SUMMARY

At a glance

Procureline runs every purchase in your organisation from the request to the supplier's payment, in one place, with your procurement rules built in. This manual says how each person uses it: what to click, in what order, and what you should see when it has worked.

1
Address per organisation, with its own data

8
Roles, including suppliers on their own portal

20
Steps from requisition to payment

7
Controls the system enforces on the way

Product	Procureline, a procurement and stores system used in a web browser, at **www.procureline.co.zw**
Your address	Each organisation has its own address under the Procureline domain. Your administrator gives it to you
Signing in	Email and password, then a six-digit code sent to your email
Who uses it	Staff who request goods, department heads, Stores, Procurement, the Head of Procurement, Finance, the COO, administrators, and suppliers
The rules	Three quotations or a recorded waiver; orders approved by the Head of Procurement, Finance and, above a set limit, the COO; no invoice approved without goods received; only activated suppliers can win work; every action logged
Going live	The separate **Launch Manual** covers the infrastructure, set-up, pilot and go-live
Help	Part 11: common problems and the glossary. Your first call is your administrator; suppliers call the buyer's Procurement team

Who should read what

IF YOU ARE	READ
Any member of staff	Parts 1 and 2, then your own part
A requester or department head	Part 3
Stores	Part 4
Procurement	Parts 5 and 6, and Part 10 so you can help suppliers
Head of Procurement or COO	Part 7, and Part 5 or 6 for background

IF YOU ARE	READ
Finance	Part 8
An administrator	Part 9, and the Launch Manual
A supplier	Part 10 only, and Part 11 if something goes wrong

How to read the steps

- **Sourcing › RFQs** is a menu path: open **Sourcing** in the left-hand menu, then click **RFQs**.
- `Submit` is a button or link exactly as labelled on screen. `Pending HOD` is a status badge as it appears in a list.
- `PROCUREMENT OFFICER`
  before a procedure names the role that performs it. Other roles do not see those buttons.
- Numbered steps are done in order. The grey line after a procedure says what you should see when it has worked.
- Every rejection, return, cancellation, waiver and override needs a reason. The reason stays on the record, in the audit log, and is shown to the person who raised the record.

PART 1

Getting started

This part applies to everyone, staff and supplier alike: where to sign in, how the six-digit code works, how to recover a password, and how the screen is laid out.

1.1 Your organisation's address

Procureline lives at **www.procureline.co.zw**. Each organisation using it has its own address under that domain, and its data is kept apart from every other organisation's. Opening your address tells the system who you belong to. Your administrator gives you the address. A user of one organisation cannot sign in at another's address, and a supplier registers separately with each organisation it supplies. Where one address serves more than one organisation, the sign-in page adds a **Business Unit** list; choose yours there.

1.2 Signing in

Sign-in has two steps: your email and password, then a six-digit code sent to your email. The code proves that whoever has your password also has your mailbox.

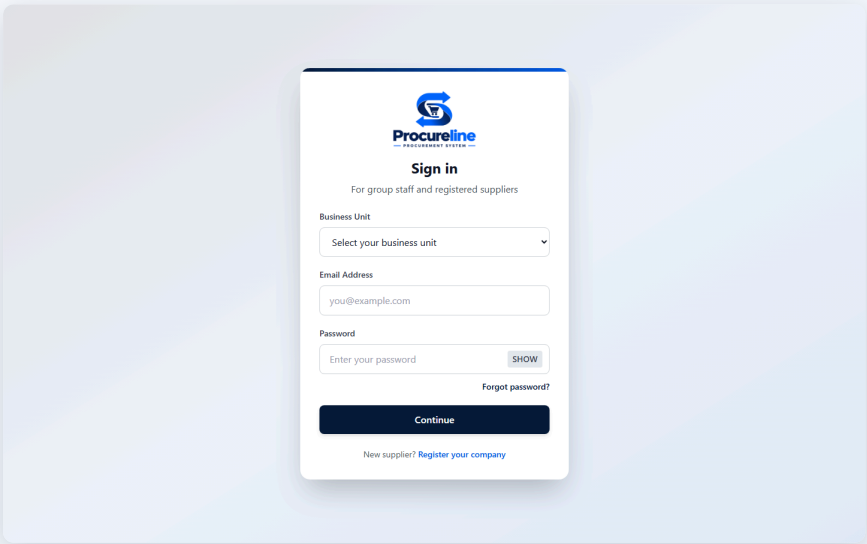

Figure The sign-in page. Suppliers register through the link at the bottom.

1. **Open your organisation's address.** The page says **Sign in**, with the line *For group staff and registered suppliers*. If a **Business Unit** list is shown, choose your organisation.
2. **Enter your Email Address and Password** and click **Continue**. SHOW lets you check what you typed.
3. **Open your email.** The page now says **Enter verification code** and names the address the code went to. The code has six digits and expires after 10 minutes.

4. **Type the code** and click **Verify & sign in**. If it has expired, click **Back to sign in** and start again; a new code is sent.

   You land on your **Dashboard**, with your name and role on the card at the top of the left-hand menu.

> **No code arrived?** Check the spam folder, and check that the address on your user record is the one you are reading. Codes go to the address your administrator entered. If it is wrong, the administrator corrects it under **Organisation › Staff Team**; a supplier asks the buyer's Procurement team.

1.3 Forgotten password

1. On the sign-in page click **Forgot password?**.
2. Enter your **Email** and click **Send reset link**. The page says a link has been sent if an account exists; it does not reveal whether the address is known.
3. Open the email and follow the link. The page **Set new password** asks for a **New password** and **Confirm password**, at least 6 characters.
4. Click **Update password**, then sign in as usual. If the page says the link is invalid or incomplete, request a new one.

To change a password you still know, open your profile (1.4) and use **Current Password**, **New Password** and **Confirm New Password**. A supplier whose first password was generated by Procurement should change it at the first sign-in.

1.4 The screen

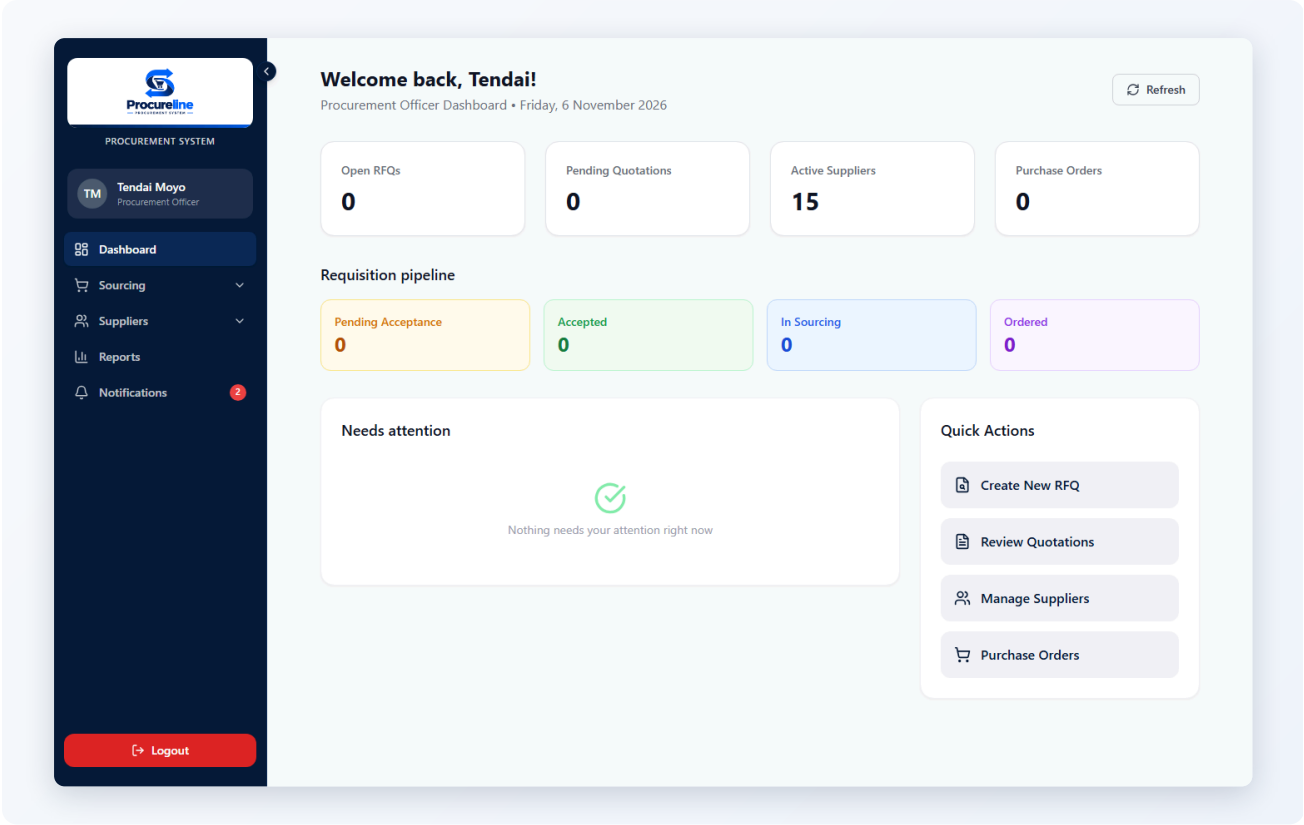

Figure The layout is the same on every page: your card and the menu on the left, the page title and its main action at the top, and the content below. This is a procurement officer's dashboard.

ELEMENT	HOW IT WORKS
Menu	Shows only what your role can do. Sections such as **Sourcing** or **Payables** open one at a time, and the section holding your current page opens by itself. The arrow at the menu's edge collapses it to icons
Badges	An amber count beside a menu item is work waiting for you: approvals, authorisations, activations to decide. A red count on **Notifications** is unread messages. Collapsed, a count becomes a dot
Profile	Click your name on the card above the menu to see your details and change your password. An administrator also sees the organisation's settings there (9.4)
Notifications	**Notifications** lists everything that has reached your step, newest first, each linking to its record. The same events are emailed to you
Drawers and wizards	Creation forms open in a drawer over the list, often in named steps with **Back** and **Next**. Closing a drawer with unsaved entries asks whether to discard them
Lists	Every list has a search box, a status filter and a **View** button per row. Long lists are paged; choose how many rows to show per page at the foot

ELEMENT	HOW IT WORKS
Checks	Forms check your entries before sending. A field that needs fixing turns red with a message under it, and the cursor moves to the first one; the message goes as soon as the field is right. **Next** checks the step you are on, and the final button checks every step and opens the one with a problem. The server applies the same checks, so a duplicate (an email or invoice number already used) is reported under its field too
Reasons	Every rejection, return, cancellation, waiver and override needs a reason in a few words. Where a fixed list is offered, pick from it; *Other* needs an explanation
Overdue	Approval queues mark items that have waited longer than the one-hour target; the RFQ list marks sourcing that has taken longer than two days
Numbers and money	Record numbers are your organisation's own. Values are in your organisation's currency; approval limits are applied in US dollars at the stored exchange rate
Signing out	Use **Logout** at the foot of the menu, always on a shared computer. A session that is left open stays valid for several days

1.5 Your dashboard

The dashboard is the first page after sign-in and differs by role. It shows counts for your own pipeline, the items waiting on you under **Needs attention**, and **Quick Actions**. Two things are true for everyone: a count on the dashboard is a link to the list behind it, and an item appears in your queue only when it is at your step. If something you expect is missing, it is still with the person before you. Each role's part describes its dashboard.

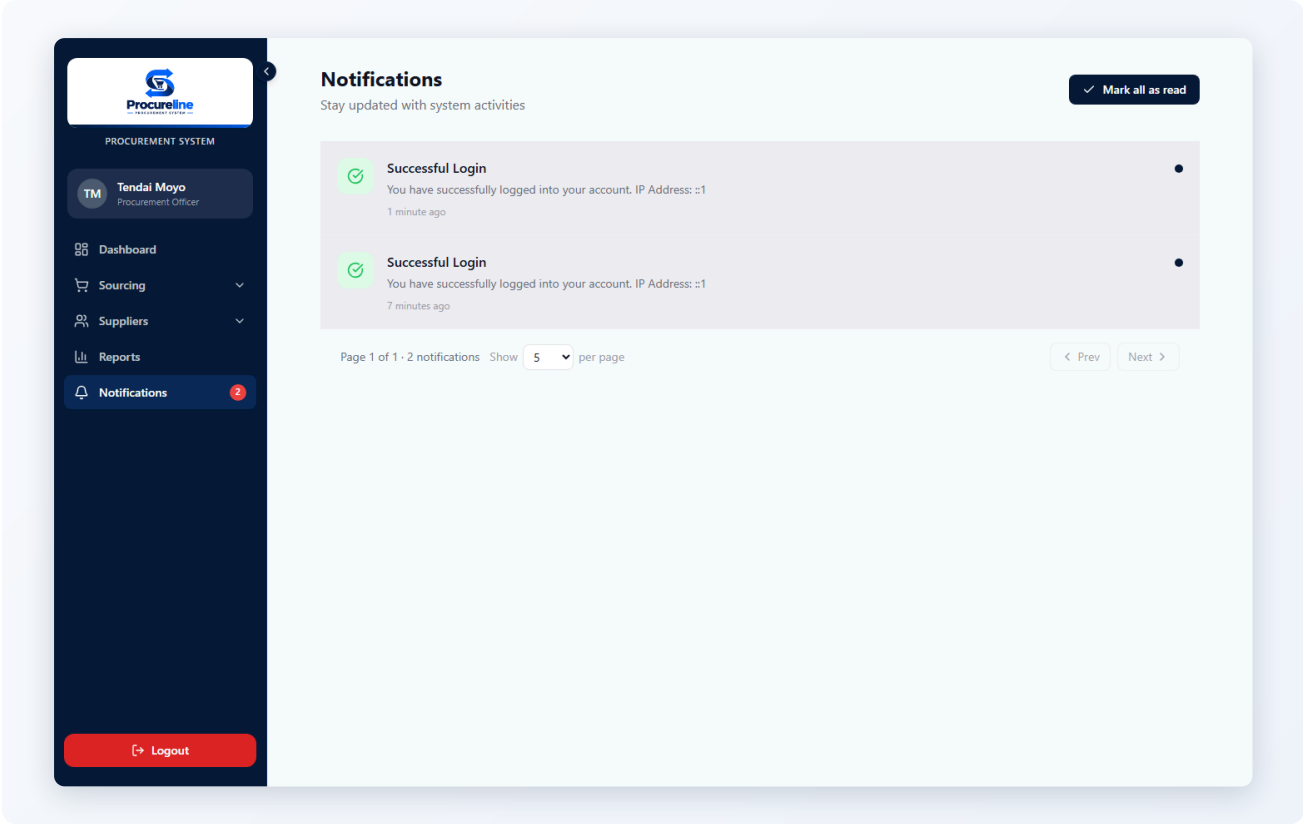

Figure Notifications: everything that has reached your step, newest first. Mark all as read clears the red badge.

PART 2

Who does what

Eight roles use the system, and each sees and does only its own work. No single person can complete a purchase alone: the requester cannot approve, the approver cannot receive, and the receiver cannot pay.

2.1 The roles

ROLE	WHO HOLDS IT	WHAT THEY DO IN THE SYSTEM	WHAT THEY CANNOT DO
End user	Staff in any department or site	Raise requisitions for their department and track them to delivery	Approve anything; see other people's requests
Department head	Head of each department; a deputy can act for them	Approve or reject the team's requisitions; raise their own, which go straight to Stores; collect delivered goods from Stores	Approve their own requisition; approve purchase orders; pick a winning quotation
Stores officer	Stores and warehouse staff	Check stock against requisitions; issue stock; receive goods on a GRV and reject what is faulty; move stock between sites; set reorder levels and request restocks	Approve orders or invoices
Procurement officer	Procurement staff	Accept requisitions; issue RFQs; select the winner with a justification; raise orders; onboard suppliers and submit them for activation; handle bank-detail changes; evaluate suppliers	Activate a supplier alone; authorise their own award; approve orders
Head of Procurement	The department head of the Procurement department	Everything a procurement officer does, plus: authorise awards; first approval on every order; approve waivers; approve, return or reject supplier activations	Select a winner and authorise the same award; approve an activation they submitted
Finance manager	Finance team	Second approval on orders; match and approve invoices; record payments; set department budgets	Raise orders or receive goods
COO	COO of the organisation	Final approval on orders at or above the organisation's limit (default USD 5,000); approve waivers; approve, return or reject supplier activations	Raise or receive anything; edit supplier records
Supplier	External companies	Register once; upload KYS documents; quote on RFQs; acknowledge orders; follow deliveries; submit invoices; request bank-detail changes	See internal approvals or other suppliers' bids

ROLE	WHO HOLDS IT	WHAT THEY DO IN THE SYSTEM	WHAT THEY CANNOT DO
Administrator	IT administrator for the organisation	Manage users, departments and sites; read the audit log; view orders and reports	Any business step: approvals, awards, receiving, payments

Two-person rules. An award needs one person to select it and the Head of Procurement to authorise it. A supplier activation needs one person to submit it and the Head of Procurement or the COO to approve it. A bank-detail change needs a call-back by one person and approval by another, neither of them the requester.

2.2 The purchase, step by step

A purchase moves through 20 steps in five phases. Each step unlocks only when the one before it is complete. The tinted rows are controls the system enforces.

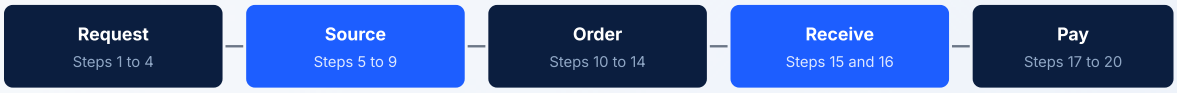

Figure The five phases of a purchase. The rehearsal purchase in the launch checklist runs all twenty steps once, with an order above the COO limit.

#	STEP	WHO	WHAT THE SYSTEM CHECKS	SEE
1	Raise and submit a requisition	End user or department head	At least one item; a title	3.1
2	Approve the requisition	Department head or deputy	Not the requester; over budget needs a reason and Finance is told	3.5
3	Stock review	Stores officer	Items in stock are issued; only the shortfall goes on	4.1
4	Accept for sourcing	Procurement officer	Within 2 days, or it is marked overdue	5.2
5	Publish the RFQ to invited suppliers	Procurement officer	A deadline; suppliers matched by category, topped up to three	5.3
6	Submit sealed quotations	Suppliers	Bids stay sealed until the RFQ closes	10.4
7	Close the RFQ; bids ranked	Procurement officer	Fewer than three quotes needs a waiver from the COO or Head of Procurement	5.4, 5.5

#	STEP	WHO	WHAT THE SYSTEM CHECKS	SEE
8	Select the winner with a justification	Procurement officer	A written reason, for the whole quotation or line by line	5.6
9	Authorise the award	Head of Procurement	A different person from the selector; the supplier must be activated with KYS complete	7.1
10	Raise and submit the purchase order	Procurement officer	One order per accepted quotation	5.8
11	Approve the order	Head of Procurement	Always	7.2
12	Approve the order	Finance	Always	8.1
13	Approve the order	COO	Only at or above the organisation's limit in USD; below it, skipped	7.2
14	Order sent; supplier acknowledges	System, then supplier	The order PDF is emailed on the last approval; acknowledging marks it issued	10.5
15	Receive the goods on a GRV	Stores officer	Delivery note, who delivered, counts, witnesses, MSDS for hazardous goods	4.3
16	Reject what is faulty	Stores officer	On the same GRV: rejected goods stay out of stock and remain owed; the supplier is told why	4.4
17	Submit an invoice against the order	Supplier	Only issued orders; lines come from received quantities	10.7
18	Three-way match; approve the invoice	Finance	Order, GRV and invoice must agree within 2%; a variance needs a written reason	8.2
19	Record the payment	Finance	Tuesday or Thursday run	8.3
20	Evaluate the supplier	Procurement officer	Seven criteria, scored 1 to 5	5.10

Any approver can reject with a reason, which sends the record back with that reason on file. A requisition, RFQ or purchase order can also be cancelled with a reason from a fixed list.

2.3 Your menu

The left-hand menu is different for each role. These are the menus as built; **Dashboard** and **Notifications** appear for everyone and are left out below.

PART 3

Requisitions

For anyone who asks for goods or services, and for the department heads who approve those requests. A requisition is the start of every purchase: what you need, how many, and why.

Your dashboard. An end user sees My Requisitions, Drafts, Awaiting HOD Approval and Fulfilled, with a reminder of drafts not yet submitted and anything rejected recently. A department head sees Dept. Requisitions, Awaiting My Approval, Approved and POs Pending Approval, and a **Needs attention** list of requisitions awaiting their approval.

3.1 Raise a requisition

END USER OR DEPARTMENT HEAD

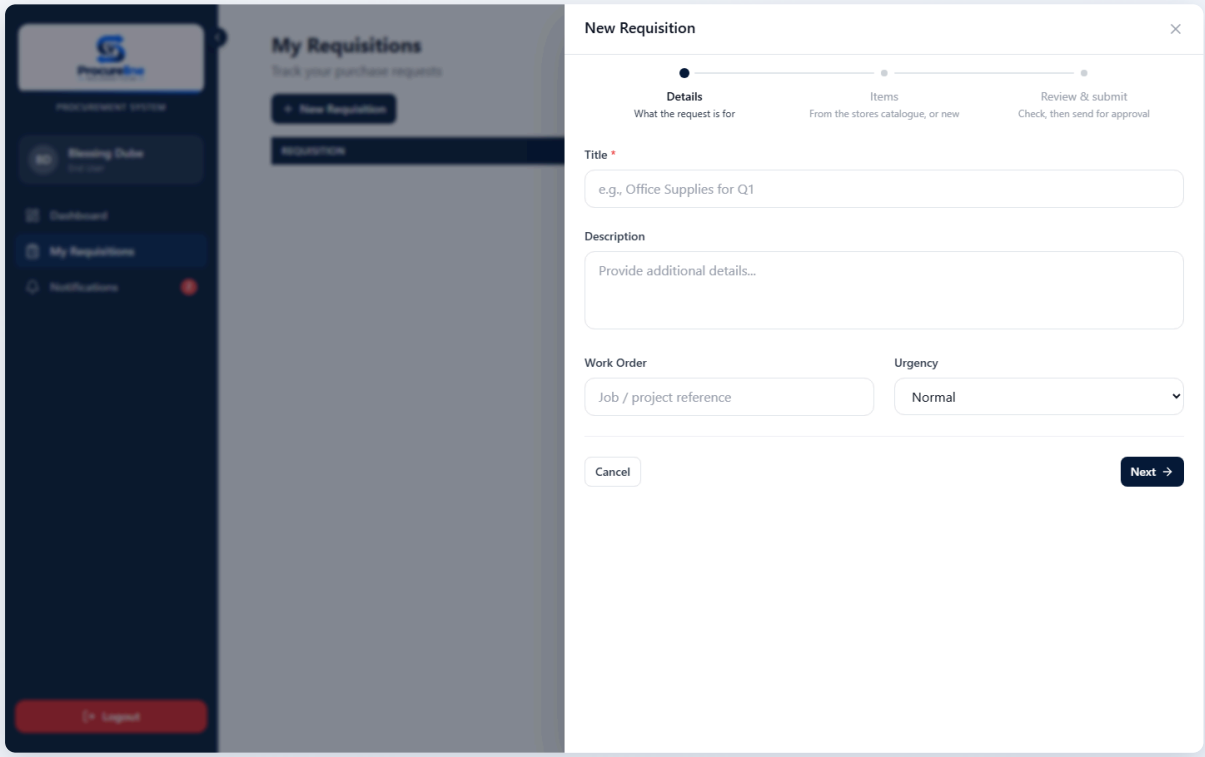

Figure The New Requisition drawer opens over the list. Three steps: Details, Items, Review & submit.

1. **Open My Requisitions** and click **New Requisition**. The form opens in a drawer with three steps: **Details**, **Items**, **Review & submit**.
2. **Details.** Give a **Title** (required), a **Description**, a **Work Order** reference if there is one, and the **Urgency**: Normal or High Priority. Click **Next**.

3. **Items.** Click `Add Item`. In **Item**, search the stores catalogue; pick a catalogue item (the row shows its code, unit and how many are available) or choose *Add "..." as a new item* for something not in the catalogue. Set **Package**, **Quantity**, **Unit**, an estimated unit price if you know it, and a **Specification**. Click `Add`. Repeat for each line.
4. **Equipment and photos (optional).** For a spare part or a repair, open **Equipment details & photos** on the item and record make, model, plant number, serial numbers and the OEM part number. Add photos of the data plate, the part or the fault, with a caption. Suppliers see these with the RFQ, which cuts wrong parts.
5. **Review & submit.** Check the summary and the **Estimated total**. Estimated prices let your department head check the request against the budget.
6. Click `Submit for Approval`, or `Save Draft` to finish later.

