
 2. Set department allocations if you want to test budget views.
-

5. Phase B — Full procurement process (one test case)

Use **one requisition** and carry it through every step. Write down the **requisition number**, **RFQ number**, **PO number**, and **invoice number** as you go.

Step 1 — End user: create internal requisition

Login: End user → [Staff login](#)

1. **My Requisitions** → **Create Requisition**.
2. Enter title, work order (optional), and line items.
 - Prefer **searching the stock catalog** if items were added in inventory.
 - Select a **category** for each line.
1. **Submit for approval**.

Expected: Status **Pending** (awaiting department head).

Step 2 — Department head: approve requisition

Login: Department head

1. **Approvals** or **My Requisitions** → open the requisition.
2. **Approve** (or reject with a reason to test rejection flow separately).

Expected: Status moves to **stores review** (or similar). Requester sees update in **Notifications**.

Step 3 — Stores: stock check and issue

Login: Stores officer

1. **Stores PR Review** (internal requisitions queue).
2. For each line:

- **Search inventory** → issue stock if available, or
- **Auto-process stock** to issue what is on hand automatically.

1. If **all lines** are fully issued → **Fulfill from stock**.
2. If **not in stock** → **Forward to procurement**.

Expected: Inventory quantities decrease when stock is issued; otherwise requisition appears for procurement.

Step 4 — Procurement: accept and create RFQ

Login: Procurement officer

1. **Requisitions** → find forwarded/accepted requisitions.
2. **Accept** for procurement processing if prompted.
3. **RFQs** → **Create RFQ** from the requisition.
4. Invite **active suppliers** (at least one; three if testing competitive quotes).
5. Set **submission deadline** and **publish** the RFQ.

Expected: Suppliers receive notification; RFQ appears in supplier **My RFQs**.

Step 5 — Suppliers: submit quotations

Login: Each supplier → [Supplier login](#)

1. **My RFQs** → open the RFQ → **Submit Quote**.
2. Enter prices, delivery terms, and submit.
3. Confirm under **My Submitted Quotations**.

Expected: Procurement sees quotations in **Quotations**.

Repeat for 2–3 suppliers if testing selection among multiple quotes.

Step 6 — Procurement: select quotation and create PO

Login: Procurement officer

1. **Quotations** → open a quotation → review.
2. If fewer than three quotes, use **quotation waiver** with justification (if your process allows).
3. **Select** winning quotation and create **Purchase Order**.
4. Complete PO details and **submit** for approvals.

Expected: PO status **Pending approvals**.

Step 7 — Approvals chain (HOD → Finance → COO if needed)

Login: Each approver in turn

Approver	Where	Action
Department head	Approvals	Approve or reject PO
Finance	Approvals	Approve or reject PO
COO	Approvals	Required only if PO total ≥ USD 5,000

Expected: PO becomes **Approved**. Supplier sees it under **My Purchase Orders**.

Step 8 — Supplier: acknowledge purchase order

Login: Supplier

1. **My Purchase Orders** → open the PO.
2. **Acknowledge** and enter delivery note details if asked.

Expected: PO status updated; stores can receive goods.

Step 9 — Stores: receive and accept goods (GRV)

Login: Stores officer

1. **Deliveries** → **Receive** against the PO (enter delivery note, quantities).
2. Open the delivery record → **Accept into stock** (accept, partial, or reject with notes).

Expected: GRV recorded; **Inventory** increases on acceptance.

Step 10 — Supplier: submit invoice

Login: Supplier

1. **Submit Invoice** (or **My Invoices**) → link to the PO.
2. Enter invoice number, amount, and submit.

Expected: Invoice appears for finance.

Step 11 — Finance: approve invoice and pay

Login: Finance

1. **Invoices** → open invoice → **Approve** (or reject with reason).
2. Open invoice detail → **Record payment**.

Expected: Payment recorded; process complete from request to payment.

Step 12 — Verify audit trail

Login: Admin

- 1. **Notifications** — spot-check events across roles.
- 2. **Audit Logs** — confirm major actions were recorded.

6. Additional features to test (after main flow)

Feature	Who	Where
Store requisitions (issue from stores to staff)	End user / Stores	Store Requisitions
Stock transfers between sites	Stores / Admin	Stock Transfers + Sites
Supplier KYS & verification	Procurement / Admin	Verification Hub, Suppliers
Supplier evaluations	Procurement	Suppliers → Evaluations
Reports by role	Each role	Reports
Profile & password change	Any staff	Profile
Forgot password	Any user	Link on login page
Budgets	Finance / Admin	Budgets

7. Quick checklist (printable)

- ☐ Admin created departments and sites
- ☐ All test users created with **working emails**
- ☐ Inventory items with stock on hand
- ☐ At least one **active** supplier (three for full quote test)
- ☐ End user submitted requisition
- ☐ HOD approved requisition
- ☐ Stores issued stock **or** forwarded to procurement
- ☐ RFQ published and supplier(s) quoted
- ☐ PO created and approved (HOD → Finance → COO if ≥ \$5,000)
- ☐ Supplier acknowledged PO
- ☐ Goods received and accepted into stock
- ☐ Invoice submitted, approved, and paid
- ☐ Notifications and audit logs reviewed

8. Reporting problems

When something fails, send:

1. **Date and time**
 2. **URL** (e.g. `/app/requisitions`)
 3. **Role and email** used (not the password)
 4. **Step number** from this guide
 5. **What you expected vs what happened**
 6. **Screenshot** of the error or screen
 7. **Requisition / RFQ / PO / Invoice number** if applicable
-

9. Admin accounts on live system

Your administrator will provide:

- **Admin email** (e.g. `kudzai@fossilzim.co.zw`)
- **Password** (shared securely, not in this document)

Use that account only for **setup** and **audit**; run the business process using the role accounts you create in **Staff Team**.

10. Glossary

Term	Meaning
IR / Requisition	Internal request for goods or services
RFQ	Request for Quotation — sent to suppliers to bid
PO	Purchase Order — formal order after quote selection
GRV	Goods Received Voucher — proof goods were received
KYS	Know Your Supplier — compliance documentation
OTP	One-time password sent by email at login
HOD	Head of Department

Document version: for live testing on fossilProcureSystem-db / [fossilprocure.vercel.app](#). Contact your project team for admin credentials or access issues.