   The requisition appears in your list as **Pending HOD Approval** and your department head is notified. A draft shows as `Draft` until you submit it.

> Closing the drawer with unsaved entries asks *Save this requisition?* with the choices `Discard`, `Keep editing` and `Save draft`. A draft needs at least a title.

3.2 Submit and track it

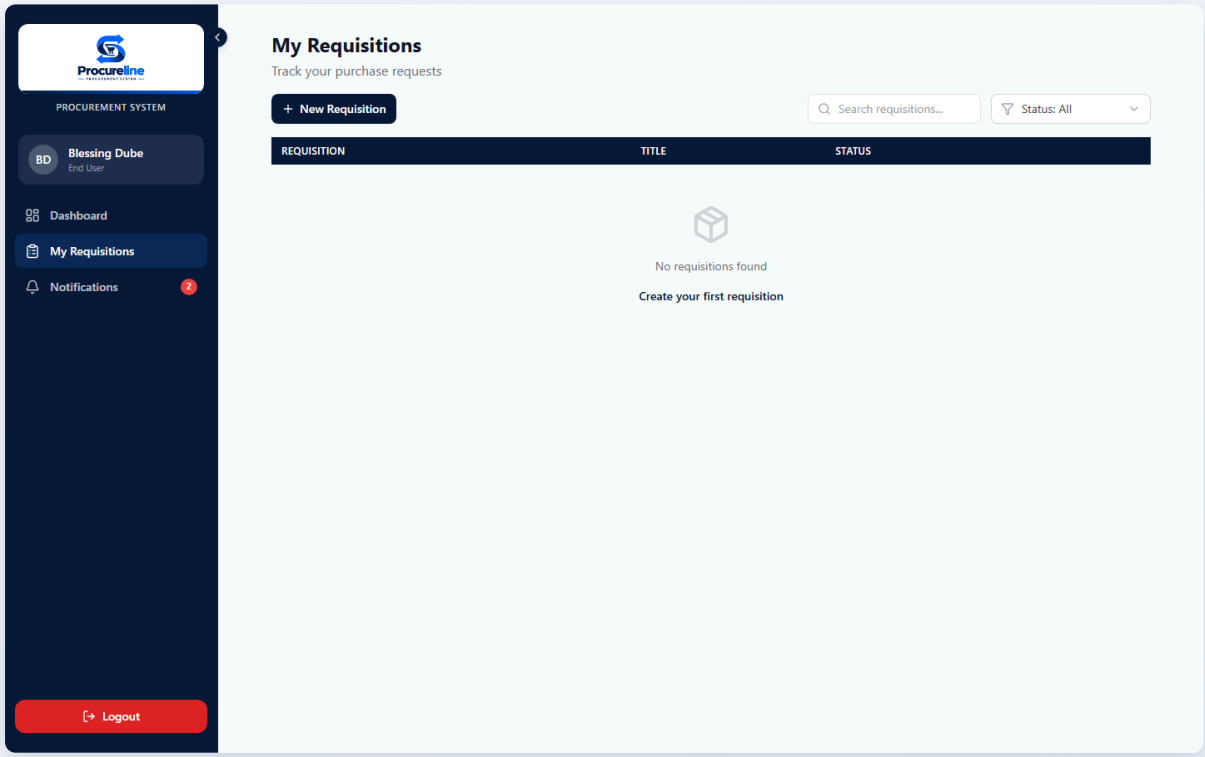

Figure My Requisitions: the list an end user sees, with New Requisition above it and search and status filters on the right.

- **Submit a draft** from the list with `Submit`, or open it with `View` and submit from there. A draft with no items cannot be submitted.

- **Track it** in **My Requisitions**. The status badge follows the request through sourcing and ordering (3.7). Open it with View for the full picture: the line items with quantity delivered, a **Purchase order** card showing which approval the order is waiting on, an **RFQ** card, a **Stores** card and an **Activity** timeline.
- **Search and filter** the list by status; the row shows the department and the number of items, and a chip for high-priority requests.
- **Rejected?** The reason is on the record under Activity. Correct the request and raise it again; a rejected requisition is not reopened.

3.3 Collect goods from stores

When Stores has issued items from stock, or has received a delivery for your requisition, the goods are collected through a *store requisition*. The department head raises it.

DEPARTMENT HEAD

1. In **Requisitions › Team Requisitions** or on the requisition itself, click **Req. from Stores** (shown once goods are delivered to Stores).
2. Stores marks it Ready to collect and you are notified with any note from Stores.
3. Send someone to collect. Stores records who collected on the **Hand over** form and prints an issue note for them to sign.

   The requisition's Stores card shows **Collected**; the request is complete.

If the order arrives in more than one delivery, collect each part as it comes. After a later delivery, **Req. from Stores** appears again and asks only for what has not yet been collected.

3.4 Cancel a requisition

Open the requisition and click **Cancel requisition**. Choose a **Reason for cancellation** from the list: No longer required, Duplicate request, Budget no longer available, Specification changed, Sourced elsewhere, Project or work order cancelled, or Other with details. Confirm with **Confirm cancellation**. An end user can cancel a draft or a request still with the department head; a department head can also cancel one in stores review. Once Procurement has accepted it, only Procurement can cancel it. Cancelling also cancels open RFQs and draft orders linked to it, and cannot be undone.

3.5 Approve or reject a requisition

DEPARTMENT HEAD OR DEPUTY

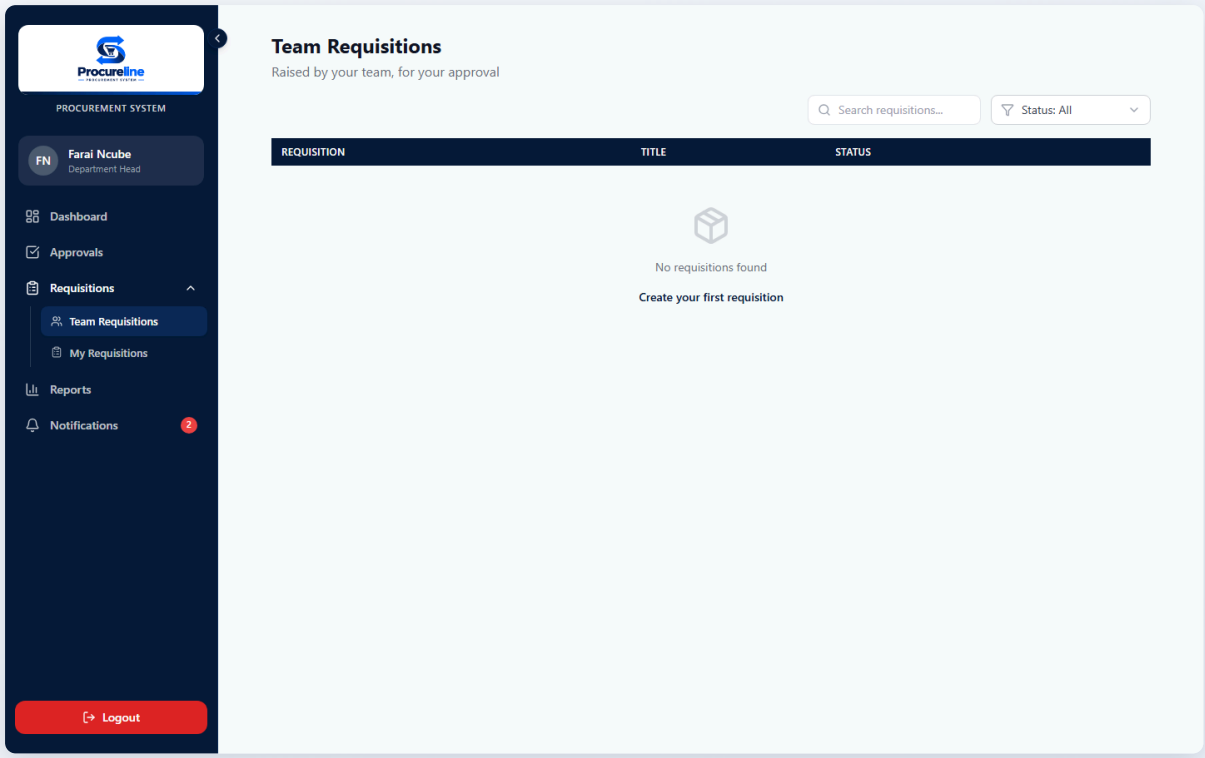

Figure Team Requisitions: requests raised by the department, for the head to approve or reject.

1. Open **Requisitions › Team Requisitions**, or click **Requisitions awaiting your approval** on the dashboard. Each row has `Approve` and `Reject`.
2. **Check the lines first** if you want to change them: open the request with `View`. While it is with you, each line has `Edit` to change the quantity and `Remove` to drop it. Remove anything you do not want purchased before approving.
3. **Approve.** Click `Approve`, add **Comments** if useful, and confirm. If the request takes the department over its budget, the box **Over budget** shows the available amount, the request and the shortfall, and a **Reason for approving over budget** is required. The button becomes `Approve over budget`; the reason is recorded and Finance is notified.
4. **Reject.** Click `Reject` and give the **Reason for Rejection**, which the requester sees.

Toast **Requisition approved and sent to stores**. The request moves to `Stores Review`. The one-hour target applies; the Approvals queue marks items that have waited longer.

> **Purchase order approvals.** Since 28 October 2026 department heads no longer approve purchase orders. The **Approvals** page for a department head shows only older orders that were already at that stage, and the Head of Procurement's queue. Orders are approved by the Head of Procurement, Finance and, above the limit, the COO.

3.6 A department head's own requisition

A department head cannot approve their own request, so submitting is the approval. In the form the last step says *Check, then send to Stores* and the button is **Send to Stores**; on the list a pending request of their own has **Send to Stores**. If it is over budget, it is reported to Finance as an override. The request then follows the normal path from stock review onwards.

3.7 Requisition statuses

BADGE	MEANING	WHO ACTS NEXT
Draft	Saved, not submitted	The requester
Pending HOD Approval	Waiting for the department head or deputy	Department head
Stores Review	Stores is checking what is in stock	Stores
Fulfilled from Stock	Everything was in stock and has been issued; nothing to buy	Collect from Stores
Pending Acceptance	With Procurement, to accept for sourcing	Procurement
Accepted, Sourcing, Quoted	An RFQ is being prepared, is open, or has quotations to evaluate	Procurement
PO with Head of Procurement, PO with Finance, PO with COO	The purchase order is at that approval stage	That approver
Ordered from supplier, Partly delivered	The supplier has the order; some goods may have arrived	Supplier, then Stores
Delivered to Stores	Goods received and accepted; ready to request from Stores	Department head (3.3)
Collected, Completed	Done	
Rejected, Cancelled, PO rejected	Stopped, with the reason on the record	Raise again if still needed

PART 4

Stores

Stores sits at both ends of a purchase: it checks what is already on the shelf before anything is bought, and it receives what arrives before anything is paid. Nothing enters or leaves stock without a record.

Your dashboard. Inventory Items, Low Stock Items, Pending Deliveries and Approved POs, with a **Needs attention** list of requisitions to review, items below reorder level and deliveries pending receipt. Quick actions: View Inventory, Pending Deliveries, Stock Alerts.

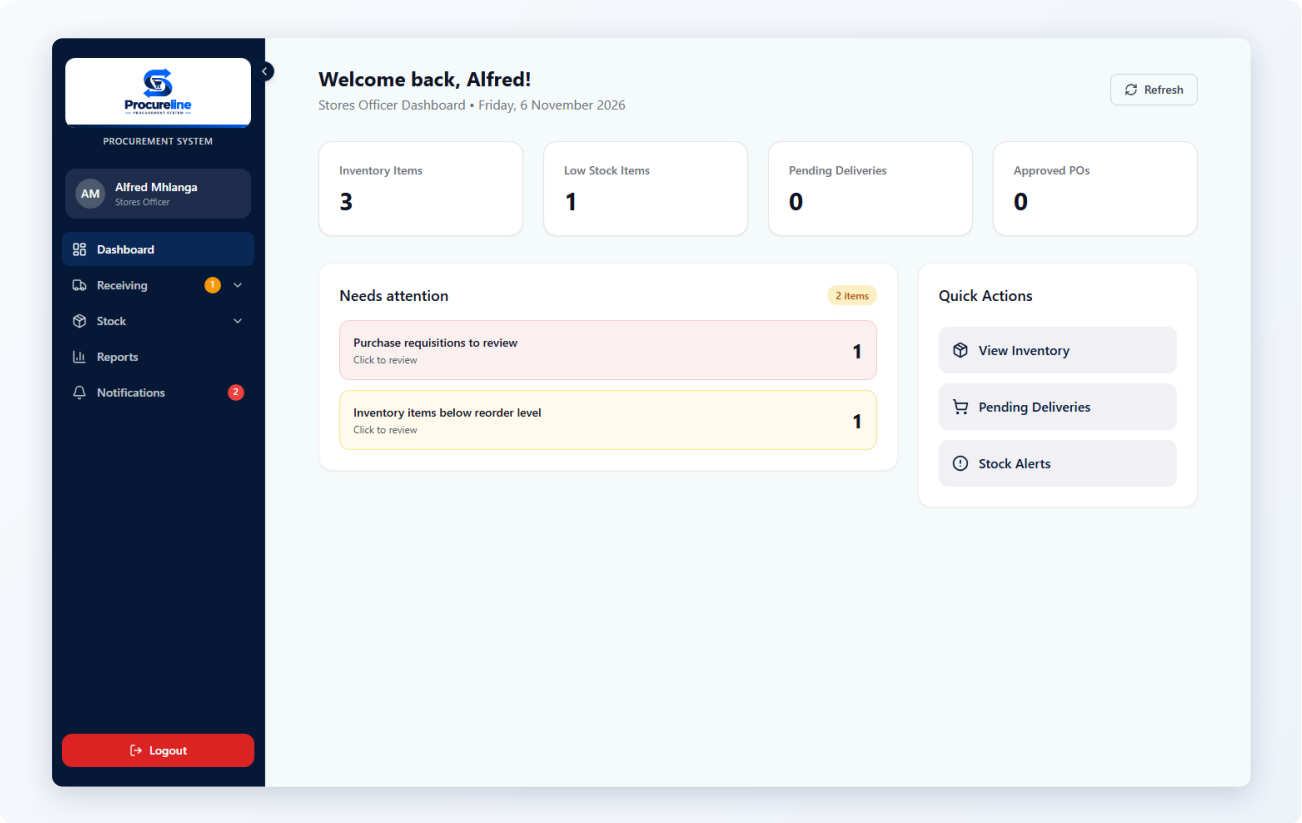

Figure The Stores dashboard: stock, low stock and deliveries at a glance, with the queue under Needs attention.

4.1 Stock review of a requisition

STORES OFFICER

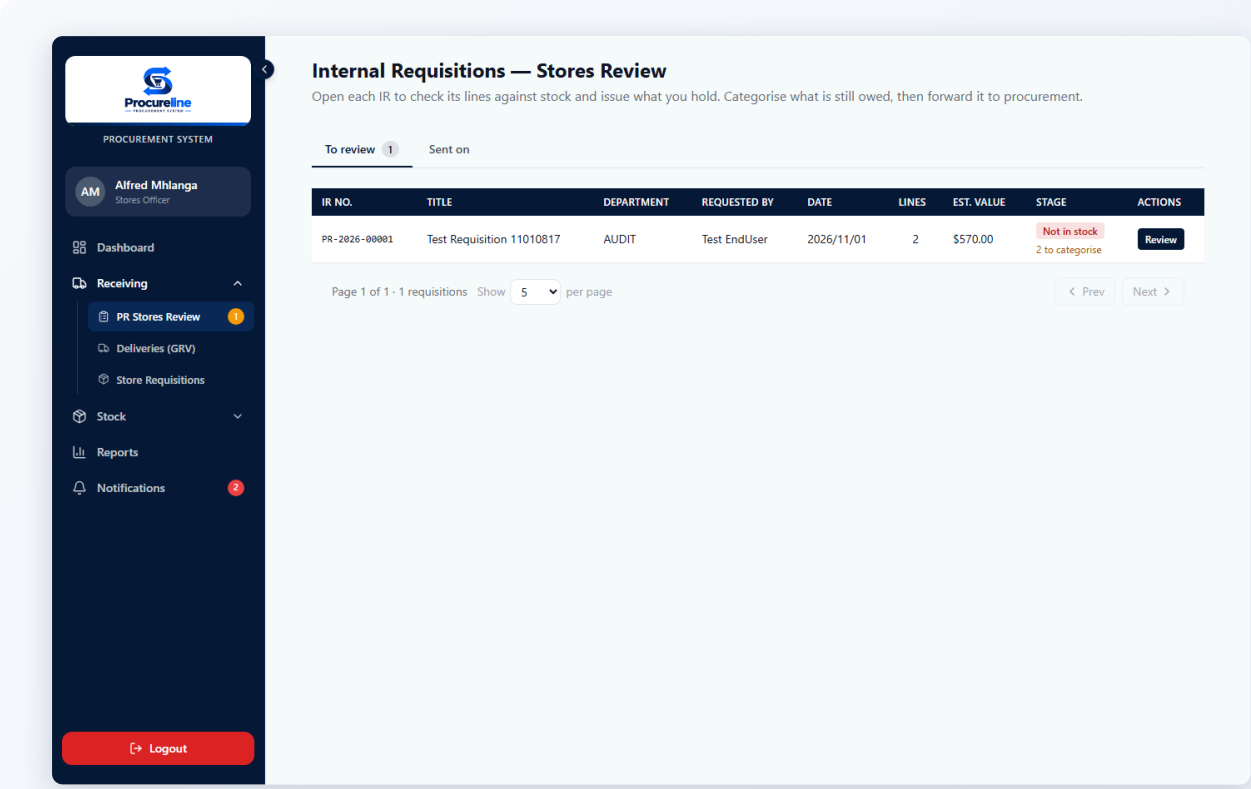

Figure Internal Requisitions, Stores Review: the To review tab lists approved requisitions waiting for a stock check.

Every approved requisition comes to Stores first, under **Receiving › PR Stores Review** (titled *Internal Requisitions — Stores Review*). Only what is not in stock goes on to Procurement.

1. On the **To review** tab, click `Review` on a requisition. The drawer lists each line with **In stock** (*n here*, *n at other sites*, or *Search to check* for a new item) and a **Category**.
2. **Issue what you have.** Click `Issue from stock` on a line that is in stock. You are taken to Inventory with the banner *Issuing for IR-…*; confirm the item and click `Issue`. An issue is all or nothing: if there is not enough stock the system says so and nothing moves.
3. **Categorise the rest.** Every line that still has to be bought needs a **Category**; the drawer warns how many lines are still uncategorised. The category is what matches the request to suppliers.
4. **Send it on.** Click `Forward to procurement`. If every line was issued, the button is `Fulfill from stock` and the requisition is closed. `Auto-process` issues whatever is in stock and forwards the rest in one go.

   Toast **Forwarded to procurement**. The requisition moves to the **Sent on** tab, where you can follow it: *Awaiting procurement*, *Out for quotation*, *Purchase order raised*, with the expected delivery date and a `Receive in Deliveries` shortcut once an order exists.

4.2 Store requisitions: hand-overs

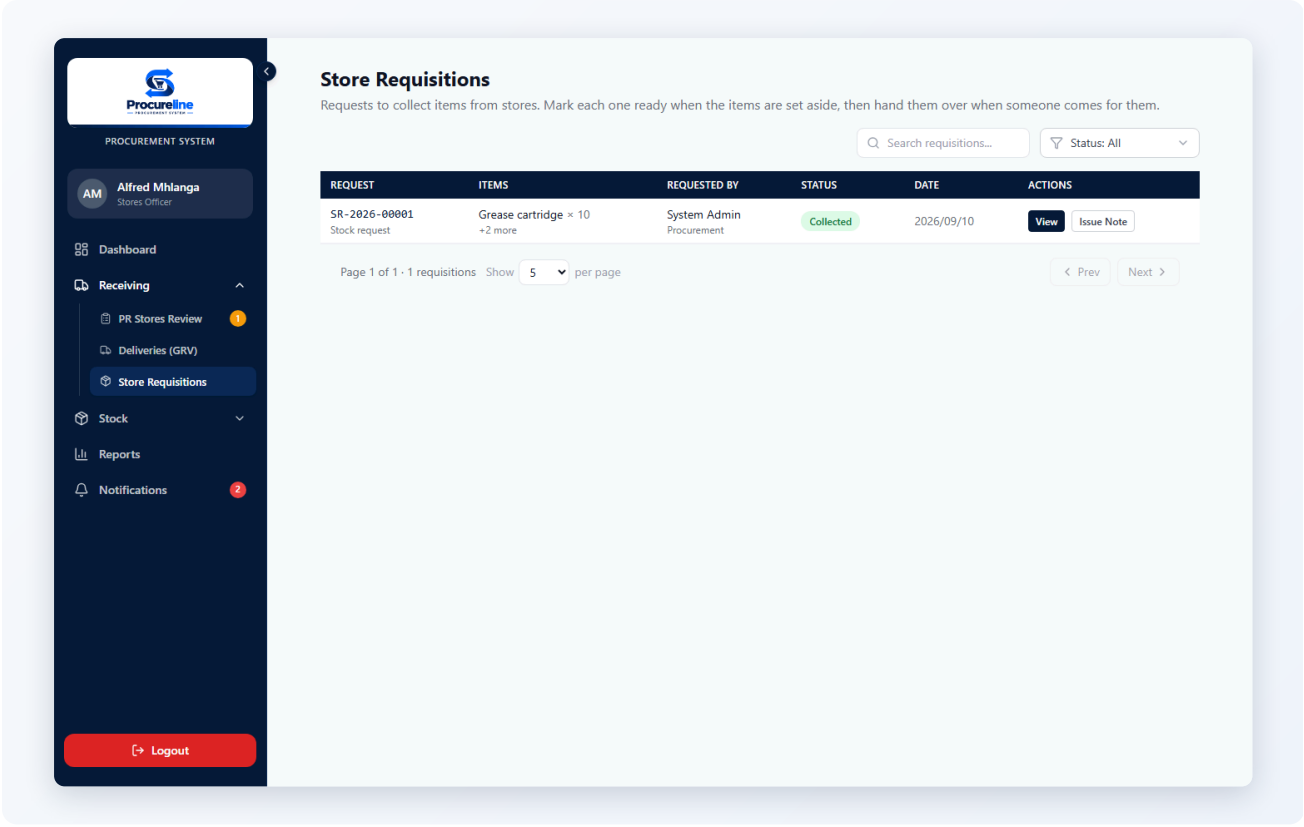

Figure Store Requisitions: collection requests to mark ready, hand over and print an issue note for.

A department collects issued or delivered goods through a store requisition, under **Receiving › Store Requisitions**.

1. A new request shows as **New request**. Pick the goods, then click **Mark ready** and add a **Note to the requester** if useful (where to collect, when). The requester is told.
2. When they arrive, click **Hand over** and record the collector's **Full name**, **ID / Employee no.**, **Department** and **Contact number**. Leave these blank only if nobody is available to sign.
3. Click **Issue Note** to print the note for the collector to sign and file.
4. To refuse a request, click **Reject** and give the **Rejection Reason**.

   The request shows **Collected** (or **Part collected** if some lines remain), and the requisition's Stores card updates.

4.3 Receive a delivery (GRV)

STORES OFFICER

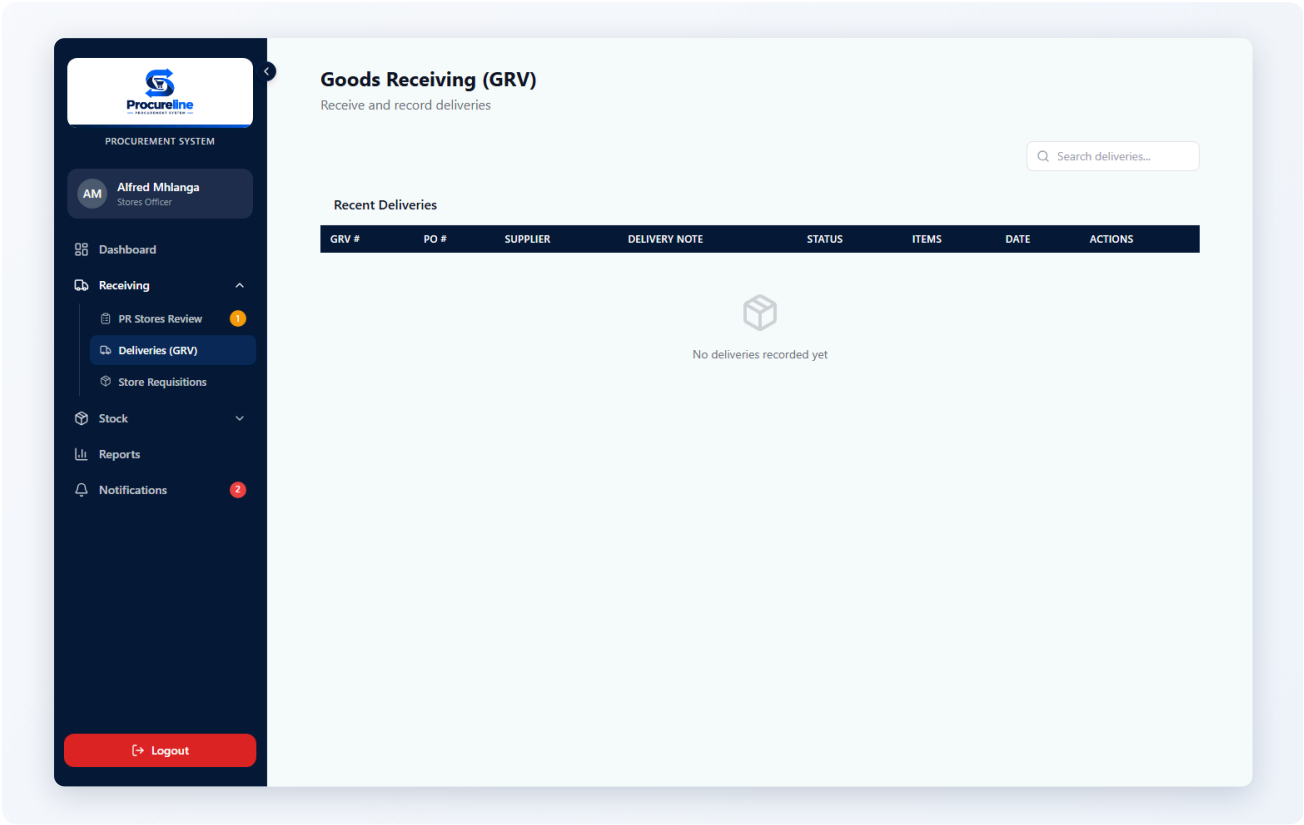

Figure Goods Receiving (GRV): the banner counts orders awaiting delivery; recent deliveries are listed below with their GRV numbers.

Under **Receiving › Deliveries (GRV)**, the banner lists every purchase order with goods still due, including the balance of an order already part-delivered. Click **Show all** when there are more than three. Nothing can be invoiced until the goods are on a GRV.

1. Click **Receive** on the order. The **Receive Goods** wizard has four steps.
2. **Delivery.** Enter the **Delivery Note Number** and who **Delivered** the goods: full name (required), ID number, vehicle registration and contact number. You are recorded as the receiving officer.
3. **Count items.** For each line, enter what was **Received**. Count physically; do not copy the delivery note. A part-delivered order shows how many are still due. If any arrived damaged, wrong or not to specification, enter them under **Rejected** with a **Reason for rejecting** (4.4).
4. **Inspection.** Record who inspected, and the **Witnesses present** (MT, Security, SHEQ). Tick **Delivery contains hazardous materials** if it does and enter the **MSDS reference**; a hazardous delivery cannot be received without one.
5. **Review & receive.** Click **Confirm Receipt**.

   Toast **Goods received successfully**, or **Goods received. 1 rejected and still owed by the supplier.** The GRV has a number, the accepted goods are in stock, the order shows partly or fully received, and the supplier is told what was accepted and rejected. Use **Print** on the row for the GRV document.

> **Short deliveries.** Enter only what actually arrived. A line received short leaves the order *partly received*; it stays in the banner, and the balance is received on a later GRV in the same way.

4.4 Rejected goods

Goods are accepted or rejected when they are counted, on the receive form in 4.3. There is no separate acceptance step afterwards.

- Rejected goods are not added to stock and do not count against the order. The order stays *partly received* until the supplier replaces them, and they are received on a later GRV.
- The GRV shows Partially accepted, or Rejected when nothing was accepted. The printed GRV lists each rejected quantity with its reason.
- The supplier is told what was rejected and why, and has five days to collect the goods.
- Only accepted goods count in the three-way match, so the supplier cannot be paid for what was rejected.

4.5 Inventory and catalogue

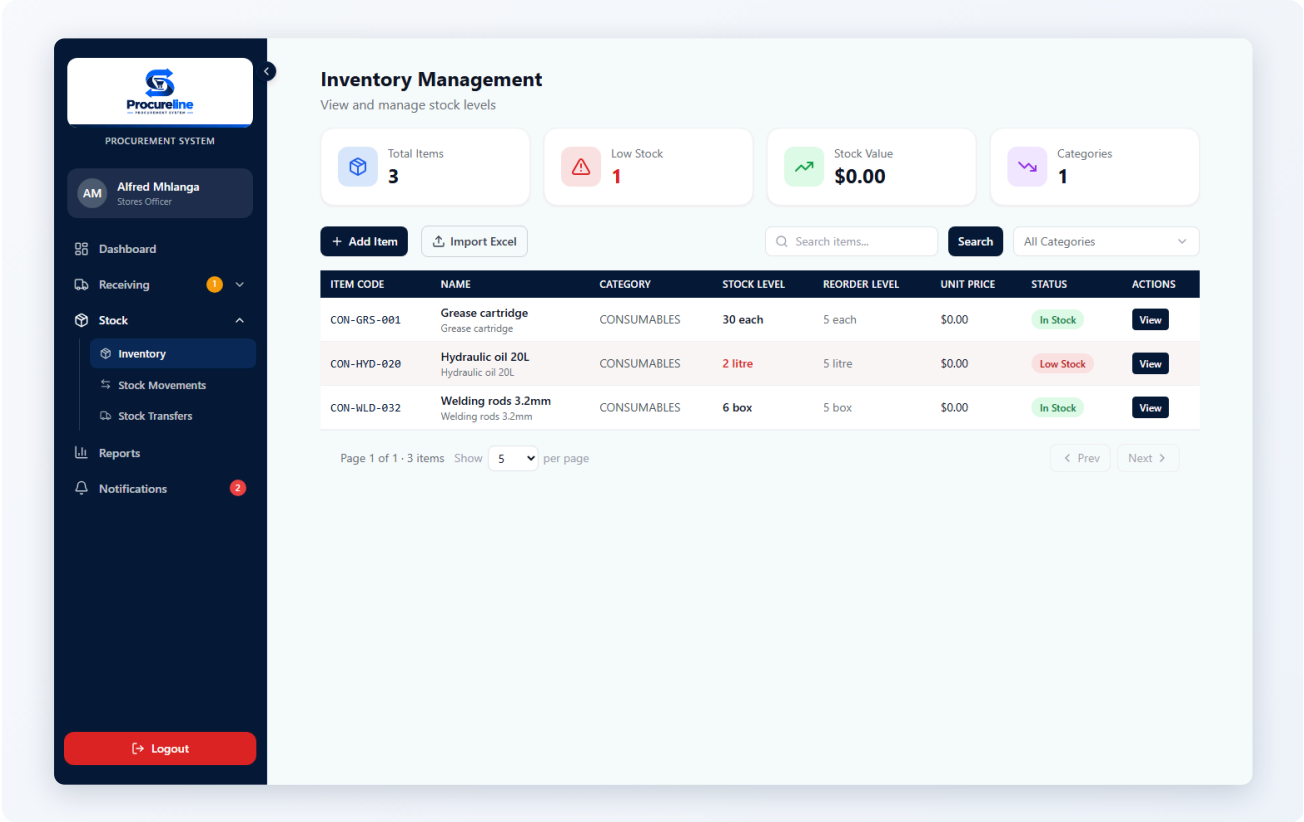

Figure Inventory: stock level against reorder level, with Low Stock marked. Add Item and Import Excel sit above the list.

Stock › Inventory shows every item with its stock level, reorder level and status, one row per site that holds it, with the site under the name: Out of Stock when nothing is on hand, Low Stock at or below the reorder level, otherwise In Stock. The tiles count items, low stock, stock value and out of stock; click **Low Stock** or **Out of Stock** to list only those. The dashboard, the reports and the alerts all count low stock the same way.

- **Add an item.** Add Item opens a three-step form: **Item** (code, auto-generated if empty; category; name; description), **Stock** (unit, unit price, current quantity, reorder level) and **Review & add**.
- **Reorder levels.** Each item has a reorder level, and each site can set its own. Open View on the item, enter this site's **Reorder level** and, if you always order the same amount, a **Reorder quantity**, then click Save levels. This never changes the quantity on hand. The view also shows how much was issued in the last 90 days; about one month's use is a common starting level. An item with no level uses 5 and is marked *default, not set*.
- **Held for collection.** When you mark a collection ready (4.2), its stock is held for it and shown under the stock level. Nobody else can be issued that stock until it is handed over or the request is rejected.
- **Opening balances and bulk loads.** Import Excel opens **Bulk Import Inventory**: download the template, fill it, upload, check the preview, then Import. Use this for the opening stock count at launch.
- **Issue.** Stock leaves inventory only through an issue (4.1), a hand-over (4.2) or a transfer (4.6). Never correct a balance by editing it; record the movement that was missed.

4.6 Stock movements and transfers

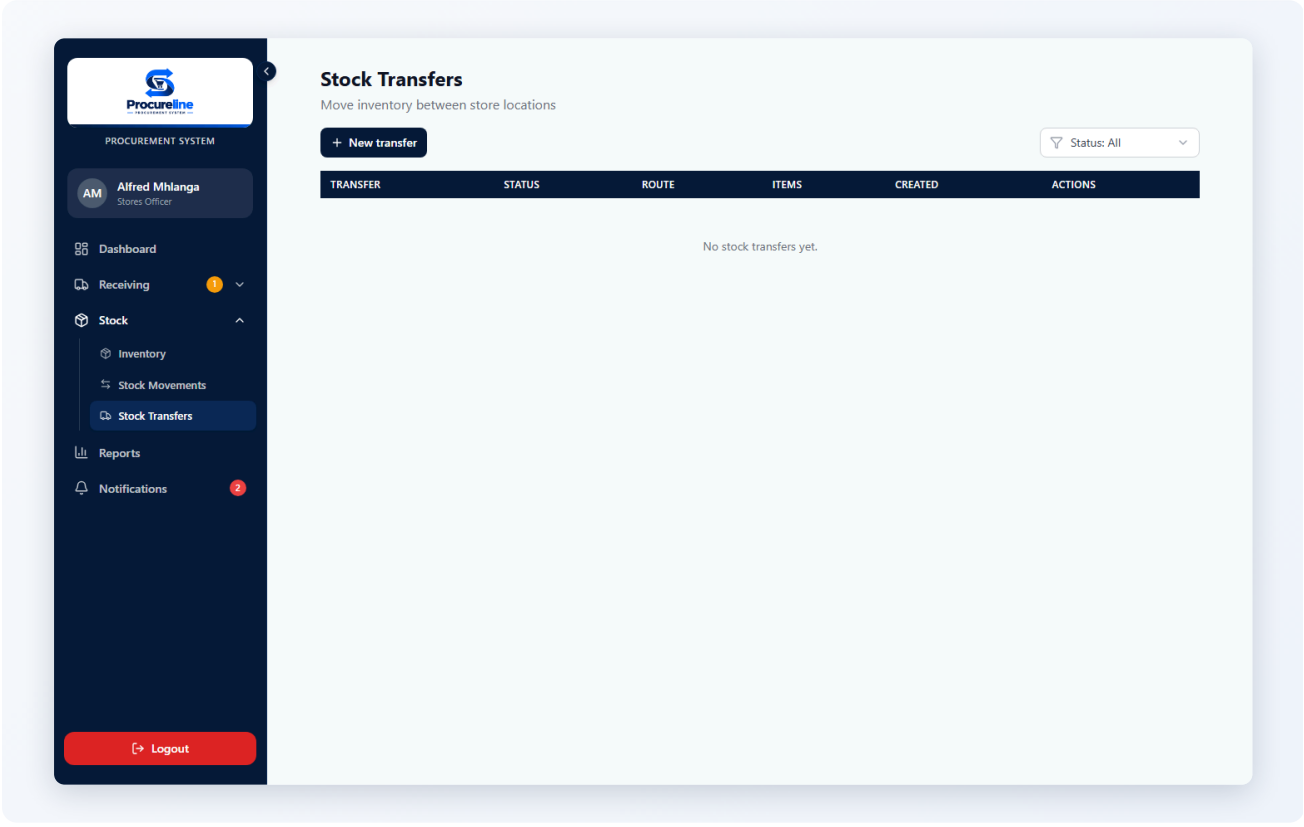

Figure Stock Transfers: moves between sites, each going through Approve, Ship and Receive.

- **Stock › Stock Movements** is the full history: stock in, stock out, adjustments and transfers, filtered by type and date, searchable by item or reference. Use it to reconcile a count.
- **Stock › Stock Transfers** moves stock between sites. Click New transfer, choose **From site** and **To site**, add lines, and Create transfer. The transfer then goes through Approve, Ship and, at the receiving site, Receive. Stock leaves the source on shipping and arrives on receipt, so a transfer in transit is visible at neither site.

4.7 Restock a low shelf

STORES OFFICER

Stores asks for its own shelves to be refilled. A restock is a requisition from your department: your department head approves it, it goes straight to procurement without a stock check, and on delivery it goes into stock with nothing to collect.

1. On **Stock › Inventory**, click **Restock** on a row marked Low Stock or Out of Stock.
2. Check the **Quantity to order**. It is the site's reorder quantity if one is set, otherwise enough to bring stock to twice the reorder level. If the form shows the item **Also in stock elsewhere**, a transfer from that site may be quicker than buying (4.6).
3. The **Category** is filled in from the item's own category. It is blank only for vague ones such as Consumables; pick one then, and the item remembers it. Add a **Note for the approver** if useful, then click **Request restock**.

   Toast **sent to your department head for approval**. The row shows the requisition number instead of the Restock button until the goods arrive, so the same shelf is never ordered twice. Follow it under **Stock › Restock Requests**.

Low-stock alerts. Once an hour Procureline checks every site. Stores officers at a site with items at or below their reorder level get one alert naming the site and the items, by email and in Notifications. An item is alerted once a day; an item that becomes low later in the day brings a new alert. The alert links to the low-stock list.

Your department needs a head. A restock is refused if the stores officer's department has no head or deputy to approve it. The administrator names one under **Organisation › Departments**.

PART 5

Sourcing and orders

Procurement takes a requisition from acceptance to a signed-off order: invite suppliers, collect sealed quotations, pick the winner with a reason, have the award authorised, and raise the order. The system will not let a step be skipped, so the quickest path is the correct one.

5.1 Your dashboard

Open RFQs, Pending Quotations, Active Suppliers and Purchase Orders, plus a **Requisition pipeline** with tiles for Pending Acceptance, Accepted, In Sourcing and Ordered. **Needs attention** lists requisitions awaiting acceptance, quotations awaiting evaluation and open RFQs collecting quotations. The Head of Procurement also sees suppliers awaiting their activation approval. Quick actions: Create New RFQ, Review Quotations, Manage Suppliers, Purchase Orders.

5.2 Accept a requisition

PROCUREMENT OFFICER

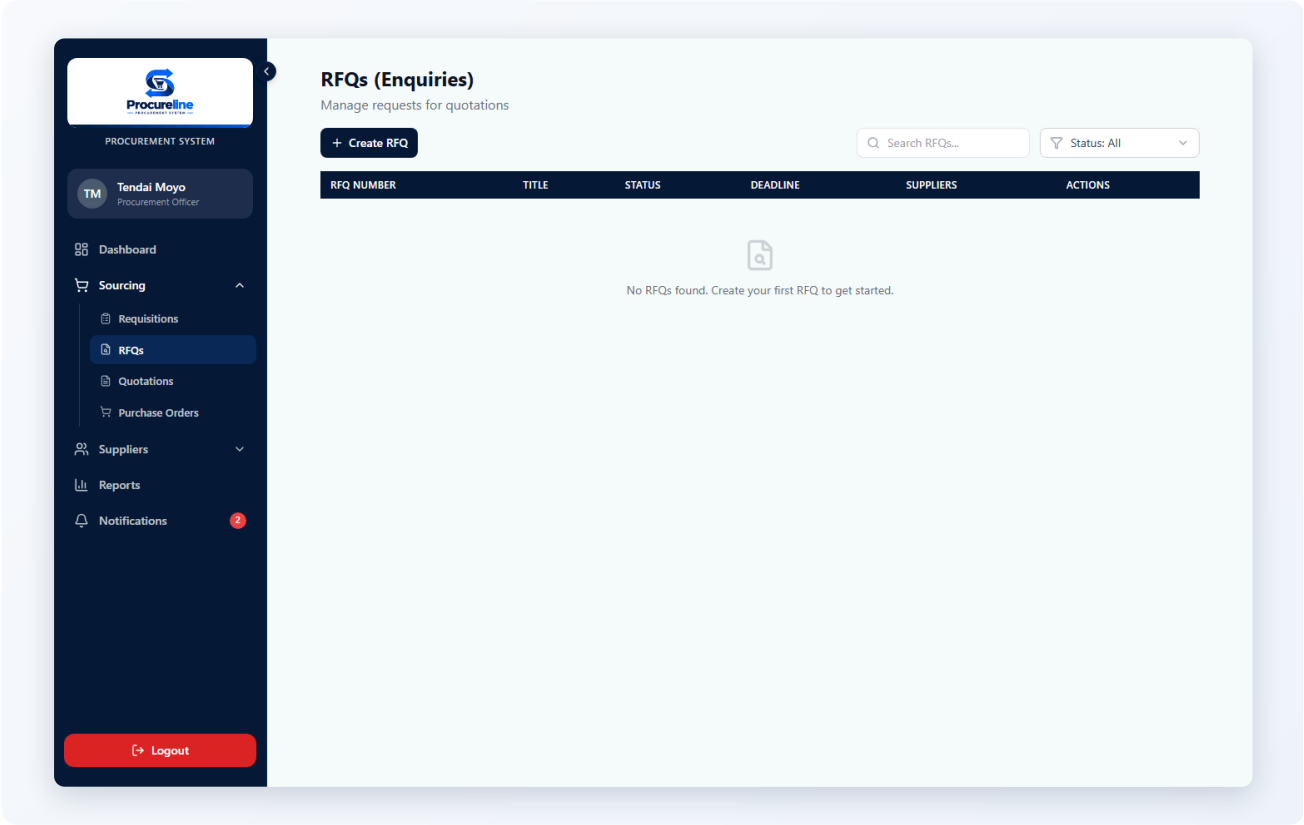

Figure RFQs (Enquiries): every request for quotation with its status, deadline and number of invited suppliers. Create RFQ is above the list.

1. Open **Sourcing › Requisitions** (titled *Purchase Requisitions*). Rows at Pending Acceptance have Accept and Reject.
2. Open it with View if you want to trim it: while it is with you, lines can be edited or removed, with the hint *Remove any item you don't want purchased before approving*.
3. Click Accept and confirm. To refuse it, click Reject with a **Reason for Rejection**; the requester is told.

   Toast **Requisition accepted — now create its RFQ**, and the Create RFQ drawer opens with the requisition's lines already in it. The two-day sourcing clock starts; the RFQ list shows *overdue* after that.

5.3 Create and publish an RFQ

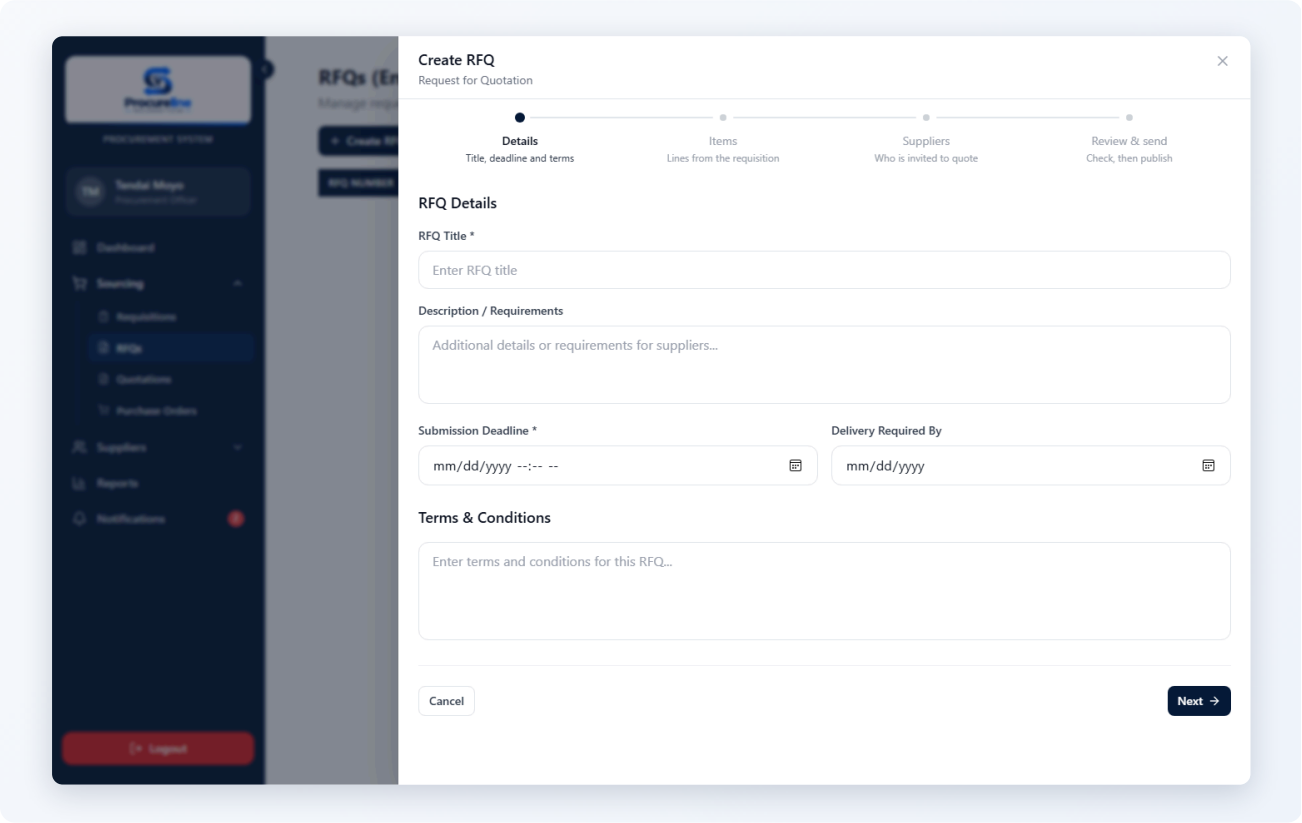

Figure The Create RFQ drawer: Details, Items, Suppliers, Review & send. Title and submission deadline are required.

1. From the accepted requisition click Create RFQ, or open **Sourcing › RFQs** and click Create RFQ. The drawer has four steps.
2. **Details.** **RFQ Title** and **Submission Deadline** are required. Add **Description / Requirements**, **Delivery Required By** and **Terms & Conditions**.
3. **Items.** The lines come locked from the requisition and cannot be changed here. If they are wrong, reject the requisition instead.
4. **Suppliers.** Suppliers in the requisition's categories are pre-selected. Use Add n related to top up from related categories, or search by name. The drawer warns when fewer than three suppliers are invited and when two records look like the same company. Invite at least three; a closed RFQ with fewer than three quotes needs a waiver (5.5).

5 **Review & send.** Check everything; each block has Edit. Click **Publish RFQ**, or Save as Draft.

Toast **RFQ created and sent to suppliers**. Every invited supplier gets a notification and an email headed *New RFQ*, and a reminder in the 48 hours before the deadline. A draft is published later from the RFQ's own page with **Publish RFQ**.

> Until the deadline, bids are sealed: the RFQ page says *Bids are sealed*, the Quotations list shows *Sealed bid* instead of the supplier and amount, and nobody in the organisation can open one. This is deliberate.

5.4 Close the RFQ and compare bids

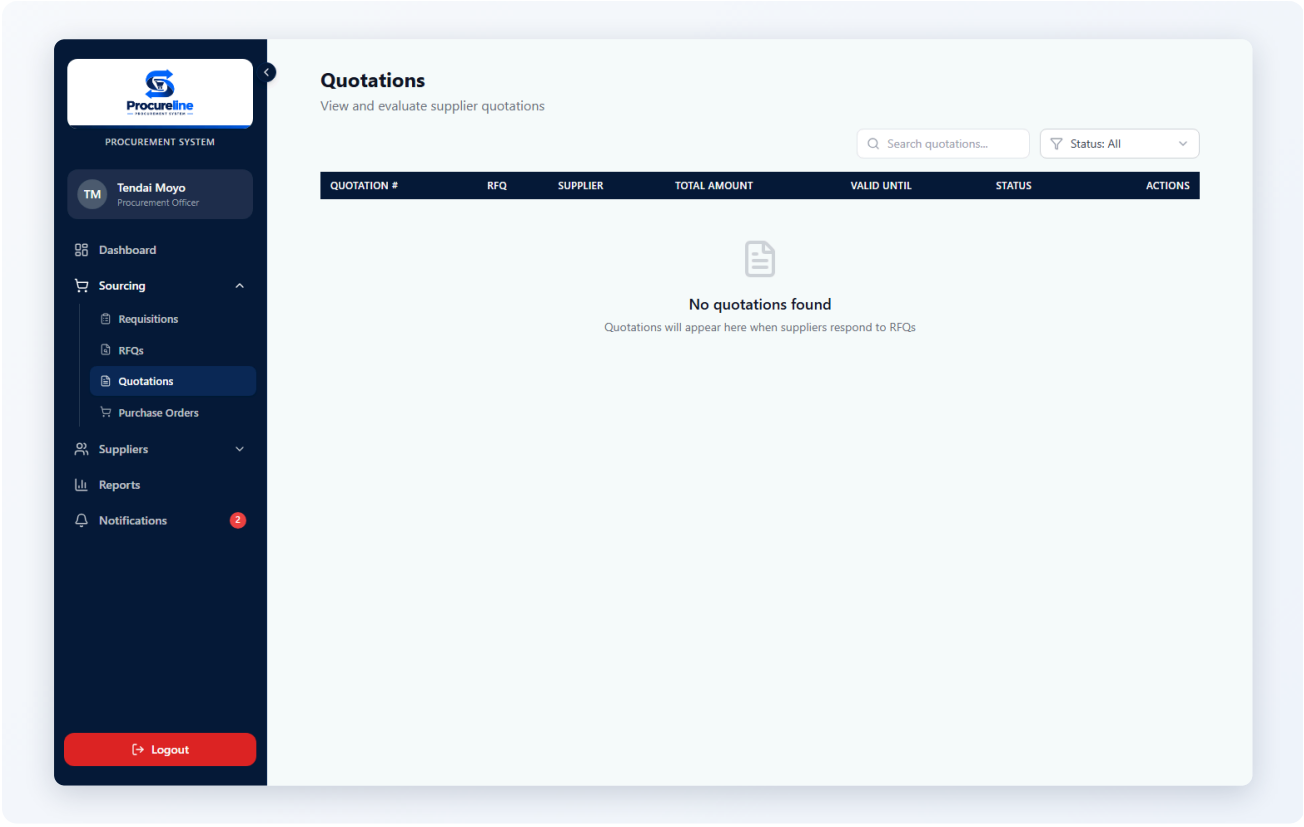

Figure Quotations: one row per supplier response. Until the RFQ closes a row reads Sealed bid.

1 Open the RFQ and click **Close RFQ & Reveal Bids**. Confirm; suppliers can no longer submit.

2 Read the **Response Ranking** panel: each quotation is scored out of 100 (price 50, delivery 20, past performance 20, completeness 10) with tags such as *Lowest price* and *Fastest delivery*, the lowest price and the spread. The ranking is advice, not a decision.

3 Open each quotation with View quotation to read the lines, brands, any *Alternative offered* note, delivery days, payment terms and validity.

Toast **RFQ closed — bids are now visible**. The RFQ shows Closed, and the requisition's RFQ card reads *Under evaluation*.

5.5 Fewer than three quotations

If the RFQ closed with fewer than three quotations, the award is blocked until the COO or the Head of Procurement approves a waiver. The COO and Head of Procurement are notified at closing so it does not sit unnoticed. On the quotation page, the **Acceptance Authorization** panel's first step, *Minimum 3 competitive quotations*, offers the waiver; on the award matrix each short line has `Waiver`. The approver picks a type: Single/sole source, Insufficient quotations received, Existing service agreement, Approved framework / contract, Unique / proprietary product, Custom manufacture / bespoke item, COO directed procurement, COO written instruction, or Other, and clicks **Approve waiver**. A procurement officer cannot approve their own waiver.

5.6 Select the winner

PROCUREMENT OFFICER

There are two ways to award: the whole RFQ to one quotation, or line by line to different suppliers.

Whole quotation

1. Open **Sourcing › Quotations** and `View` the winning quotation.
2. In **Acceptance Authorization**, step *Procurement selection with justification*, write the **Justification for selecting this quotation** and click **Select this quotation**.

   Toast **Quotation selected. Waiting for the Head of Procurement to authorize.** The Head of Procurement sees it under Authorizations (7.1). You cannot authorise your own selection.

Line by line (split award)

1. On the RFQ click `Split Award`. The matrix shows one row per line and one column per supplier, cheapest first, with the spread per line.
2. Click the price you are awarding on each line and type the **Justification** when asked. The line shows Awarded (needs auth).
3. The Head of Procurement authorises each line with `Authorize`. Then click **Generate POs for authorized lines**: one order is created per supplier.
4. Lines nobody quoted, or that you did not award, go back out with `Re-source unquoted / unawarded lines`, which creates a new RFQ and notifies its invitees.

> **The supplier must be ready.** An award is refused if the supplier is not activated (6.5), its KYS is incomplete for its tier, or a required document has expired. Check the supplier's facts strip (*Spend authorisation: Authorised*) before you select.

5.7 Request a price revision

On a quotation that is submitted or under review, `Request Revision` asks the supplier for a better price with a **Reason for revision** and optional target. The quotation shows Revision Requested; the supplier's new quote supersedes the old one. Use this before selection, not after.

5.8 Accept and raise the order

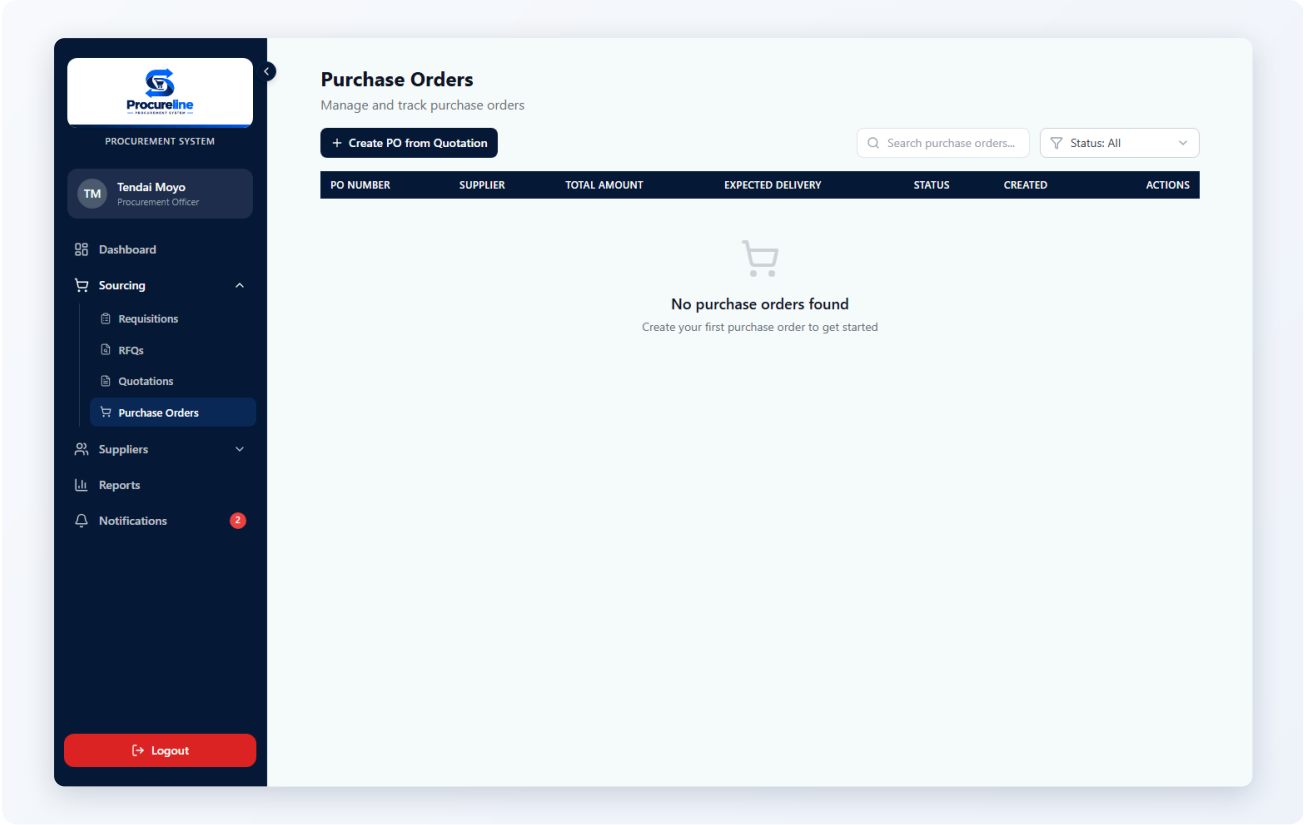

Figure Purchase Orders: each order with supplier, amount, expected delivery and approval status; Create PO from Quotation is above the list.

1. Once the panel says *Fully authorized — you can now accept this quotation*, click **Accept** and confirm. The other suppliers are told their quotation was not selected.
2. Click **Create Purchase Order** on the quotation, or **Create PO from Quotation** on **Sourcing › Purchase Orders**. The drawer has four steps: **Quotation** (pick the accepted quotation), **Delivery** (address and **Expected Delivery Date**), **Terms** and **Review**. Click **Create Purchase Order**.
3. Open the order and click **Submit for Approval**.

   Toast **Purchase order submitted to the Head of Procurement for approval**. The order shows **Pending Head of Procurement**. One quotation can have only one order.

5.9 Approval, issue and delivery

ORDER STATUS	WHAT IS HAPPENING
Pending Head of Procurement	First approval (7.2)
Pending Finance	Second approval (8.1)
Pending COO	Only when the order is at or above the organisation's COO limit in US dollars. An order in another currency is converted at the stored rate; if there is no rate on file, the order goes to the COO regardless

ORDER STATUS	WHAT IS HAPPENING
Approved	The last approver's click emails the order PDF to the supplier and notifies them. Nothing more for you to do
Issued	The supplier has acknowledged the order; a pending delivery is created for Stores
Partially Received, Completed	Stores has received some or all of the goods on a GRV
Rejected	An approver rejected it, with a reason on the order. Fix and resubmit, or cancel

To cancel, open the order and click `Cancel PO` with a reason from the list (supplier unable to deliver, price or terms changed, goods no longer required, duplicate, linked requisition cancelled, supplier default, other). Cancellation is blocked once goods have been received or an invoice is active. The supplier is notified.

5.10 Evaluate the supplier

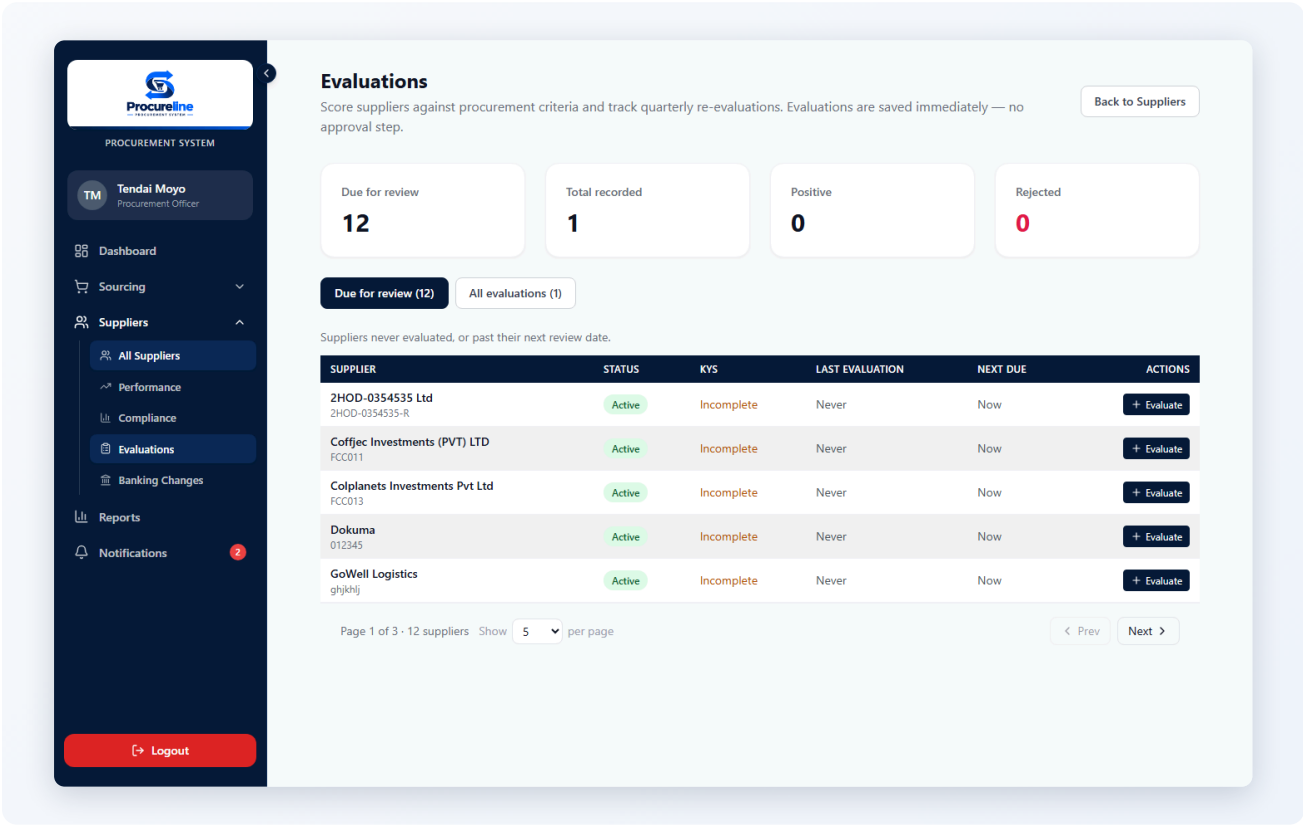

Figure Evaluations: the Due for review tab lists suppliers never evaluated or past their review date, each with an Evaluate button.

After delivery, score the supplier under **Suppliers › Evaluations**. The **Due for review** tab lists suppliers that are overdue or never evaluated. Click `Evaluate`: score the seven criteria from 1 to 5 (credit terms, contracts in place, market reputation, pricing, delivery, ease of dealing, consistent quality), choose the **Evaluation type** and a **Recommendation** (Approve, Conditional approval, Re-evaluate later, Reject), add notes and

Save evaluation. The score feeds the *past performance* part of future rankings and the Performance view. Re-evaluation falls due every 3, 6, 12 or 24 months by tier.

PART 6

Supplier management

A supplier can be asked for a price while its checks are in progress, because a quote commits nothing. It cannot win an award or receive an order until its Know Your Supplier (KYS) checks are complete, a second person has approved its activation, and it is marked spend-authorised.

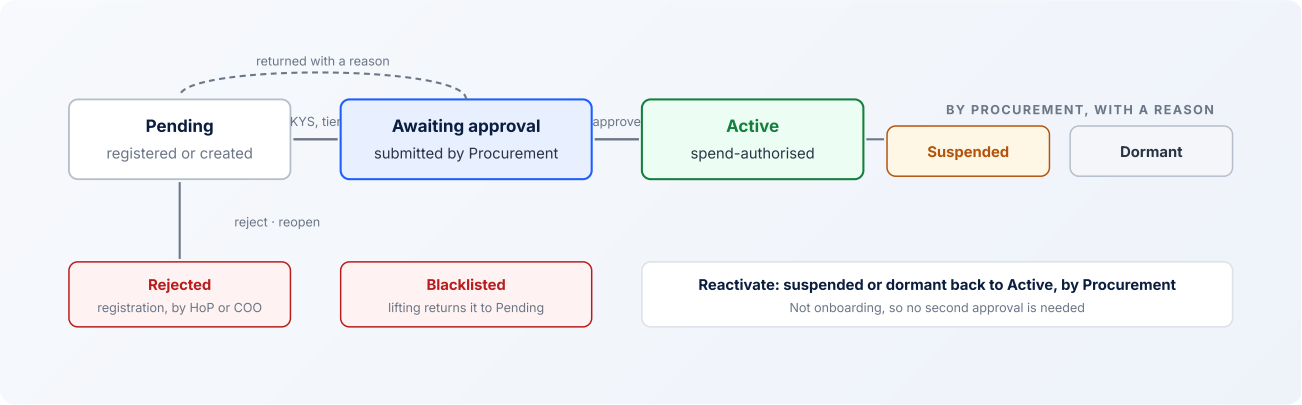

Figure Supplier statuses. Activation takes two people: Procurement submits, the Head of Procurement or the COO approves. Every change is logged with who made it and why.

6.1 Add a supplier

PROCUREMENT OFFICER

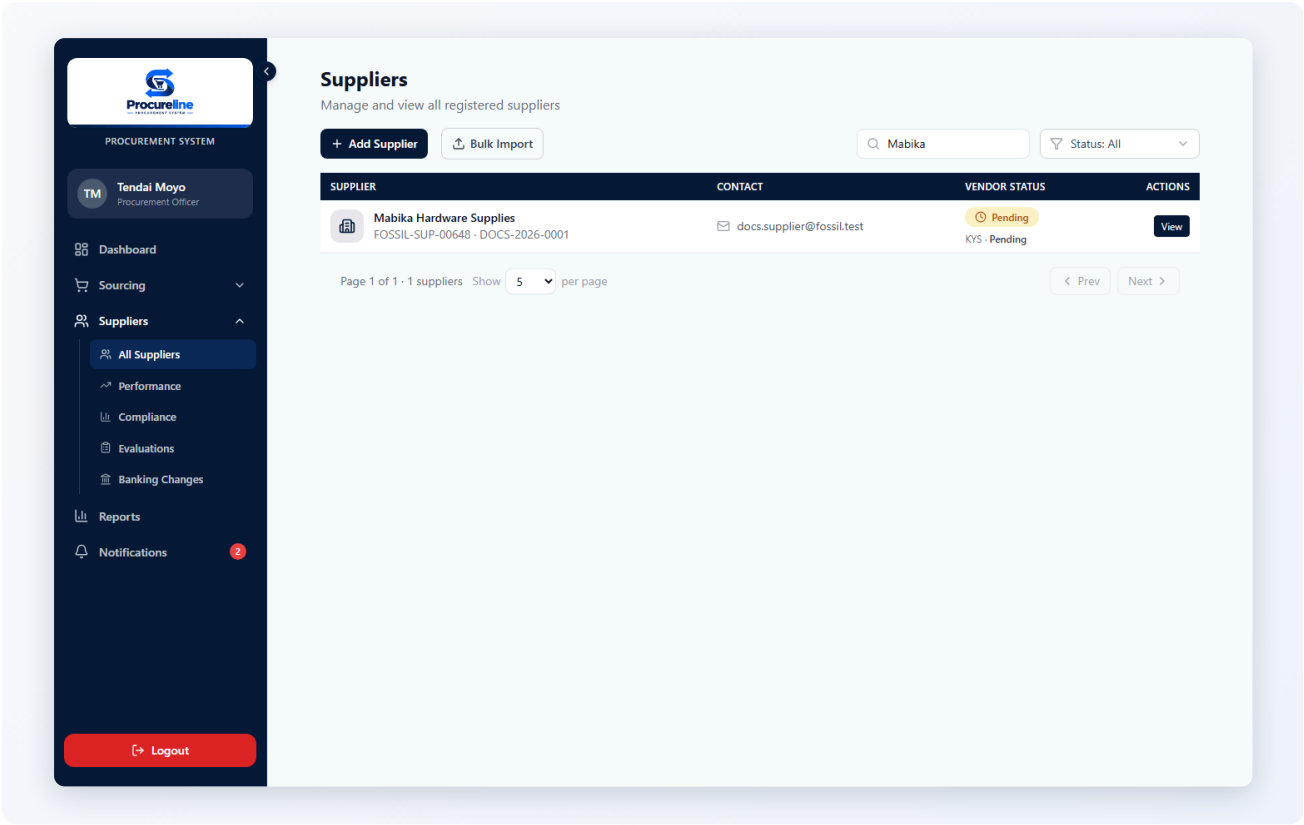

Figure Suppliers: search by name, code or registration number, filter by status, Add Supplier and Bulk Import. The code sits under each name.

Suppliers can register themselves (Part 10), or you can create them. Either way they start as Pending.

1. Open **Suppliers › All Suppliers** and click **Add Supplier**. Four steps: **Company & login**, **Business**, **Banking**, **Review**.
2. **Company & login.** Company Name, Registration Number, contact First Name and Last Name, and Email are required. Leave **Password** blank to have one generated.
3. **Business.** Optional: trading name, phone, tax and VAT numbers, **Business Type** (manufacturer, distributor, wholesaler, retailer, service provider, contractor, other), **Entity Type** (company, individual), address, and **Categories of Supply**. Categories are what match a supplier to RFQs, so set them.
4. **Banking.** Optional first bank account. Later changes go through bank-change approval (6.7).
5. **Review** and click **Create Supplier**.

   Toast **Supplier created — complete KYS to activate them**. If a password was generated, the **Supplier created** box shows it once; it is also emailed to the supplier, who should change it at first sign-in. **Continue to KYS** opens the profile on the Documents tab. The supplier gets a permanent code such as `ORG-SUP-00042` (your organisation's code, then a running number), shown under its name.

> A company can be registered once. The registration number is compared ignoring case, spaces and hyphens, so a second record for the same company is refused.

6.2 Bulk import

Bulk Import on the supplier list takes an Excel, CSV or JSON file, or pasted CSV with a header row. Required columns: `companyName`, `registrationNumber`, `contactPerson`, `email`, `phone`; `categories` is optional. The preview highlights cells missing a required value; those rows are rejected and the rest imported. Imported suppliers start as pending and still need KYS and activation. Use this for the supplier register at launch.

6.3 KYS documents and checklist

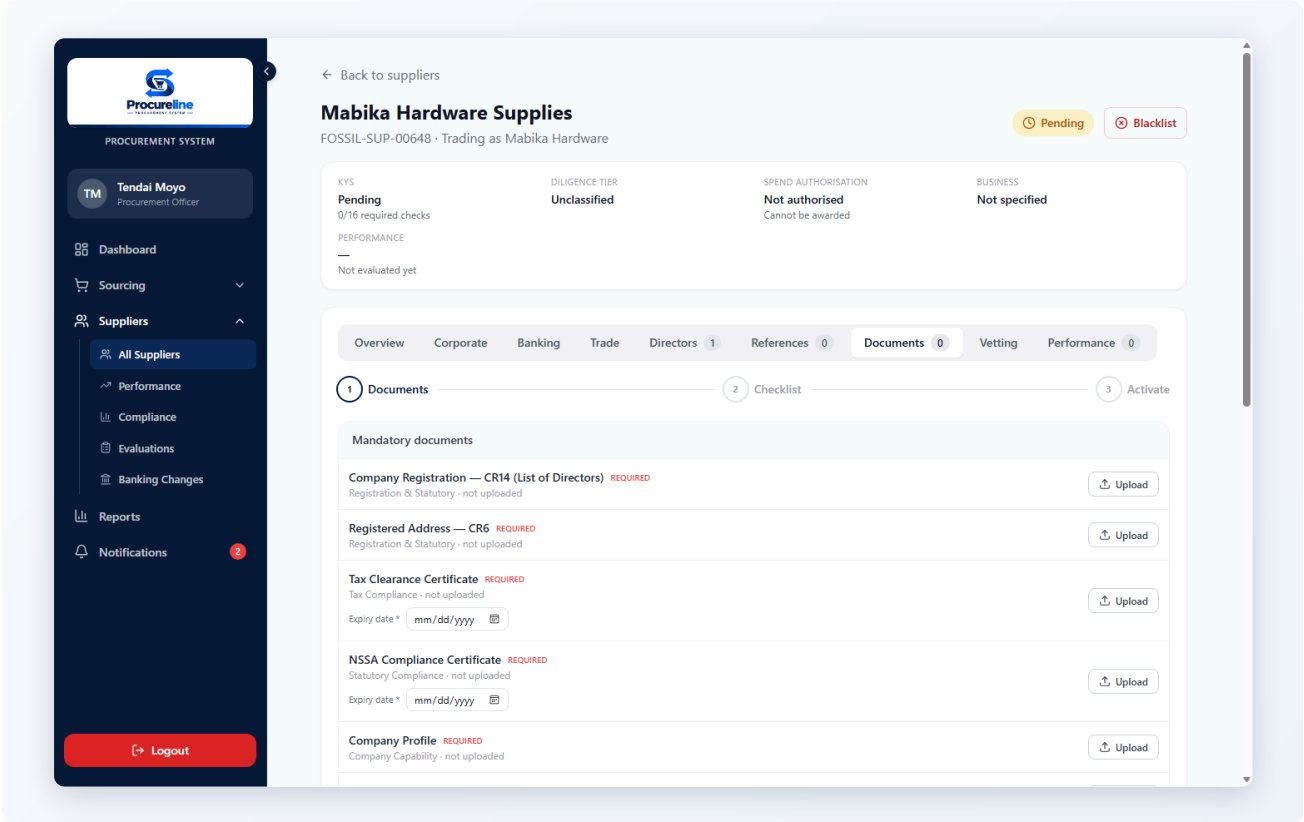

Figure A pending supplier on its Documents tab: the facts strip shows KYS progress, tier and spend authorisation; the wizard runs Documents, Checklist, Activate.

Open the supplier and the **Documents** tab. It is a three-step wizard: **Documents**, **Checklist**, **Activate**.

1. **Documents.** The list is split into **Mandatory documents** for the supplier's tier and **Optional documents**. Suppliers upload their own (10.2); you can also **Upload** or **Replace** for them. Each file is PDF, image, Word or Excel, up to 5 MB. Tax clearance, NSSA, insurance, ISO, industry licences and NEC need an **Expiry date**.
2. **Check each file.** Open it with **View**, then **Verify** it, or **Reject** it with a reason the supplier sees. A rejected or expired file shows why.

3. **Checklist.** Tick each item as satisfied; the tick saves at once. The counter shows required items done against the tier's requirement. Items are grouped: registration and statutory (CR14, CR6), tax clearance, NSSA and NEC, licences and ISO, company capability (profile, three client referrals), financial standing (audited statements, bank references, payment terms, liquidity), commercial and operations, and health, safety and environment (safety records, environmental policy, insurance, disaster plan).

> **Expiry matters on its own.** A required document that has passed its expiry date blocks awards and orders to that supplier, whether or not anyone has noticed. Reminders go to the supplier and to Procurement 60, 30 and 7 days before.

6.4 Set the diligence tier

On the **Activate** step, the **Diligence tier** panel sets how deep the check must be. An unclassified supplier is treated as full depth, so low risk is never assumed. Click the tier and give the reason when asked. The panel suggests a tier from what it knows.

TIER	MEANING	KYS REQUIRED	RE-EVALUATE
Critical	Sole source, or the business stops if they fail	All 16 required items	3 months
Strategic	High spend or long-term partner	All 16 required items	6 months
Tactical	Routine, bought competitively	CR14, CR6, tax clearance, NSSA, insurance	12 months
Transactional	Low value, low risk, easily replaced	CR14, tax clearance	24 months
Unclassified	Not yet assessed	All 16 required items	3 months

6.5 Submit for activation

PROCUREMENT OFFICER OR HEAD OF PROCUREMENT

1. On the **Activate** step, click **Submit for activation**. The box reminds you that the Head of Procurement or the COO, not you, approves it, and that the supplier stays pending until then.
2. If KYS is short of the tier's requirement, the box lists what is missing and a **Reason for the KYS override** is required; the approver sees it and, by approving, takes the override in their own name. Otherwise add **Notes for the approver** if useful.
3. Click **Submit**.

   Toast **Submitted for activation**. The supplier shows **Awaiting approval** with a banner naming you and the date. Every Head of Procurement and COO other than you is notified. If it comes back *returned*, the banner shows the reason; close the gap and submit again.

The supplier list filter **Awaiting approval** shows every open request; approvers also have **Awaiting my approval**. The approver's steps are in 7.4.

6.6 Suspend, blacklist, reactivate

The buttons sit beside the status badge on the supplier's page. Each asks for a reason and confirmation, and each is written to the audit log and the supplier's status history.

BUTTON	WHEN SHOWN	EFFECT
Suspend	Active	No new invitations, awards or orders until reactivated
Mark dormant	Active	Stays on the register but set aside until reactivated
Reactivate	Suspended or dormant	Back to active. Not onboarding, so no second approval
Blacklist	Any status	Cannot be invited, quote, be awarded or register again; the reason is shown on the record
Lift blacklisting	Blacklisted	Back to pending. It must be submitted for activation and approved by someone else before it can win work

Rejecting or reopening a registration is for the Head of Procurement or the COO (7.5). Rejection says nothing against the company, unlike blacklisting.

6.7 Bank-detail changes

PROCUREMENT OFFICER, TWO DIFFERENT PEOPLE

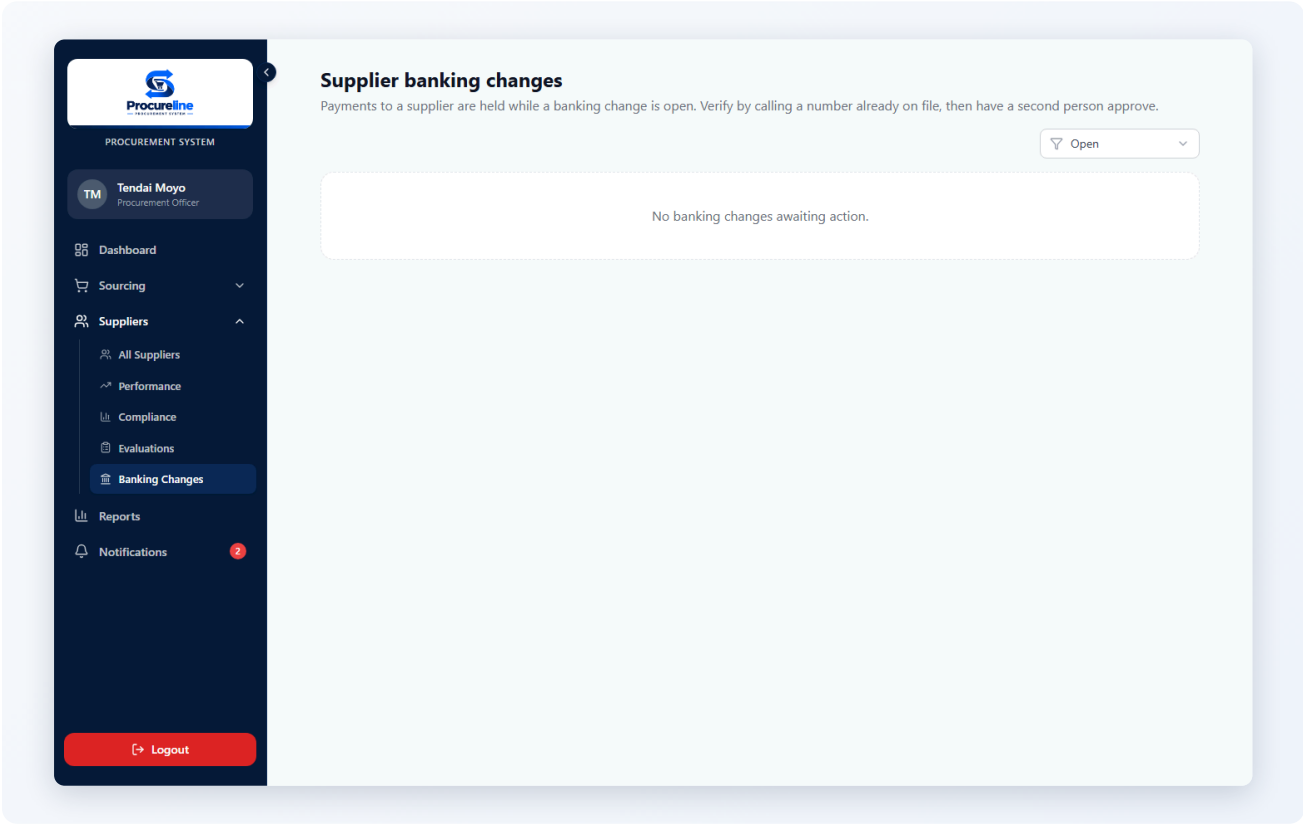

Figure Supplier banking changes: open requests with the old and new details side by side, Record callback, then Approve by a second person.

A change to where a supplier is paid is the classic fraud, so it is handled on **Suppliers › Banking Changes** with a call-back and a second person. Payments to the supplier are held while a change is open.

1. The supplier changes its bank details on its Company Profile (or you edit the Banking tab for them). The change is held as a request, shown as `pending verification` with the old and new values side by side.
2. **Call back.** Telephone the supplier on a number that was *already on file before the request*. The numbers on file are frozen while the request is open, so a number supplied with the change can never be the one called. Then click **Record callback**, enter the number you called and who confirmed the change. Calling a number not on file needs an override reason and is logged.
3. **Approve.** A different person, who is neither the requester nor the caller, clicks **Approve**. Or **Reject** with a reason.

   Toast **Banking change approved and applied. Payments have resumed.** The supplier is told either way and sees the outcome on its profile.

6.8 Vetting record

On the supplier's **Vetting** tab, record how the supplier joined the register (**Onboarding method**: newspaper invitation, direct application, referral, existing supplier, other) and the **Site visit**: status, date, who conducted it and notes. Click **Save vetting record**. The **Directors** and **References** tabs hold contacts and at least three trade references, which the KYS checklist expects.

6.9 Compliance and performance views

- **Suppliers › Compliance**: KYS verified and pending counts, coverage, suppliers pending activation, and a **Compliance watchlist** with incomplete KYS first. Start here each week.
- **Suppliers › Performance**: scores from evaluations, bands from Excellent to Low, top suppliers, and who is **Due for evaluation**.
- **Suppliers › Evaluations**: record and browse evaluations (5.10).
- **Reports**, **Suppliers** tab: the registry with status, KYS, score, orders and spend per supplier, exportable to CSV.

PART 7

Sign-offs

The Head of Procurement and the COO are the second pair of eyes on the decisions that commit money or admit a supplier. Each decision is one click with a reason where it is a refusal, and each lands in a queue with a count on the menu.

Where to look. The Head of Procurement has **Sign-offs › Authorizations** (awards) and **Sign-offs › Approvals** (orders), plus every Procurement screen. The COO has **Approvals** (orders at or above the limit) and the Suppliers section. Both see **Suppliers awaiting your activation approval** on the dashboard.

7.1 Authorise an award

HEAD OF PROCUREMENT

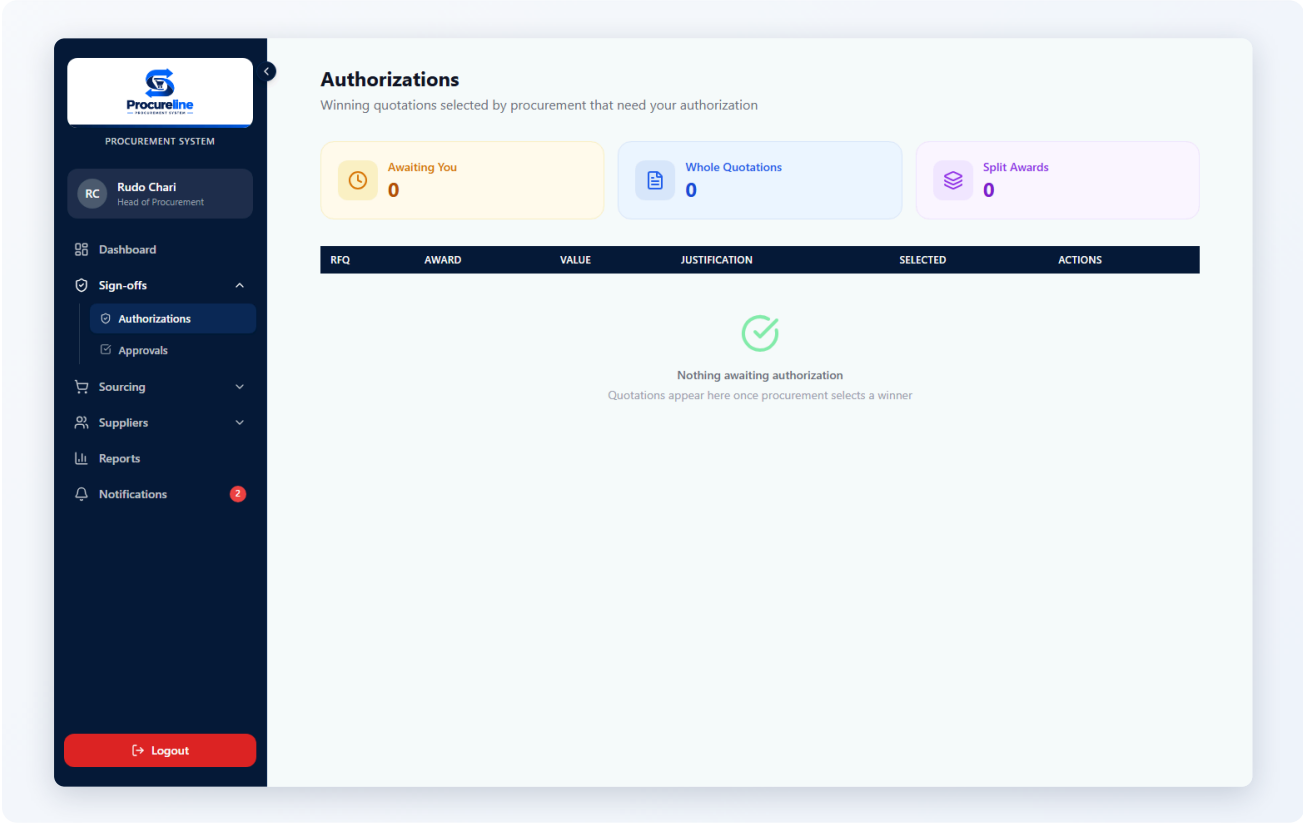

Figure Authorizations: quotations selected by Procurement that need the Head of Procurement's authorisation.

1. Open **Sign-offs › Authorizations**. Each row is a quotation a procurement officer has selected, with the RFQ, the value, the justification and who selected it. A row you selected yourself says *You selected this* and can only be viewed.
2. Click **Review**. Read the quotation, the ranking on the RFQ, and the justification.

3 In **Acceptance Authorization**, click **Authorize as Head of Procurement**. For a split award, open the RFQ's award matrix and click **Authorize** on each line.

Toast **Quotation authorized. Ready for acceptance.** The procurement officer can now accept it and raise the order. Authorisation is refused if the supplier is not activated, its KYS is incomplete for its tier, or a required document has expired; fix the supplier first (Part 6).

7.2 Approve a purchase order

HEAD OF PROCUREMENT, THEN FINANCE, THEN COO AT OR ABOVE THE LIMIT

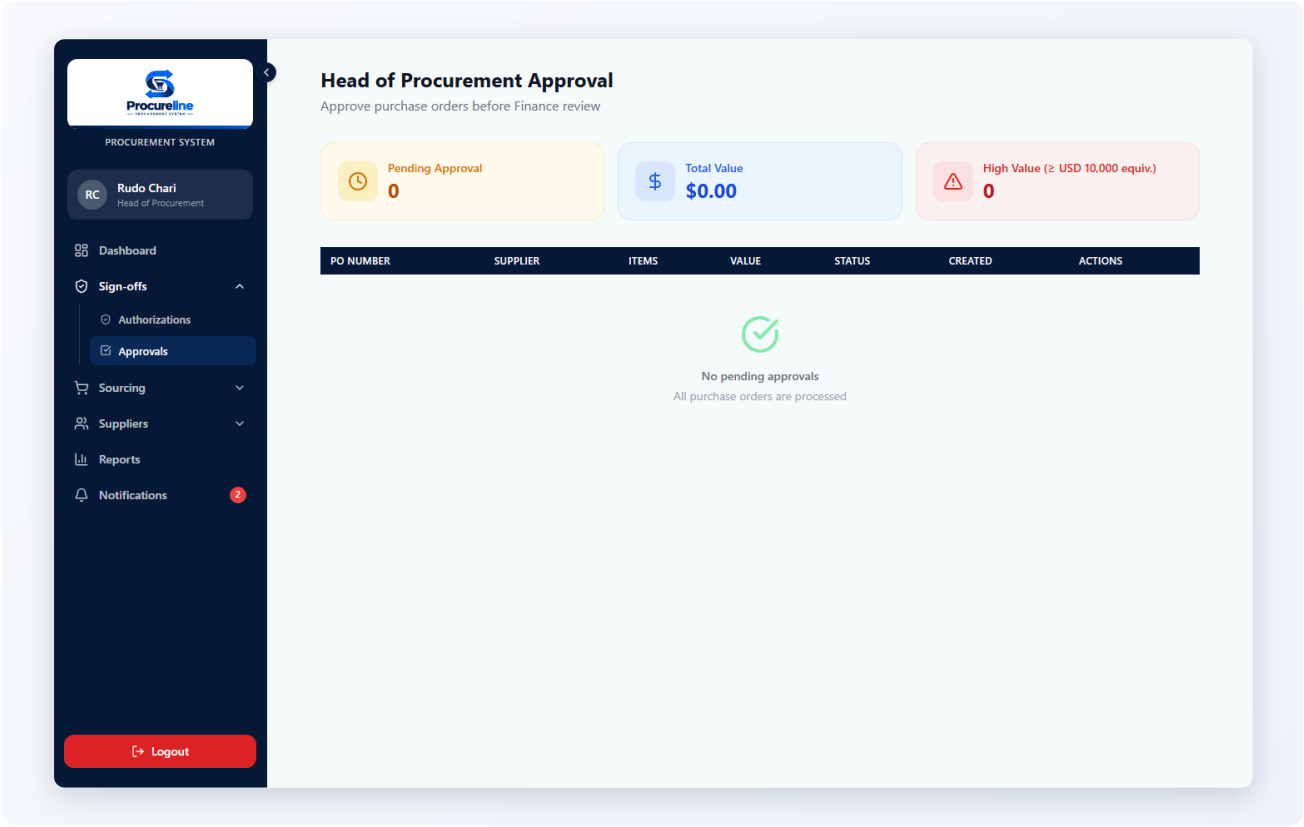

Figure Head of Procurement Approval: the first stage of every order, with Review on each row.

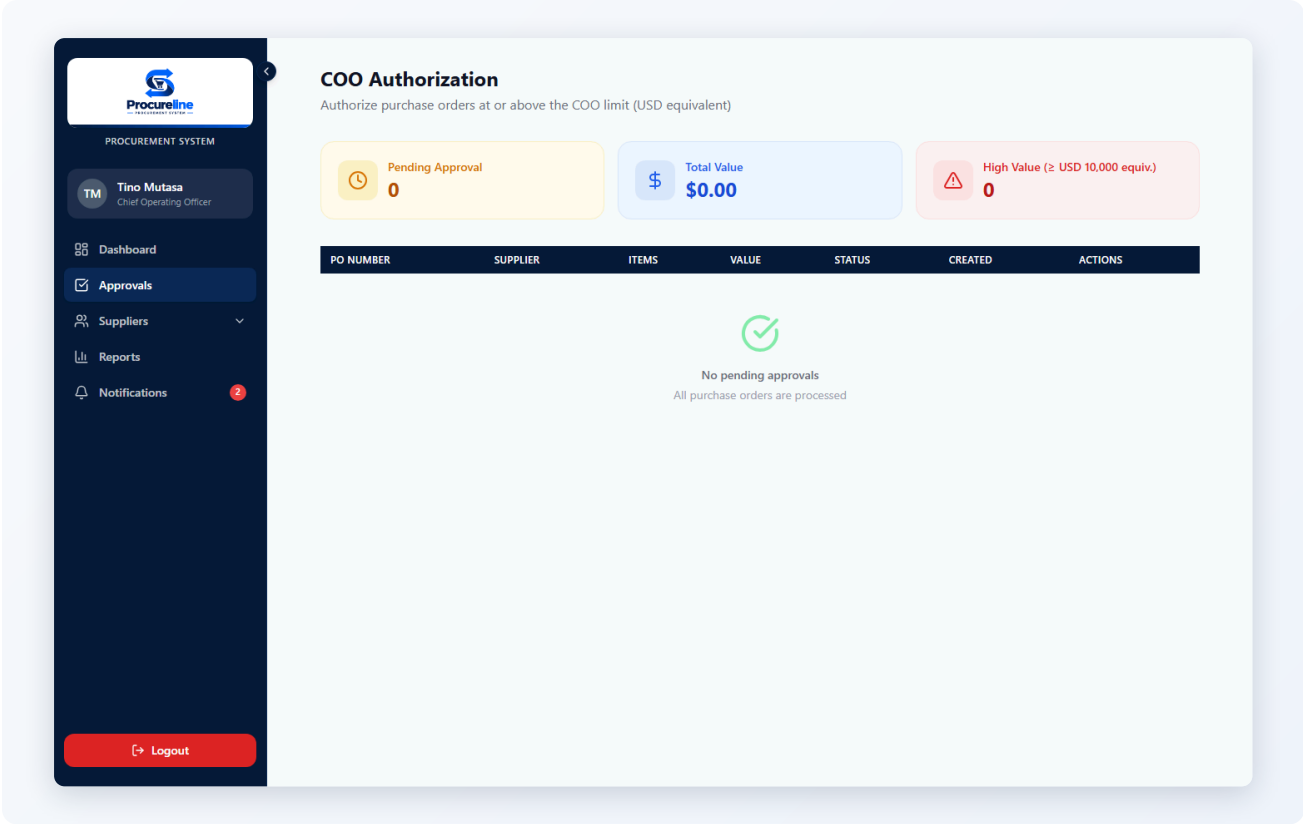

Figure COO Authorization: only orders at or above the organisation's limit reach this queue.

1. Open **Approvals**. The title says whose stage it is: *Head of Procurement Approval*, *Finance Approval* or *COO Authorization*. Tiles show the pending count, total value and orders of USD 10,000 or more. Rows waiting longer than 45 minutes show an age chip against the one-hour target.
2. Click **Review**. The box shows the supplier, total, payment terms, expected delivery, the lines with VAT, a *High Value Purchase Order* warning where relevant, and for the COO the approval history so far.
3. Click **Approve**, or **Reject** with **Comments**, which are required for a rejection.

   Toast **Purchase Order approved successfully**. The order moves to the next stage, or if yours was the last, the order PDF is emailed to the supplier at once. A rejection returns the order to Procurement with your reason.

STAGE	APPROVER	REQUIRED WHEN
1	Head of Procurement	Always
2	Finance manager	Always
3	COO	Order total at or above the organisation's COO limit in US dollars (default USD 5,000). Other currencies are converted at the stored rate; with no rate on file, the order goes to the COO so an unknown conversion can never skip the top approval

Orders can also be approved from the order itself under **Purchase Orders**, where the approver whose turn it is sees **Approve** and **Reject**.

7.3 Approve a quotation waiver

HEAD OF PROCUREMENT OR COO

When an RFQ closed with fewer than three quotations you are notified. Open the quotation (or the award matrix line) and, in the step *Minimum 3 competitive quotations*, choose the waiver type and click **Approve waiver**. The types are listed in 5.5. Approve only where the reason is true on the file: a sole source, a framework contract, no responses received, a unique product, or a written COO instruction. The waiver and its type are logged against the award.

7.4 Decide a supplier activation

HEAD OF PROCUREMENT OR COO, NEVER THE SUBMITTER

1. Open **Suppliers › All Suppliers** and set the status filter to **Awaiting my approval**, or click **Suppliers awaiting your activation approval** on the dashboard.
2. Click **View**. The banner reads *Awaiting activation approval — submitted by … on …*, with any **KYS override requested** reason and the submitter's notes. The facts strip shows KYS progress, the tier and the business type.
3. **Check the file.** Open the **Documents** tab and look at the verified documents and the checklist for the tier; look at Directors, References and Vetting. If anything is missing and no override reason justifies it, return the request.
4. Choose one:
   - **Approve activation**: the supplier becomes active and spend-authorised. If an override was requested, the confirmation says *Approving grants the KYS override in your name*.
   - **Return**: give the reason. The request goes back to the submitter, the supplier stays pending, and it can be submitted again.
   - **Reject registration**: give the reason, which the supplier is shown. The supplier cannot be invited, quote or be awarded, but can still sign in.

   The badge changes to **Active**, **Pending** or **Rejected**, the supplier is emailed, and the decision is in the audit log and the supplier's status history with your name and reason.

> **You cannot approve what you submitted.** If you put the supplier forward yourself, the page says so and the buttons are not shown; another Head of Procurement or the COO must decide. If the checklist changed while the request waited and is no longer complete, approval is refused until the request is returned and resubmitted.

7.5 Reject or reopen a registration

A pending supplier that should not be on the register at all, for example a self-registration from a company you will never use, can be refused before it is ever submitted: open it and click **Reject registration** with a reason. A rejected supplier shows the banner *Registration rejected by … on …* and can be brought back with **Reopen registration** and a reason; it returns to pending and activation again takes two people. Rejection is not blacklisting: it says nothing against the company and a later registration under the same number is refused only because the record already exists.

PART 8

Finance

Finance approves every order, pays only what was ordered and received, and keeps department spending against budget. The three-way match is done by the system; Finance decides what to do when it fails.

Your dashboard. Pending Approval, Approved POs, Total PO Value and All Purchase Orders, with **Purchase orders awaiting finance approval** under Needs attention. Quick actions: Pending Approvals, Invoices, All Purchase Orders, View Reports.

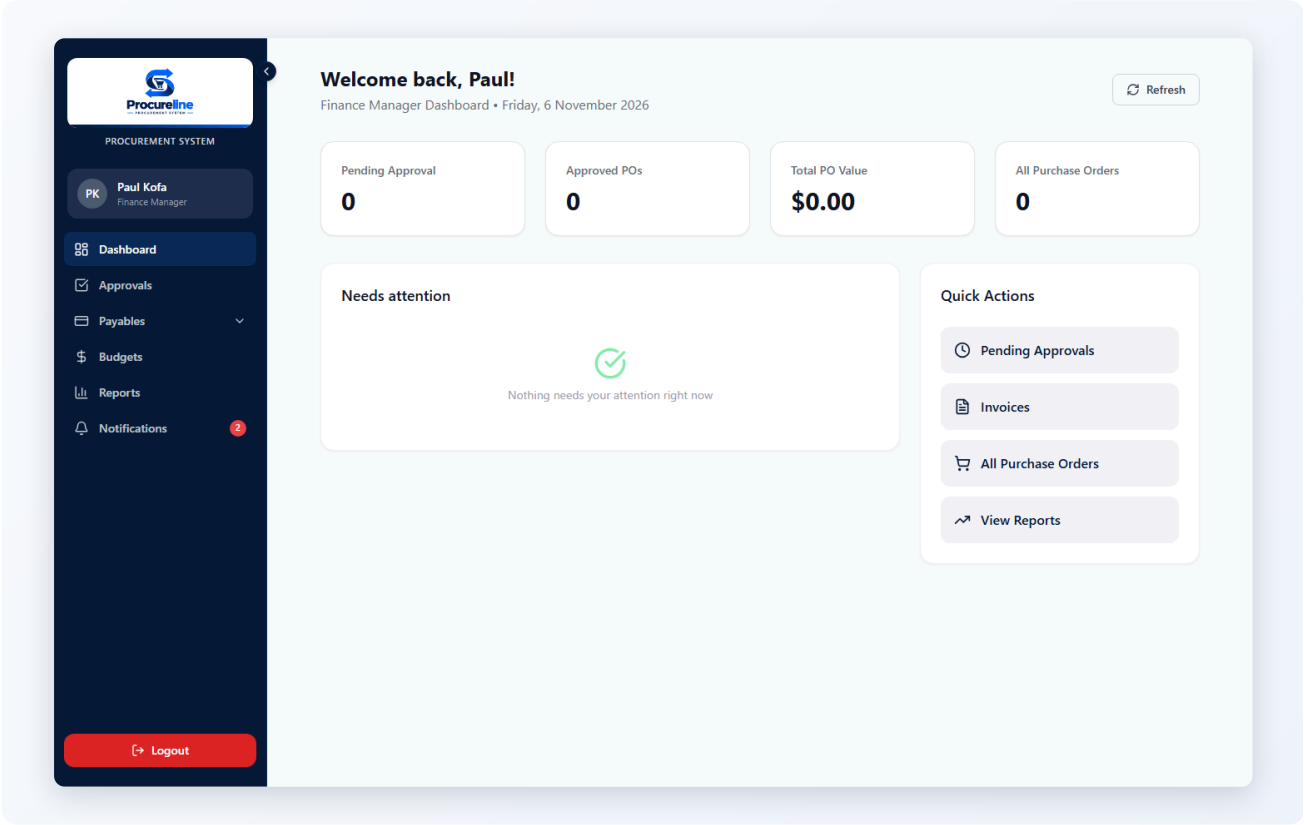

Figure The Finance dashboard: orders pending approval and their value, with quick actions to approvals, invoices and reports.

8.1 Approve purchase orders

FINANCE MANAGER

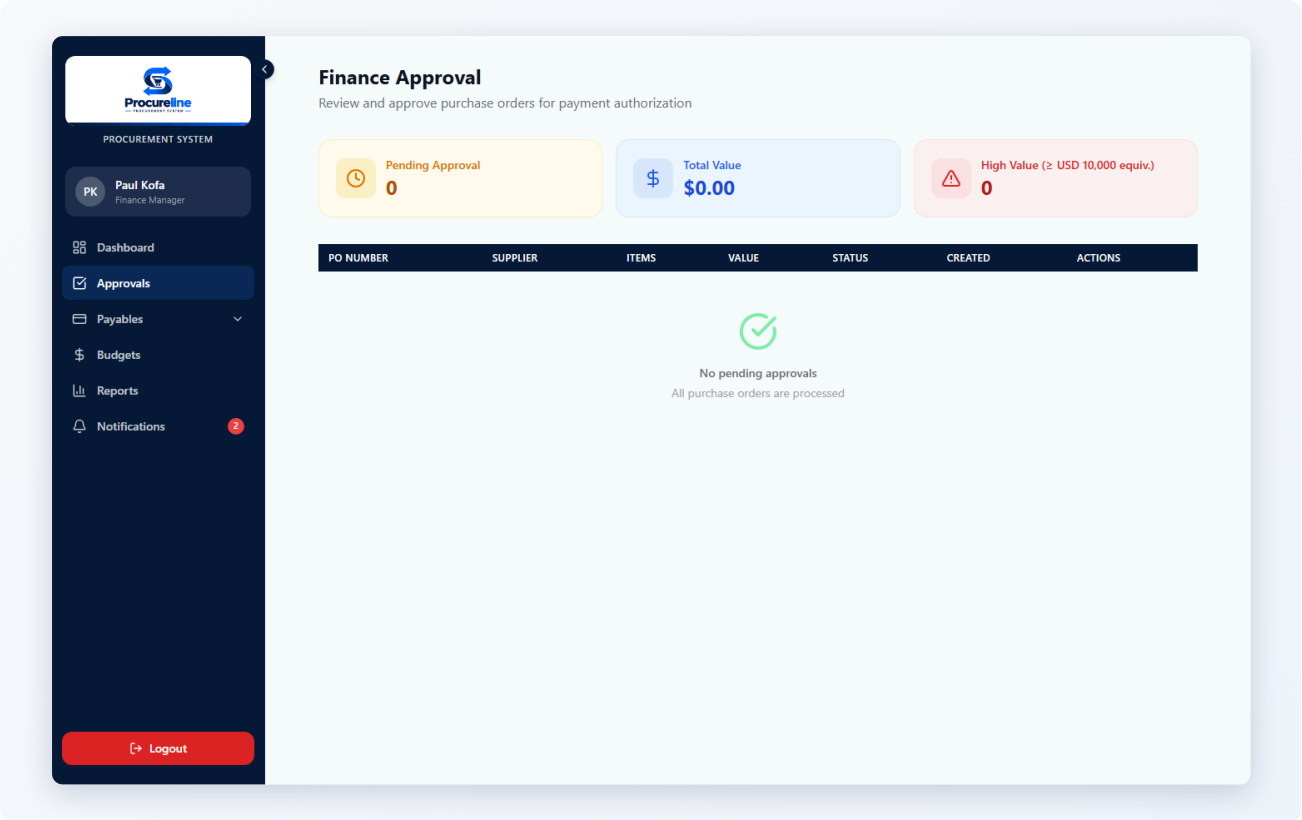

Figure Finance Approval: orders that have passed the Head of Procurement, waiting for Finance.

Finance is the second approval on every order, after the Head of Procurement. Open **Approvals** (titled *Finance Approval*), click **Review**, check the supplier, value, terms and lines, and click **Approve** or **Reject** with comments. The steps are the same as 7.2. Below the COO limit yours is the last approval, and the order is emailed to the supplier when you click. At or above the limit it goes on to the COO.

Check two things every time: that the order's department has budget for it (Budgets shows the committed amount), and that the supplier is one you expect to pay. The supplier's bank details are frozen while a bank change is open, so an order to a supplier with a change in progress will not be paid until that change is decided.

8.2 Match and approve an invoice

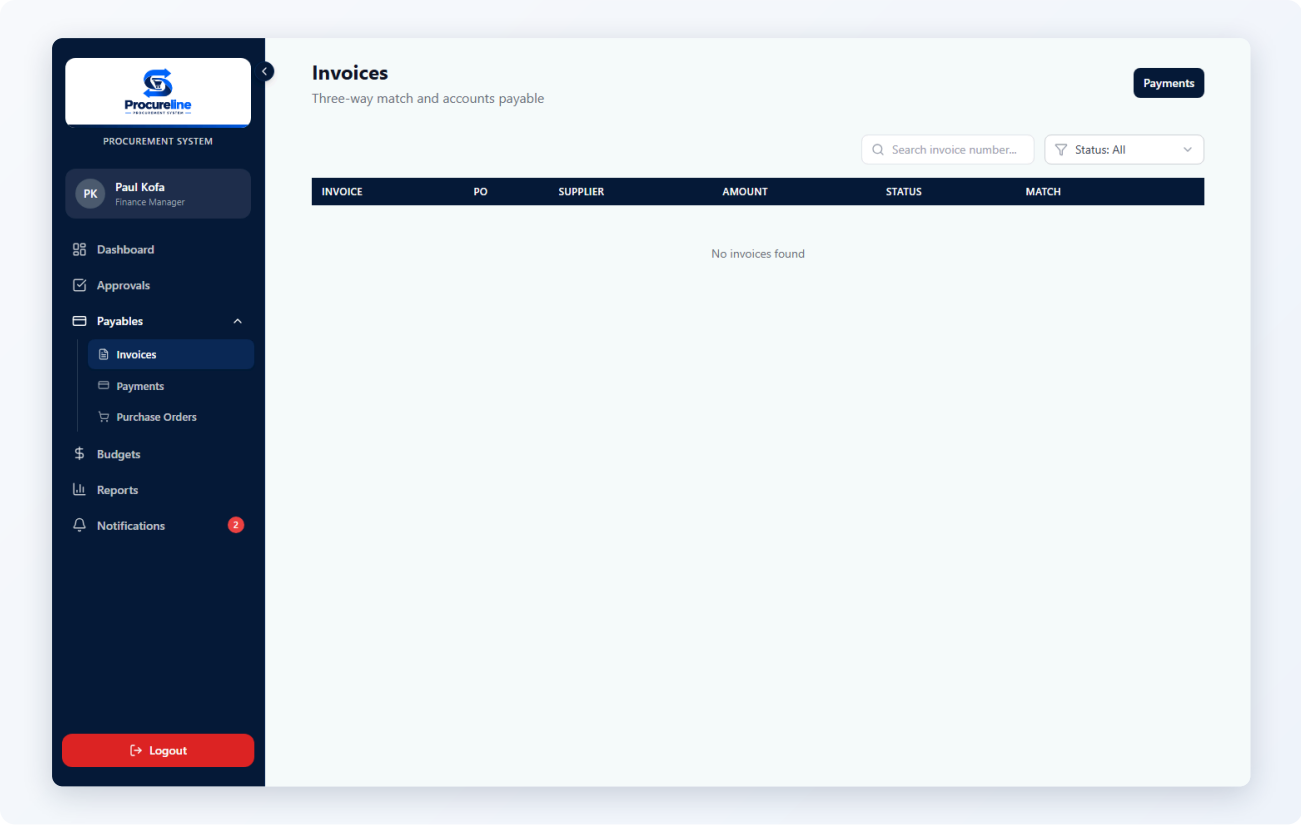

Figure Invoices: supplier invoices with their status and a match icon; View opens the three-way match.

Suppliers submit invoices against issued orders through their portal (10.7); Finance does not key them. Each invoice arrives under **Payables › Invoices** with a match icon.

1. Open the invoice with View. The **Three-way match** panel shows the order total, the value of goods received on GRVs, the amount already invoiced on this order, and this invoice. Below are the GRVs (or *None — stores has not receipted these goods*) and the line items.
2. **If it matches** (within 2% or one unit of currency of what was received and not yet invoiced), click Approve.
3. **If there is a variance**, the invoice shows Variance. Either Reject it with a **Rejection reason** so the supplier submits a corrected invoice, or, where the difference is explained and acceptable, write the **Reason for approving despite the variance** and click Approve with variance. The reason is logged against the invoice.

   Toast **Invoice approved for payment**; the status is Approved and the supplier is told. An invoice with no GRV cannot be approved at all: ask Stores to receive the goods first. The approved invoices on an order can never exceed the value received.

8.3 Record a payment

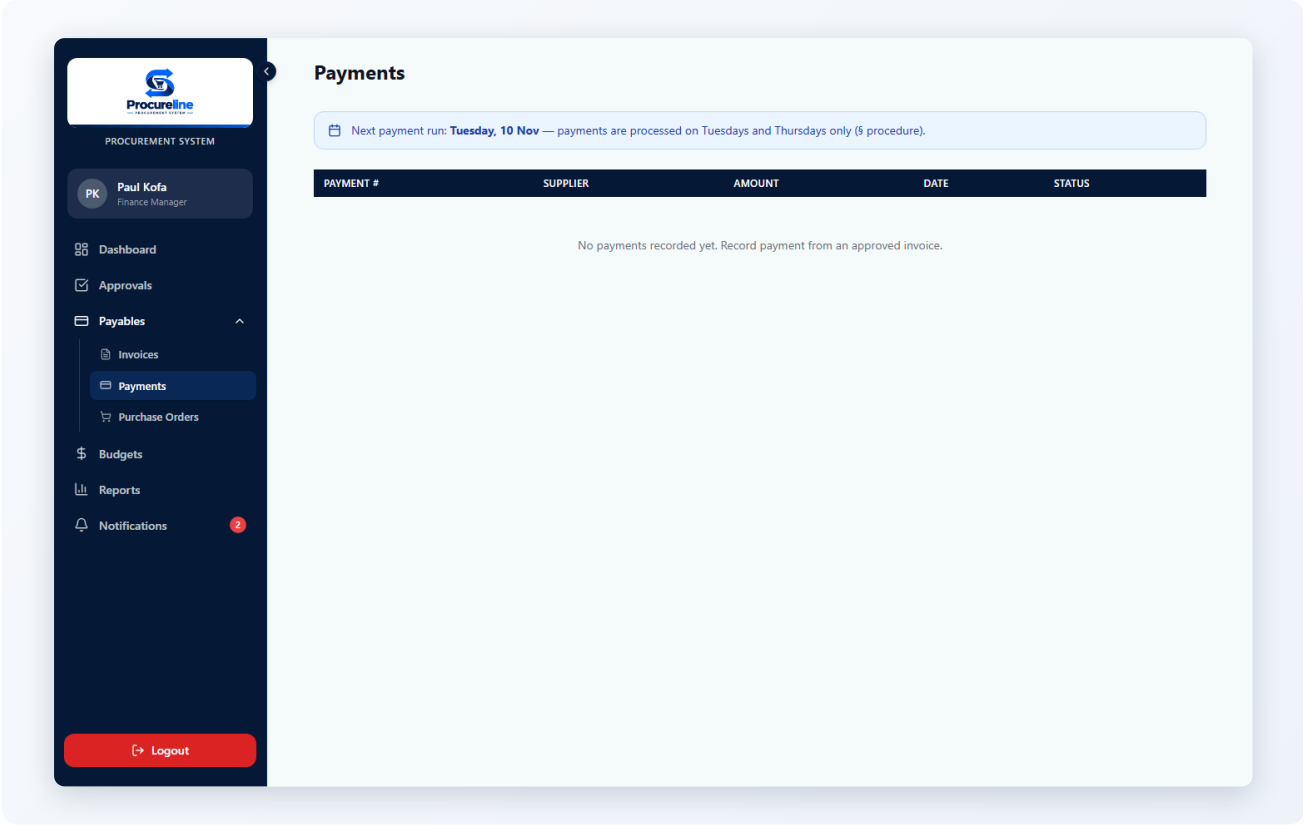

Figure Payments: every payment recorded, with the next payment run shown in the banner.

On an approved invoice click **Record payment**. The payment is recorded as a bank transfer dated today for the invoice amount, the invoice becomes Paid, and the supplier sees it in the payment history on their portal. **Payables › Payments** lists every payment and shows the next payment run; supplier payments are processed on Tuesdays and Thursdays only. Record the payment on the day the transfer is made, not before.

8.4 Budgets

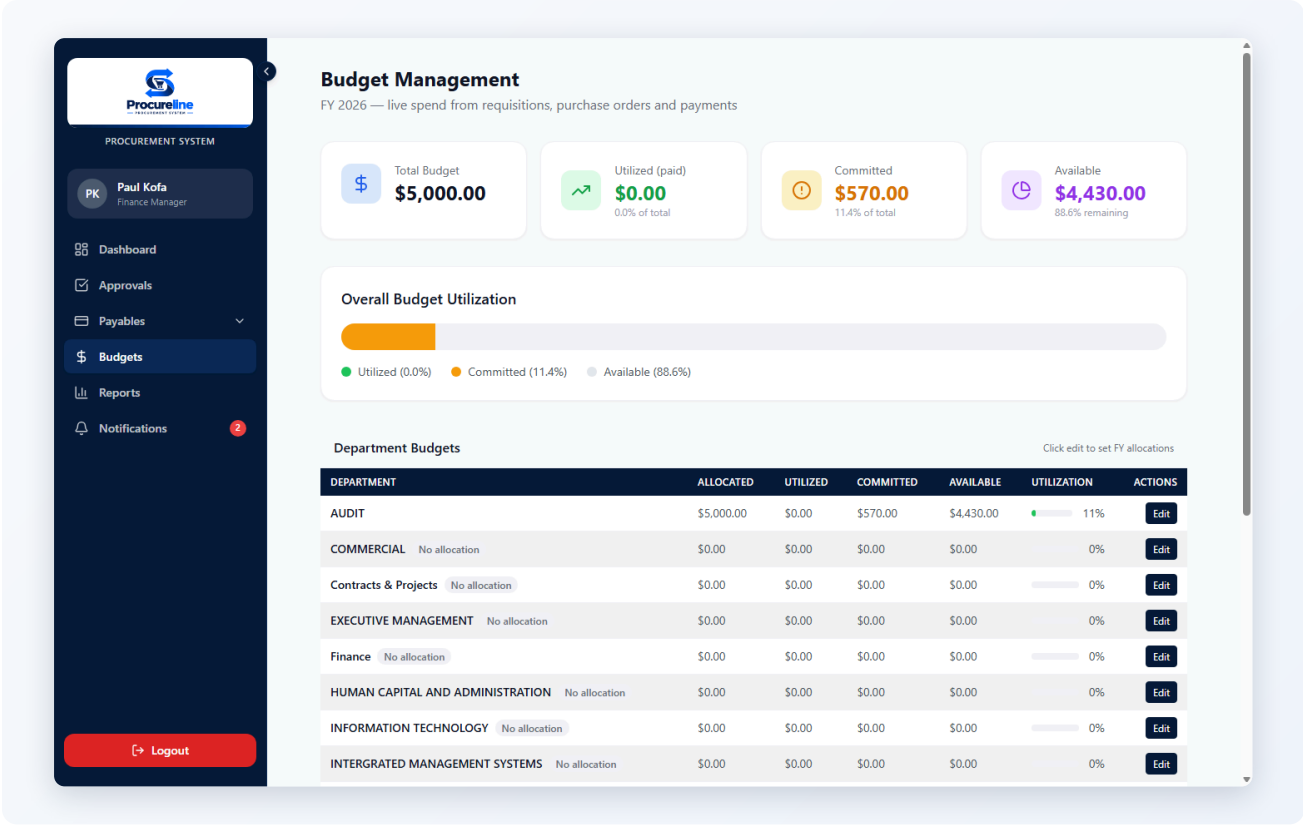

Figure Budget Management: allocation, utilised, committed and available per department, with Edit to set the year's allocation.

Budgets (titled *Budget Management*) shows the financial year's allocation per department against **Utilized** (paid), **Committed** (approved orders not yet paid) and **Available**, with a red banner naming departments that are over budget.

1. Click **Edit** on a department.
2. Enter the **Allocated amount** for the financial year and click **Save**.

   Toast **Budget allocation saved**. From now on a requisition that would take the department over its allocation needs a written reason from its department head, and you are notified of each such approval. Set every department's budget before launch (step 9 of the checklist); a department with no allocation shows *No allocation* and cannot be checked.

PART 9

Administration

The administrator sets the organisation up in Procureline and keeps it tidy: sites, departments, users and their roles, and the audit log. The administrator cannot carry out any business step, which is what makes the audit log trustworthy.

Your dashboard. A system overview, recent activity, and attention rows for suppliers, KYS, evaluations due, low stock and failed sign-ins.

9.1 Sites

Create sites first, because departments, stock and deliveries refer to them. Open **Organisation › Sites** and click **Add site**: a short **Code** (such as `HQ`, locked once saved), the **Type** (HQ or Site), **Name**, city and province, and tick **Has local store inventory** for any site that holds its own stock. Stock transfers (4.6) move stock between sites that have inventory.

9.2 Departments

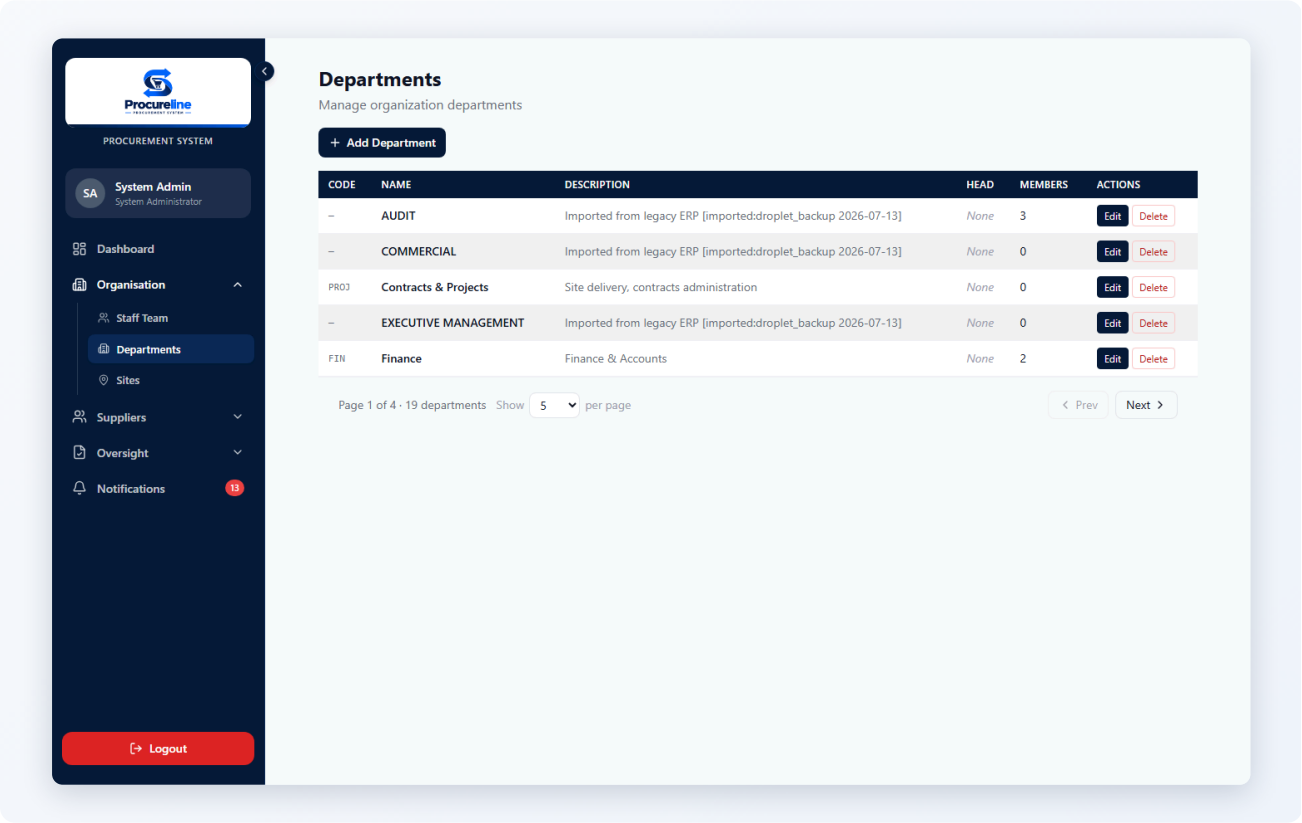

Figure Departments: code, name, head and members; Add Department opens the form.

Open **Organisation › Departments** and click **Add Department**: **Department Name** (required), a short **Department Code**, a description, the **Department Head** and a **Deputy HOD**. Both lists offer only users with

the Department Head role, so create those users first (9.3) or come back and edit. The deputy can approve the department's requisitions when the head is away; name one for every department so approvals never stall. Create a department called **Procurement**: its head is the Head of Procurement.

9.3 Staff Team (users)

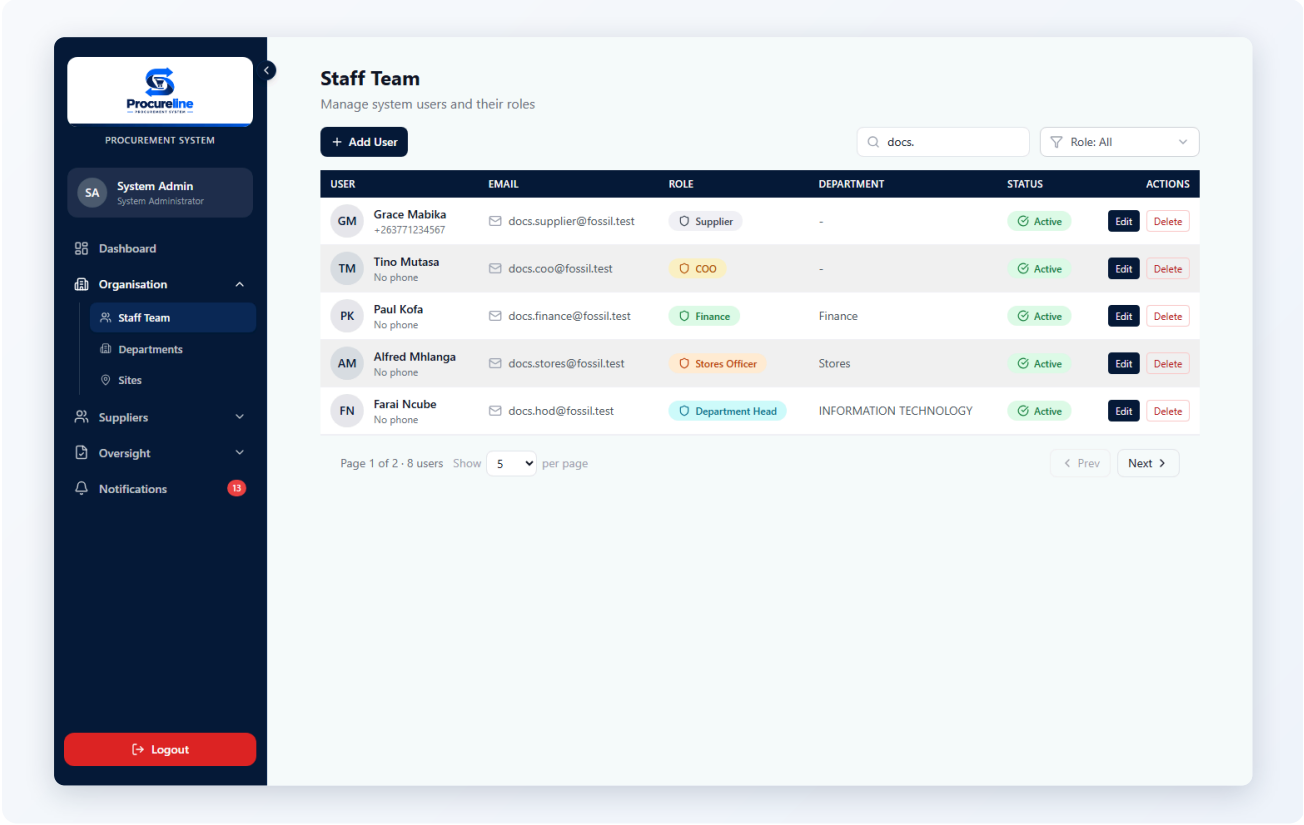

Figure Staff Team: each user with role, department and status; Add User opens the form.

1. Open **Organisation › Staff Team** and click **Add User**.
2. Enter **First Name**, **Last Name** and **Email**. Use the person's real work address: sign-in codes and every notification go there, and the email cannot be changed later. Set a **Password** of at least 6 characters and confirm it; the user should change it at first sign-in.
3. Choose the **Role**: Admin, Procurement Officer, Department Head, End User, Finance, COO or Stores Officer. Set the **Department** for everyone who raises or approves requisitions; a Department Head whose department is Procurement becomes the **Head of Procurement**, with full procurement access plus award authorisation and waiver approval. Add a phone number and leave **Status** as Active.
4. Click **Create User**.

   Toast **User created successfully**. The user signs in at your organisation's address (1.2). To change a role or deactivate someone, click **Edit**; set **Status** to Inactive or Suspended rather than deleting, so their history stays attributed. Supplier logins are not created here; suppliers register themselves or are created by Procurement (6.1).

> **One person, one role.** Give nobody two logins to get around a control. The two-person rules (awards, bank changes, activations) assume the submitter and the approver are different people, and the audit log records the account, not the person at the keyboard.

9.4 Organisation settings

Open your profile from the card above the menu. The panel **Business unit settings** (Procureline's name for an organisation's settings) shows the organisation's code, country, base currency, the **COO approval limit** with the exchange rate it is applied at, and the document branding (legal name, VAT number, address, logo) printed on orders. These are read-only here; changes to the currency, limit, exchange rate or branding are made by the Procureline operators. Before launch, confirm the limit matches your delegation of authority (step 6 of the checklist). The warning *No exchange rate on file — every PO routes to the COO* means exactly that for an organisation whose currency is not USD.

9.5 Audit log and evidence pack

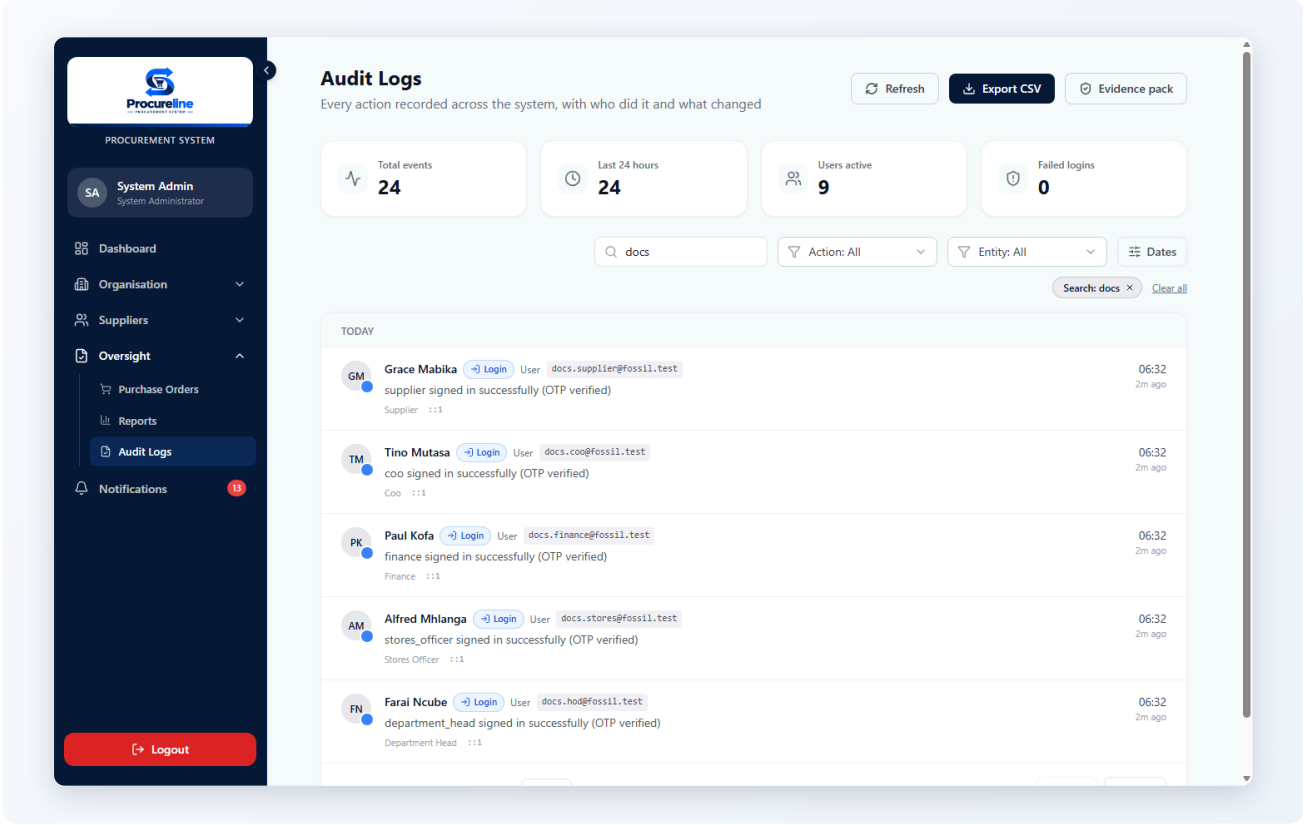

Figure Audit Logs: every action with who did it, filtered by action, entity and date; Export CSV and Evidence pack at the top.

Oversight › Audit Logs records every sign-in, failed sign-in, create, update, delete, approval, rejection, submission, upload and download, with the user, role, time, IP address and the fields that changed. Search by description, user or IP; filter by action, entity and date. Click an entry for **Audit Log Details**, including before and after values. `Export CSV` exports the filtered list; `Evidence pack` produces the controls evidence for auditors for the date range (default the last twelve months). Check the log daily during the first weeks (Launch Manual 1.7); the hourly jobs appear in it when they run.

9.6 Reports

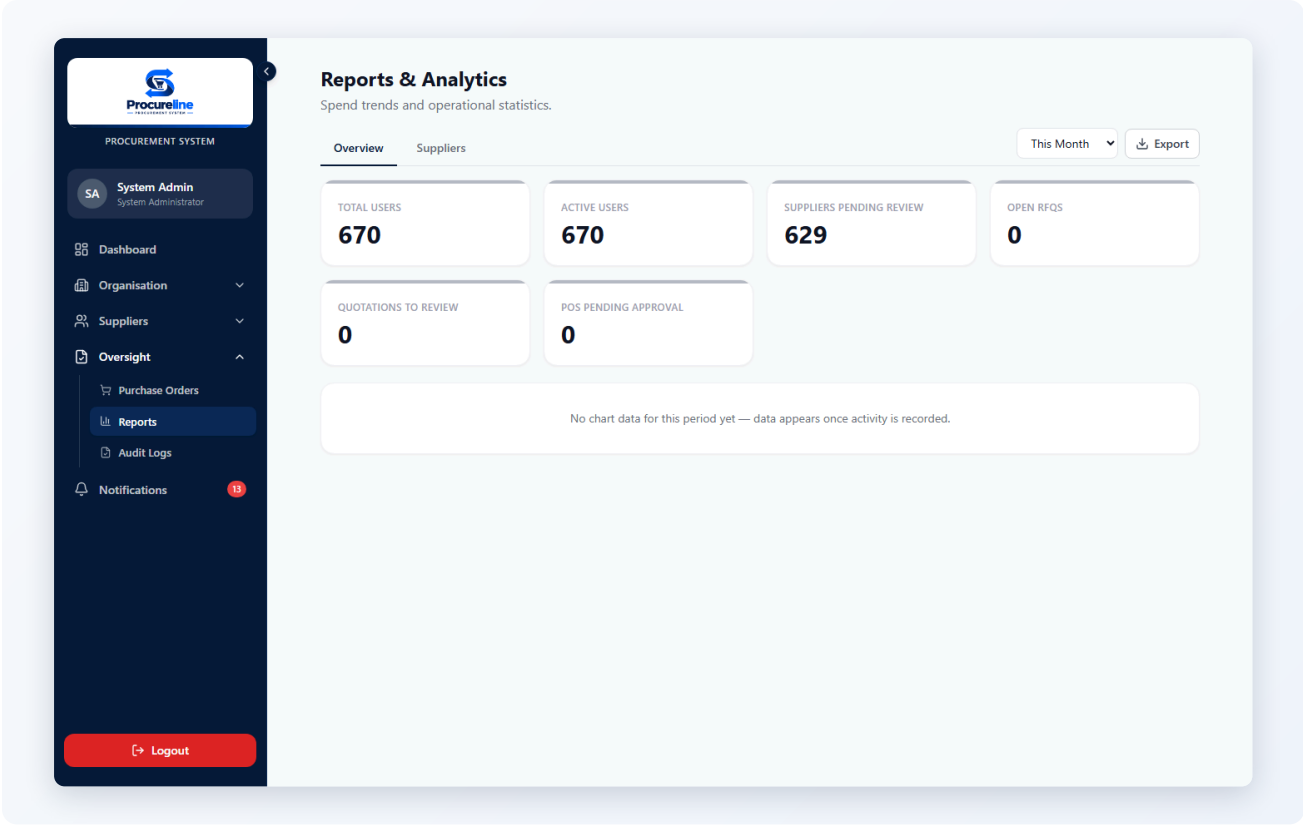

Figure Reports & Analytics: the Overview tab with period selection and Export; the Suppliers tab holds the supplier registry.

Oversight › Reports shows spend trends, department spend and order value by status for the week, month, quarter or year, with `Export` to CSV. The **Suppliers** tab is the supplier registry with KYS, scores, orders and spend. Reports are available to every staff role except end users.

PART 10

For suppliers

This part is for supplier companies. You register once with each organisation you supply through Procureline, upload your compliance documents, quote online, acknowledge orders, follow deliveries and invoice from the same place. You see only your own records.

Your menu. Bidding (My RFQs, Submitted Quotations), **Orders** (Purchase Orders, Deliveries, Invoices) and **Account** (Company Profile, KYS Documents), plus Notifications. Your dashboard shows open RFQs, orders and invoices at a glance.

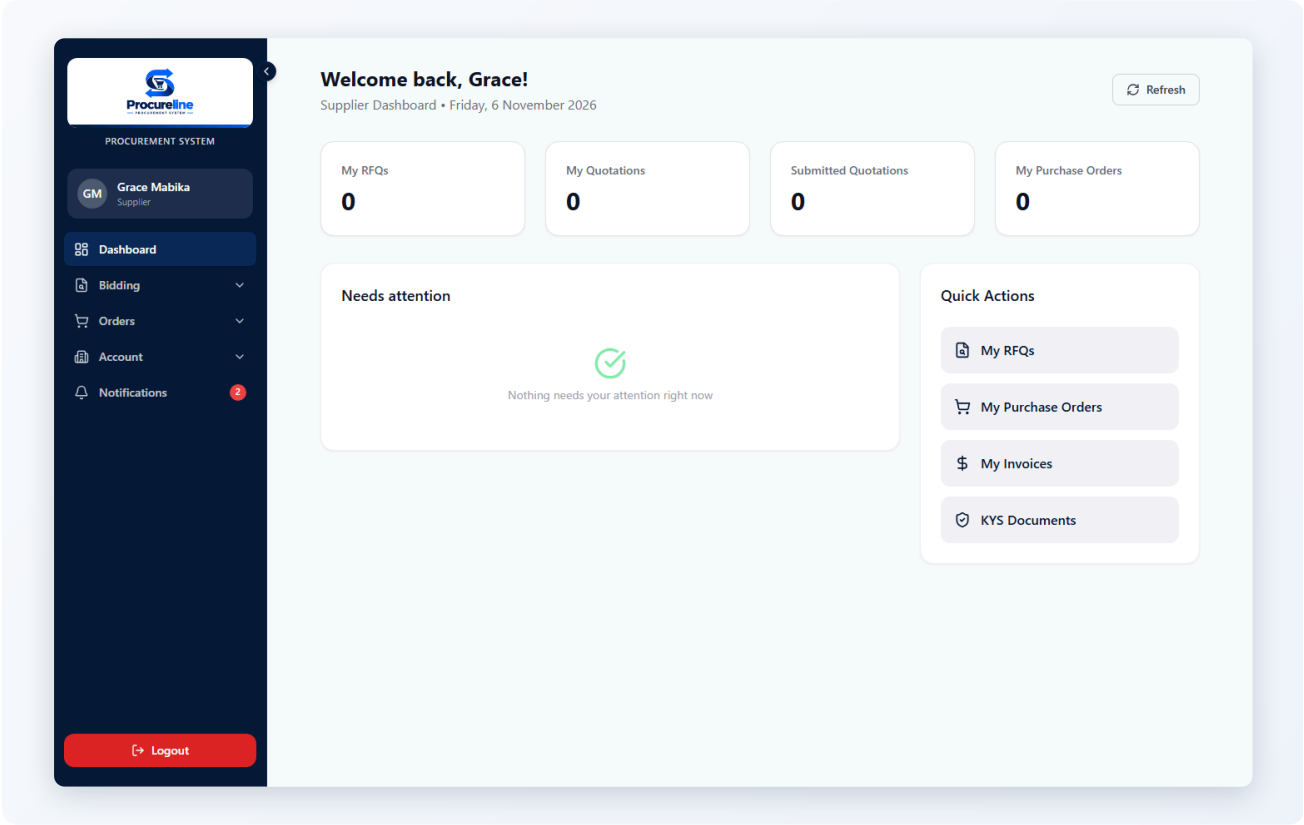

Figure The supplier dashboard: RFQs, orders and invoices at a glance, with the supplier menu on the left.

10.1 Register your company

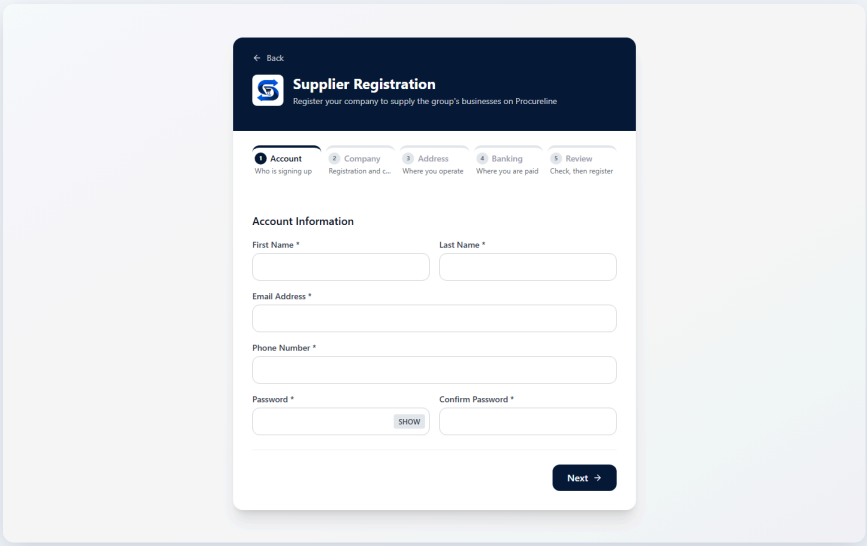

Figure Supplier Registration: Account, Company, Address, Banking, Review.

1. Open the buyer's Procureline address and click **Register your company** under the sign-in box. The form has five steps: **Account**, **Company**, **Address**, **Banking**, **Review**.
2. **Account.** Your name, **Email Address**, **Phone Number** and a password of at least 6 characters. The email is your sign-in and receives every code and notice; the phone number is the one Procurement will call to confirm bank details.
3. **Company. Company Name** and **Registration Number** are required. Add trading name, VAT number, business and entity type, and the **Product/Service Categories** you supply; categories are how you get invited to RFQs.
4. **Address** and **Banking.** Your business address and country, and the bank account you want to be paid into.
5. **Review** and click **Complete Registration**.

   The page says **Registration Successful!** and that your account is pending approval. Sign in (1.2) and go straight to KYS Documents. If the page says *This company is already registered*, sign in with the existing login or contact the buyer's Procurement team.

10.2 Upload your KYS documents

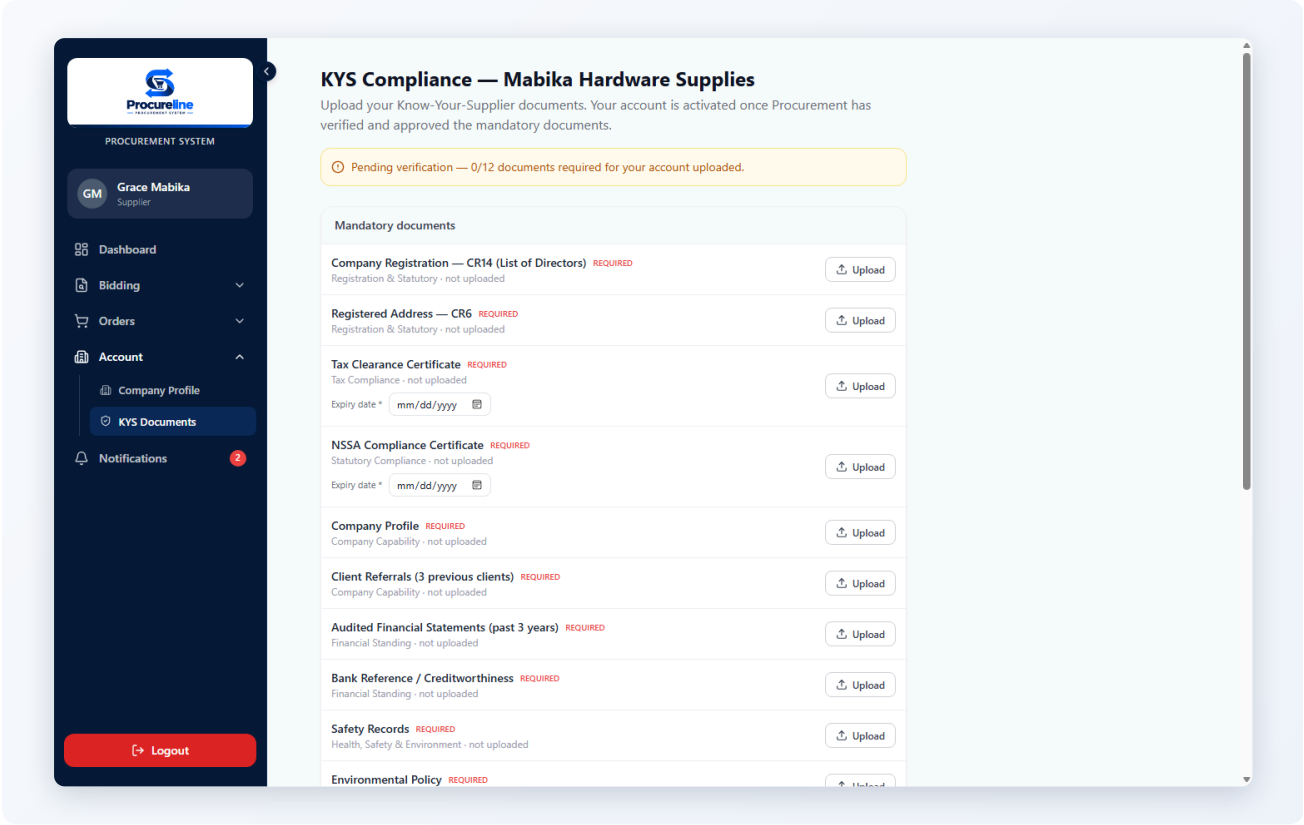

Figure KYS Documents: the banner says where you stand; each mandatory document has Upload and, where needed, an expiry date.

Open **Account › KYS Documents**. The banner at the top says where you stand; the list is split into **Mandatory documents** and **Optional documents**.

1. For each mandatory document click **Upload** and choose the file (PDF, image, Word or Excel, up to 5 MB).
2. Where the row asks for an **Expiry date** (tax clearance, NSSA, insurance, ISO, licences, NEC) enter it before uploading; it must be a future date.
3. Watch the row: *awaiting review* becomes *verified* when Procurement has checked it, or *Rejected* with the reason, in which case **Replace** it.

When Procurement has everything, it puts your account forward for activation and a manager approves it. The banner then reads **Your account is active and verified** and you are emailed. Until then you can still be invited to quote, but you cannot be awarded work.

MANDATORY FOR EVERY SUPPLIER	ALSO MANDATORY FOR CRITICAL, STRATEGIC AND UNCLASSIFIED SUPPLIERS
Company Registration CR14 (list of directors); Tax Clearance Certificate	Registered Address CR6; NSSA Compliance Certificate; Company Profile; Client Referrals (three previous clients); Audited Financial Statements (past three years); Bank Reference; Safety Records; Environmental Policy; Insurance Coverage; Disaster Preparedness Plan

MANDATORY FOR EVERY SUPPLIER	ALSO MANDATORY FOR CRITICAL, STRATEGIC AND UNCLASSIFIED SUPPLIERS
Tactical suppliers need CR14, CR6, Tax Clearance, NSSA and Insurance. NEC registration, industry licences and ISO certification are optional unless Procurement asks for them. Keep expiring documents current: reminders come 60, 30 and 7 days before expiry, and an expired mandatory document stops new awards until it is replaced	

10.3 Your company profile and bank details

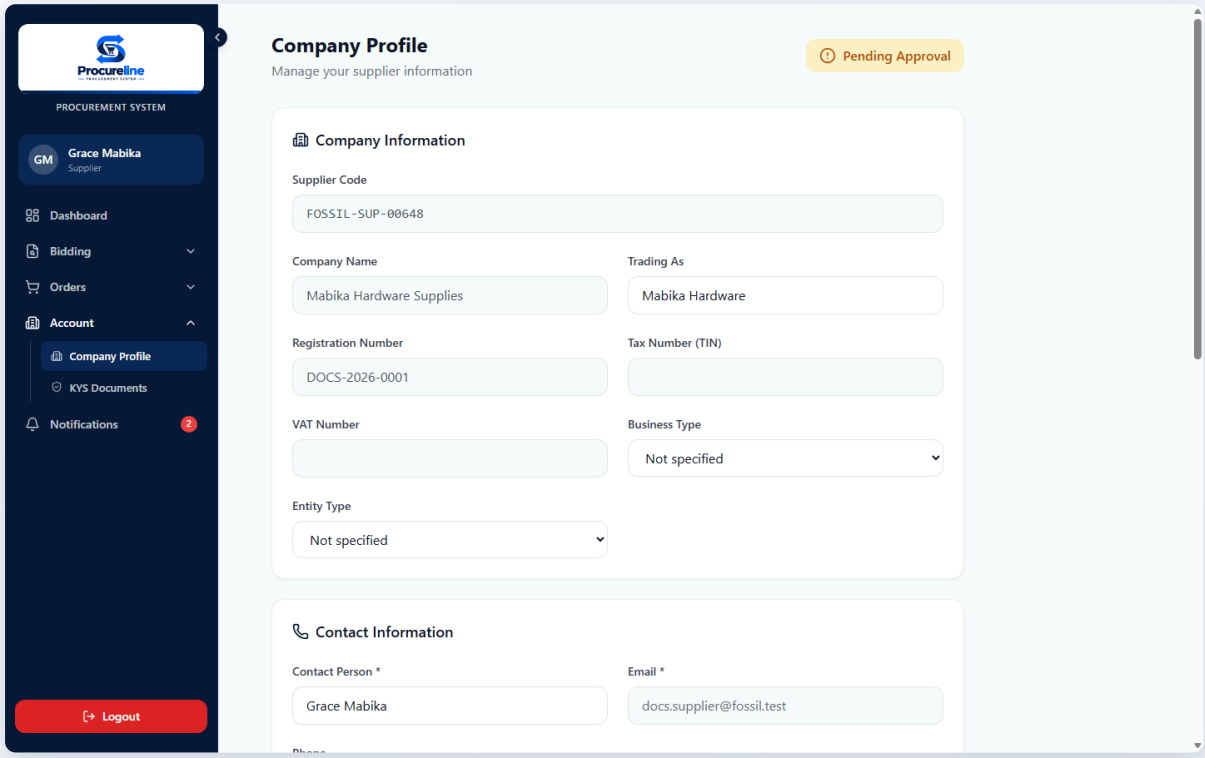

Figure Company Profile: your supplier code and account status at the top, bank details at the bottom.

Account › Company Profile shows your **Supplier Code**, your permanent number on the buyer's register, and the status badge of your account (10.8). Company name, registration, tax and VAT numbers can only be changed by Procurement. You can update your contact person, phone, address and **Service Categories**, and click **Save Changes**.

Changing bank details. Edit the **Bank Details** section and save. The change does not take effect at once: the page says it *needs verification and approval*. Procurement will telephone a number already on your record, then a second person approves. The status line under Bank Details tells you where it is: waiting for the call-back, confirmed by phone, approved, or not approved. Payments to you are held while the change is open, so make the change well before an invoice falls due, and make sure the phone number on your profile is answered.

10.4 Quote on an RFQ

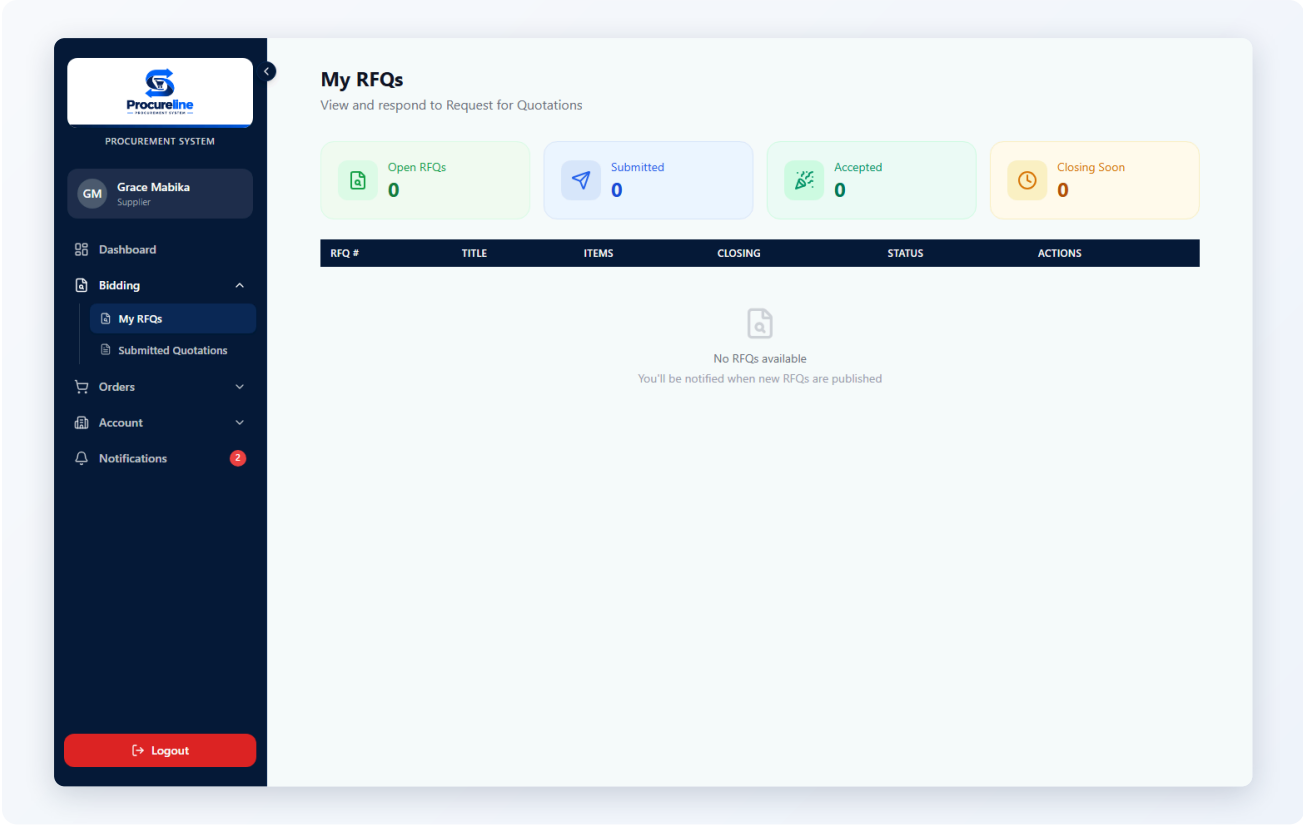

Figure My RFQs: open invitations with the closing time; Submit Quote appears while an RFQ is open.

1. You are emailed *New RFQ* when a buyer invites you. Open **Bidding › My RFQs**; the row shows the closing date and time remaining. Click **View** to read the items, specifications, delivery requirements and terms; any equipment photos the requester attached are shown with the line.
2. Click **Submit Quote**. The drawer has three steps: **Prices**, **Terms**, **Review & submit**.
3. **Prices.** Choose the currency, then enter a **Unit Price** for every line and the **Brand**. If you are offering an equivalent rather than the exact part, tick *I am offering an equivalent / alternative part*, say what it is and its part number, and attach photos. Lines you cannot supply still need a price to submit; say so in the notes.
4. **Terms. Delivery (Days)**, **Payment Terms** (cash, net 7, 14, 30 or 60), **Valid For (Days)** and any notes.
5. **Review & submit.** Check the grand total, then click **Submit Quotation**. Once submitted, a quotation cannot be edited.

Toast **Quotation submitted successfully**. Your bid is sealed: nobody at the buyer can see it until the RFQ closes. Follow it under **Bidding › Submitted Quotations**: **Submitted**, **Under Review**, then **Accepted** or **Rejected**. If Procurement asks for a *price revision*, the RFQ shows a banner; submit a new quote, which replaces the old one.

10.5 Acknowledge a purchase order

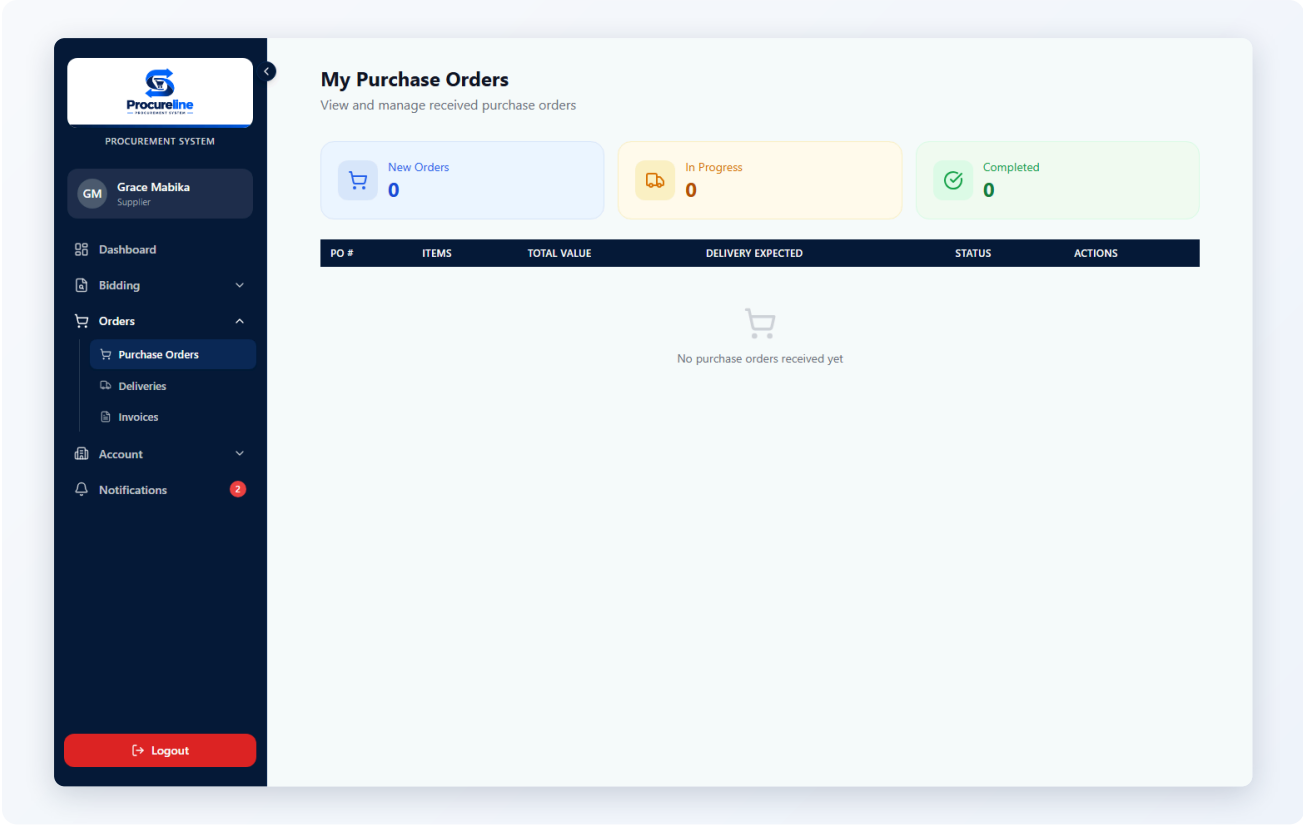

Figure My Purchase Orders: new orders show Acknowledge; acknowledged ones show Submit invoice and Manage Delivery.

1. When an order is fully approved you are emailed the order PDF. Open **Orders › Purchase Orders**; new orders show `Acknowledge`.
2. Click it, add your **Delivery Note Number** and **Expected Delivery Date** if known, and click **Confirm Acknowledgment**.
3. Open the order for the full detail and `Download PDF`.

   Toast **Purchase order acknowledged — next, deliver the goods**. The order is now issued, the buyer's Stores expects the delivery, and **Orders › Deliveries** shows it as pending. Acknowledge promptly: the buyer is told when you do, and an unacknowledged order is one the buyer will chase.

10.6 Deliveries

Deliver with a delivery note quoting the order number. Stores counts and inspects the goods and raises a goods received voucher (GRV). **Orders › Deliveries** shows each delivery with its GRV number and status: *Pending*, *Received*, *Accepted*, *Partially accepted* or *Rejected*, and the quantities received and rejected per line. You are notified of what was accepted and rejected on every GRV. Faulty goods are returned within five days of delivery. Deliver the balance of a short delivery on a new delivery note; it gets its own GRV.

10.7 Submit an invoice and get paid

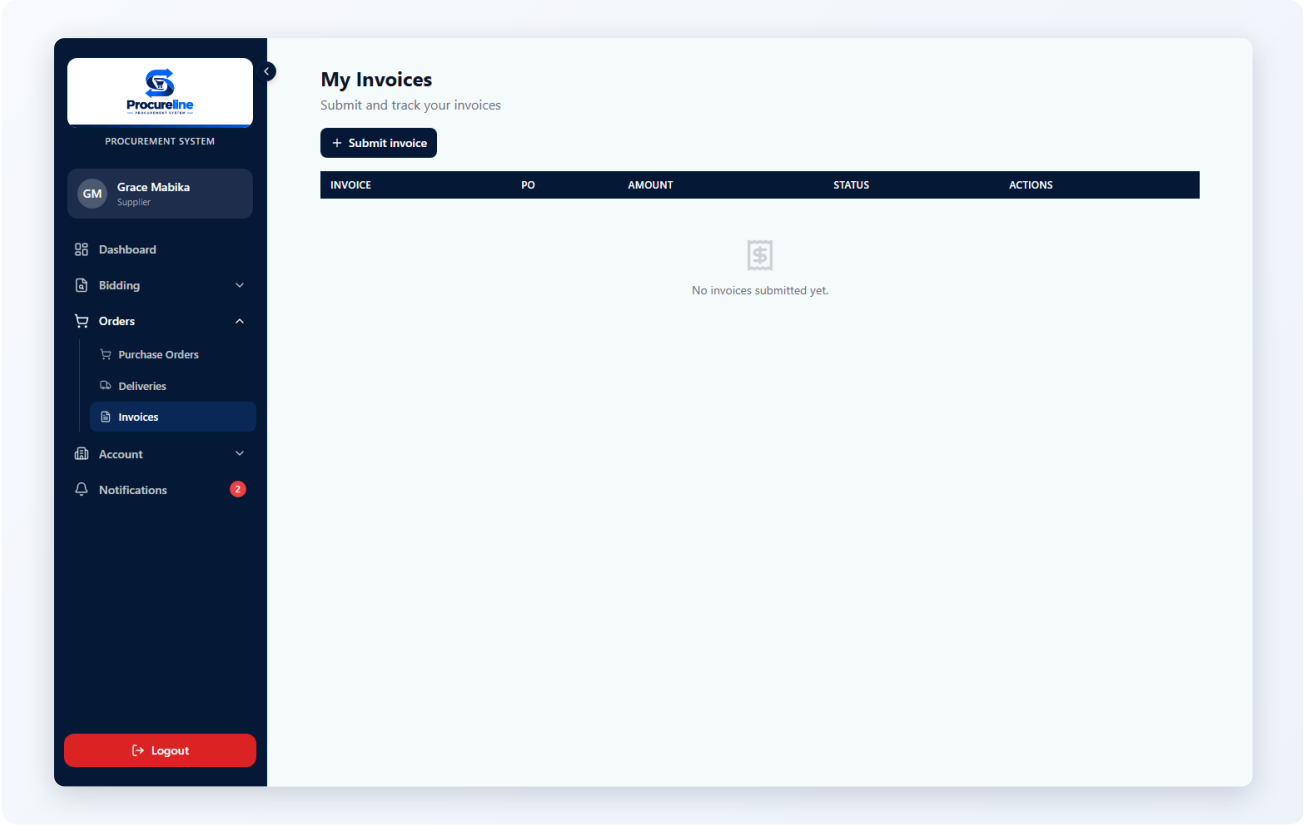

Figure My Invoices: each invoice with its status from Submitted to Paid; Submit invoice opens the form.

1. Open **Orders › Invoices** and click **Submit invoice**. Three steps: **Order & invoice**, **Lines & VAT**, **Review & submit**.
2. **Order & invoice.** Pick the **Purchase order** (only issued orders with goods received are offered), enter **Your invoice number** and the **Invoice date**.
3. **Lines & VAT.** The lines come from the quantities Stores received, not from the order. Charge the same VAT as the order carries, or the invoice will not match.
4. **Review & submit.** The page compares the order and your invoice and says whether they match. Click **Submit for three-way match**.

   Toast **Invoice submitted successfully**. Finance matches it against the order and the GRVs. The status moves from Submitted to Approved and then Paid; Variance means Finance is looking at a difference, and Rejected shows the reason, after which you submit a corrected invoice. Open an invoice to see the **Payments** table with the date, method and reference of each payment, and the balance due. Payment runs are on Tuesdays and Thursdays.

10.8 What your account status means

BADGE ON COMPANY PROFILE	MEANING	WHAT TO DO
Pending Approval	Registered; documents not yet complete or not yet reviewed	Upload the mandatory documents (10.2)

BADGE ON COMPANY PROFILE	MEANING	WHAT TO DO
With Procurement for Approval	Procurement has put you forward; a manager is deciding	Wait; you can still quote
Approved Supplier	Active and verified; you can be invited, awarded and paid	Keep documents current
Registration Not Approved	Your registration was turned down; the reason is on the KYS page	Contact Procurement if you believe it is wrong; it can be reopened
Suspended, Dormant	Set aside by Procurement with a reason; no new invitations or orders	Contact Procurement
Blacklisted	Removed from the register	Contact Procurement

PART 11

Help

Most problems are one of the following. Your first call is your administrator; a supplier's first call is the buyer's Procurement team. When you report a problem, give the record number (for example REQ-0042 or PO-0017) and what the screen said.

11.1 Common problems

I signed in but no code arrived.

Check spam. The code goes to the address on your user record; if that is wrong, the administrator fixes it under Staff Team. Codes expire after 10 minutes; click **Back to sign in** to get a new one. If nobody in the organisation receives codes, email sending has stopped: tell the technical team.

The page says my session is refused or sends me back to sign in.

You are at another organisation's address, or your session expired. Use your own organisation's address and sign in again.

I cannot see a button the manual describes.

Buttons appear only for the role that performs the step, and only when the record is at that step. Check the status badge: the record is still with the person before you. If your role is wrong, the administrator changes it.

My requisition has been "Pending HOD Approval" for days.

The department head has not acted. Their Approvals and Team Requisitions pages mark it overdue. If they are away, the administrator names a deputy on the department, who can approve.

I cannot submit my requisition.

It needs a title and at least one item. A new item not in the catalogue is fine; describe it.

Procurement cannot select or authorise my chosen supplier.

The supplier is not activated, its KYS is short for its tier, or a required document has expired. Open the supplier: the facts strip shows *Spend authorisation* and KYS progress. Complete the file and submit for activation (6.5), or replace the expired document.

The RFQ closed with fewer than three quotes.

A waiver from the COO or Head of Procurement is needed (5.5, 7.3), or re-source with more suppliers invited. Check that invited suppliers can actually sign in; help them register (10.1).

The order went to the COO although it is small.

It is in a currency with no exchange rate on file, so the system routes it to the COO rather than guess. The Procureline operators set the rate (9.4).

Finance cannot approve an invoice.

Either there is no GRV for the goods (Stores must receive them first, 4.3), or the invoice exceeds what was received and not yet invoiced. Reject it so the supplier submits a corrected one.

A supplier says they changed their bank details but payments still go to the old account.

The change is waiting for the call-back or the second approval (6.7). Until it is approved, the old account stands and payments are held.

Stock on the screen does not match the shelf.

A movement was not recorded. Find it in Stock Movements and record the missing issue, receipt or transfer. Do not edit the balance.

No reminders or overdue alerts are arriving.

The hourly jobs are not running on the hosted API. The administrator checks the audit log for the job and tells the technical team (Launch Manual 1.2, item 6).

A supplier cannot register: "This company is already registered".

A record with that registration number exists, perhaps created by Procurement. The supplier signs in with that login or uses `Forgot password?`; otherwise Procurement looks the record up by registration number.

11.2 Glossary

TERM	MEANING
Activation request	A pending supplier put forward by Procurement for a second person to approve. Open until approved, returned or rejected
Award	The decision to buy from a supplier's quotation, in full or line by line
Business unit	What Procureline calls an organisation it serves: its own address, its own database and its own settings
COO limit	The order value in US dollars at or above which the COO must approve. The default is USD 5,000
CR14 / CR6	Company registration forms: the list of directors (CR14) and the registered address (CR6)
Deputy head	A user who can act for a department head on that department's requisitions
GRV	Goods received voucher: the Stores record of what physically arrived
Head of Procurement	The department head of the Procurement department. Authorises awards and gives the first approval on orders
IR	Internal requisition: a requisition as seen by Stores during stock review
KYS	Know Your Supplier: the due diligence checklist a supplier must pass before it can be paid
MSDS	Material safety data sheet, required for hazardous goods
NSSA	National Social Security Authority; its compliance certificate is a KYS item
PO	Purchase order: the commitment to buy, sent to the supplier after approval
Requisition (PR)	A request from a department for goods or services

TERM	MEANING
Rejected (registration)	A supplier registration turned down with a reason. The company cannot quote or be awarded; the registration can be reopened. Not a blacklisting
RFQ	Request for quotation, sent to invited suppliers
Sealed bid	A quotation nobody can see or compare until the RFQ closes
Spend-authorised	A supplier whose activation has been approved and who may receive awards and orders
Store requisition	A department's request to collect issued or delivered goods from Stores
Supplier code	The permanent register number given to a supplier on first save, such as ORG-SUP-00042
Three-way match	Comparing the order, the goods received and the invoice before payment
Tier	A supplier's risk class (critical, strategic, tactical, transactional, unclassified), which sets the depth of its KYS and how often it is reviewed
Two-person rule	A control that needs two different people, one to propose and one to approve: awards, bank-detail changes and supplier activation
Waiver	Approval to award with fewer than three quotations, with a reason from a fixed list
